This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

ss without any recommendation on the part of this Depart-
show that the total expenditures are largely in excess of the
bsolutely necessary for the actual requirements of the Army

specially to this subject in order that it may be understood
eat part of the money appropriated for this Department by
is for expenditures similar to those named, and should not be
l as required for the support of the Army, but arises from the
osed upon the military branch of the Government in the execu-
rks of internal improvement, for the benefit of the people.

of March 3, 1873, for the establishment of a military prison,
ppropriation to meet any of the expenses necessary to carry it
. In order, however, that no time might be lost, a preliminary
nposed only of Army officers, was constituted to collect infor-
d material for commencing more definite labor upon the plan
Congress should appropriate the means. This board, in its
ions, has succeeded in doing even more than was anticipated;
nately, two gentlemen from civil life, who have devoted much
zealous study to the subject of reformatory prison discipline,
found willing to give a share of their time gratuitously, until
priation shall be made, to the work of preparing a plan and
s for the military prison. This has enabled me to carry out
ions of the second section of the act, by appointing the board
escribed. Their report will form the subject of a future special
ation to Congress.

y difficult, under existing laws, to supply the Army with field-
, two of which are allowed to each company. As this is an
art of the military establishment better facilities for obtaining

apparent was it during the past fiscal year that the appropria-
r barracks and quarters would not admit of any expenditure from
propriation beyond the payment of rent of offices and hire of
s for troops, that it was found necessary early in the spring to
y arrest any work upon the repair and construction of barracks
arters. Notwithstanding this necessary and sharp measure,
involved much inconvenience to the troops, crowded into build-
uch in need of repair, or cantoned in tents and huts too much
d to the inclemency of the weather, the liabilities have to a small
t exceeded the sum appropriated.

necessary that I should ask the attention of Congress to the dif-
es of keeping accounts, and of paying for supplies and services,
arise under the operation of the act approved July 12, 1870. The
its operation requires every disbursing officer to keep a separate
istinct set of accounts under every head of appropriation, and to
a balance of money on hand to meet the demands under each
thereby compelling officers to keep to their credit at depositories
larger balances than heretofore. A remedy for this is to make
propriation for the Quartermaster's Department under one head
ingle appropriation, requiring, as now, that the estimates upon
the appropriation is based shall be submitted in detail. No ben-
arise in practice from the system of keeping separate heads of
riation in this Department, while its existence gives many occa-
r error and mistakes, and is a burden upon the officer who is
d to disburse the public money, as well as upon the Treasury.
ls of the present system are fully set forth in the report of the
tee on Expenditures in the War Department, made to Congress
st session.

any lieutenants of the line are often required to assume the
nd responsibilities of acting assistant quartermasters, it is
nded that an allowance of $10 per month be made by law to

he expenditure of the money, and that the small force that
ter be required at that place could, economically, be provided
ed or leased buildings. I recommend that the sum appropri-
ed for the rent or purchase of such sites of posts in Texas as
und to be actually needed for military purposes.

ort of the Commissary-General shows that the average cost of
-ration for the year has been seventeen cents and forty-eight
s, showing a trifling increase in cost over that of the previous

ommended that an act be passed authorizing the issue of to-
enlisted men of the Army, as a component part of the Army-
near as may be in amount to that authorized to be sold to

the act approved March 3, 1873, to provide for the better care
ection of subsistence supplies, there have been appointed one
and forty-nine commissary-sergeants, who have been assigned
ry posts. A considerable number of them have been in the per-
of their duties a sufficient time to evidence to the Department
fit that was anticipated from a body of experienced and worthy
missioned officers being in charge of this class of public prop-

es against deterioration, whether from bridging or other
n the geodetic and hydrographic survey of the lakes; upon
the defenses of the coasts; upon military surveys and recon-
in the interior; upon geographical and geological explora-
n public buildings and grounds in the District of Columbia;
onstruction of light-houses, and upon the demarkation of the
between the United States and Great Britain.

ks projected and approved for the modification and strength-
our sea-coast defenses and fortifications have been advanced
pidity consistent with economy and efficiency, and the works
incipal harbors now contain quite a number of platforms ready
armaments of guns of the largest calibers. Heavy guns
in covered positions, along the shores of the inlets to our har-
st always be the basis of any successful defense, and the works
l and in course of construction should be prosecuted to comple-
l be suitably armed.

attalion of Engineers numbers 308 enlisted men, and is stationed
ilitary Academy for instruct on of cadets, and at Willet's Point,
ork Harbor, where it forms the school of torpedo defense of the
ls to our harbors, and the guards and workmen for the care and
ation of engineer-equipments. During the past summer a num-
letachments have served with advantage in the geographical and
ic explorations. The appropriations asked for the engineer depot
st are recommended to Congress, and the recommendation for
hief musician and two principal musicians for the battalion ap-
d.

th the small appropriations granted for trials with torpedoes,
nvestigations upon this subject have been continued, to the benefit
r system of submarine mines. This accessory for the defense of our
ors in recent years has developed into one of great importance
g the maritime powers, and to investigate the recent electrical
ods and systems of torpedoes, as well as to procure certain materials,
fficers of engineers were sent during the summer to Europe. The
ts of their mission are the collection of valuable information on
subject, and a saving of expenditure to the Government.

e river and harbor improvements mentioned in my last annual re-
have been continued, and the works and surveys connected there-
have been carried on during the past year with vigor. Detailed
mation in regard to each specific improvement, and the results of

ction of bridges, my attention has been called to the fact
bridges have been built, and that one is now being con-
ross navigable waters of the United States without any
f law; and further, that certain parties claim the right to
that one of those parties is now constructing a bridge under
laimed to be derived from acts granting right of way for
hrough public lands and granting lands to aid in the con-
f a road chartered by State authority. In view of the pro-
the more recent acts of Congress requiring the Secretary of
aintain a supervision over the location and construction of
ossing navigable waters of the United States, in order that
sts of navigation shall be protected, I feel it my duty to invite
ion of Congress to this subject and to suggest such general
as may be deemed necessary for the preservation of the great
hannels of commerce.

connection I have respectfully to recommend that the act
ng the construction of a bridge across the Arkansas River at
ck, Arkansas, approved May 31, 1872, be repealed, for the rea-
a bridge constructed in compliance with its terms would mate-
struct and impair the navigation of the river. A previous act
ress (that of July 1, 1870) contains all the provisions for bridg-
river at Little Rock essential to the preservation of the channel.
urvey of the lakes has been continued with success during the
The survey of Lake Michigan has been pushed forward nearly
letion, and that of the Saint Lawrence River has been extended
o Lake Ontario. Other portions of the survey are in satisfac-
gress; new surveys of special localities have been made, the
of important points determined by telegraph; assistance to
graphical and geological survey of adjacent States rendered;
orological and lake-surface observations continued through the
ke region.

ain field operations of the geological exploration near the
parallel, between the Sierra Nevada and eastern slope of the
ountains, were completed in November last, and the maps and
re being prepared for publication at an early day. Special ex-
ns, giving important results, have been made of noted geologi-

rmal preliminary action of the city authorities of Port Huron
et been completed.

ort of the Chief of Ordnance calls attention to the many po-
ments so often presented in favor of the repeal of the law pro-
promotions in the corps which he represents. He refers to the
and humiliation to which officers of merit and long service
n subjected since the passage of that law, by being deprived
leserved promotion, the only reward held out in their profession
s of duty well performed. Their claims to promotion appeal
to the attention of Congress.

rd of experienced officers, of which Gen. A. H. Terry was
t, was convened in September, 1872, for the selection of a
oading system for the muskets and carbines of the military serv-
ter an exhaustive trial of all the systems presented, the board
the Springfield breech-loading system as the one, of all those
before it, which is best calculated to meet the demands of our
service.

port of the board was approved, and the Springfield system of
oader will henceforth be used for the muskets and carbines of
y. At the same time the caliber of all small-arms for the serv-
es, carbines, and revolvers—has been fixed at .45 of an inch.
a question of grave importance whether new arms of the ac-
ystem shall not be made at once in sufficient quantities for a
supply in case of war, and to this end an appropriation of
has been asked for the next fiscal year for the manufacture,
with the materials now on hand, of about 35,000 arms.

nnual appropriation of $200,000 for arming and equipping the
an amount fixed by Congress during the early part of the cen-
now found inadequate, by reason of the great increase of popu-
o supply the wants of the whole body of the militia, and it is
recommended that the appropriation for that purpose be in-
in a manner proportioned to the increase of the population
passage of the act of 1808, providing for the distribution of

endation made for its disposal as a part of the public domain.
nt to such recommendation the exigencies of the service re-
at the property should be used by the Quartermaster's Depart-
military purposes, and the period when such necessity shall
exist is very indefinite. Under these circumstances the repeal
ch of the act of June 10, 1872, as relates to the sale of this
is recommended.

ortion of the same act which directs the sale of the Apalachi-
nal should, in my opinion, be repealed, for the reason that the
was granted to the State of Florida in 1870, by the act ap-
December 15 of that year, under the name of the Chattahoochee

Department feels much embarrassment arising from conflicting
founded on alleged infringements of patent-rights in the con-
on of breech-loading guns at the national armory. Officers of
lnance Corps, in the execution of their official duties, are seriously
d by private actions for damages, instituted by persons claiming
l valid patents which have been infringed in the productions of
vernment armory, and some legislation seems to be required in
to enable the Department to dispose of the claims.

fifth section of the act of July 12, 1870, which provides "That
ances of appropriations contained in the annual appropriation
nd made specifically for the service of any fiscal year, and remain-
expended at the expiration of such fiscal year, shall only be
l to the payment of expenses properly incurred during that year,
he fulfillment of contracts properly made within that year, and
alances not needed for the said purposes shall be carried to the
s fund: *Provided*, That this section shall not apply to appropria-
nown as permanent or indefinite appropriations," is injurious to
terests of the Government where permanent buildings are to be
l, and appropriations for this purpose should be allowed to run
ree years instead of one, as now limited by that act. It s recom
d that the act be modified accordingly.

ematic and continuous instruction of the Army in military signal-
d telegraphy has continued during the past year at the school of

ated for that purpose, and to connect the same with such points be necessary for the proper discharge of the duties of the signal by means of a suitable telegraph-line, in cases where no lines are ation. The plan in contemplation proposes the establishment of stations at life-saving stations and light-houses along the ocean- f New Jersey, from Sandy Hook to Cape May, a distance of five miles from each other. A line connecting the stations at ing stations and light-houses along the coast from Norfolk, Va., e Hatteras, N. C., a distance of one hundred and thirty-seven and on one of the most dangerous coasts of the United States, is constructed. It is expected that the above-mentioned lines will npleted during the present year.

ascertained comparative accuracy of the deductions from reports "probabilities" has been more clearly presented in this than in ding years. The percentage of verifications has been mathemati- computed for each of the geographical districts mentioned in the ts. With a more rigid and scrutinizing mode of calculation than efore adopted, the percentage of verification has improved. The sis of the year's work indicates clearly, at once, the wisdom of ju- usly increasing the number of stations.

e Department acknowledges, as in previous years, the general sup- of the popular opinion of scientific men, and of the press, in its ef- to successfully carry on this work. Errors have occurred, but it een generally recognized as inevitable that some must occur in the nt condition of science. The great utility of the work is no longer ted. It has achieved results, the promise of which, a few years ould hardly be hoped for.

is mentioned in connection with this subject that arrangements been made with the meteorological officers of Russia, England, and ey, to commence on January 1, 1874, an exchange with the United s of the daily reports taken simultaneously at the different stations ghout the great extent of the Russian and Turkish Empires, the h Islands, and the United States. The co-operation of the systems ier nations is expected.

annual inspection of the affairs of the Military Academy and Corps dets, in June last, disclosed a very creditable state of discipline, n attention to study very commendable in the cadets.

e of the effects of the act of Congress approved February 2, 1872, sing the congressional representation of the several States, was rease the Corps of Cadets from 293 to 342. This is of marked ad-

om illness or other cause the Secretary of War is obliged to
rily absent, there is no person in the Department authorized
sign the money requisitions upon the Treasury and other pa-
sary for its current business. In almost all the other Depart-
he Government one or more assistant secretary is provided by
s authorized to perform such duties in the absence of the head
partment. There is no assistant secretary for the War Depart-
d in order that inconvenience to individuals as well as to the
ent may not arise from delay caused by such absence, I recom-
passage of a law which will permit the Secretary of War to
the chief clerk, in case of illness or other temporary absence
ead of the Department, to sign requisitions and other papers
necessary for immediate signature.

refer to the fact that by joint resolution of Congress the Sec-
f War was required to appoint a competent person to arrange
pare for publication the official documents relating to the rebel-
the operations of the Army during the war, and to submit a
said publication and estimates of the cost thereof to Congress
hen next session. A person was appointed to assume this work,
as to receive a compensation of $2,500 per annum. Although
pointment was made at that time, no acceptance was filed, and no
was taken toward the arrangement and publication of the records.
he appointment, under previous legislation, cannot now be made,
reason that the act prescribed that payments should cease in
ears after its passage, this legislation should be revived and the
ary of War authorized to make the appointment. This is a great
al work, of much historical value, and constant daily observation
xperience renders it evident that early steps should be taken to col-
nd prepare these vast and important materials for publication.

WM. W. BELKNAP,
Secretary of War.

be added by way of history of the events during the past

rts of all the department commanders, with the exception of Department of Columbia, not yet received, are also herewith

n States and all the Territories east of Arizona, California, om British Columbia on the north to the Gulf of Mexico Within these limits, which include more than one million of frontier country, are included great agricultural, pastoral, mercantile interests, and also 99 tribes of Indians, number- 2,000 persons, the majority of whom are wild and many of .

rotection to the citizens of the frontier against these Indians l the long line of our Mexican border against robberies by izens and Indians living in Mexico; to explore unknown ter- urnish escorts to surveying-parties for scientific purposes and l railroads; to assist and guard the railways already built and iercial lines of travel; to aid in the enforcement of the civil ote places; and to do generally all that is constantly required ny in the way of helping and urging forward everything s to develop and increase civilization upon the border, and at ime to protect the Indians in the rights and immunities guar- m under existing treaties, has been the work of the troops in ry division for the past year, and that work has been success- mplished.

ctive military forces within the division—a detailed account will be found in the roster appended, marked A—consist egiments of cavalry and seventeen regiments of infantry, ag- 16,459 officers and enlisted men, who are distributed as fol- the Department of Dakota, cavalry, 1,126; infantry, 3,022; epartment of the Platte, cavalry, 1,502; infantry, 2,704; in rtment of the Missouri, cavalry; 1,558; infantry, 1,564; and epartment of Texas, cavalry, 2,491; infantry, 2,492. This force l among 70 military posts, which cover the frontier from Mon- the north to the mouth of the Rio Grande on the south.

g the past year there has been only one change among the de- t commanders. Maj. Gen. Winfield S. Hancock was relieved command of the Department of Dakota on the 3d of December, direction of the War Department, and assigned to the com- f the military division of the Atlantic, and Brig. Gen. A. H. as assigned to duty in his place.

last spring, in consequence of repeated attacks by the Indians post of Fort Abraham Lincoln, I deemed it necessary that a nt of cavalry should be transferred to the Department of Dakota, r that these Indians might be followed and punished, if they enewed their attacks. On application to headquarters of the the Seventh Cavalry was ordered from the Military Division of uth to the Department of Dakota, and, by direction of Gen. A. ry, stationed at Forts Rice and Abraham Lincoln. This transfer ry fortunate, as it afterwards transpired that the authorities of orthern Pacific Railroad desired to continue their surveys, and at it had been determined by the Government to locate the north- undary line, and the services of mounted troops became absolutely ary for these purposes. As soon as the directors of the Northern Railroad had definitely settled upon their plan of operations for mmer, I deemed it necessary that some point upon the Yellow- should be found near which to establish a depot for supplies, and agreement with Captain Coulson, agent of the contractor for nment transportation on the Missouri River for 1873, to furnish a oat to go from Fort Buford up the Yellowstone River, I sent eorge A. Forsyth, of my staff, to ascend that river, if possible, d fix upon some point near the mouth of the Powder River for this epot. This trip up the Yellowstone was successfully made as far as at point, and a convenient place found for a supply depot, in case one as required. Further explorations have also established the fact that e Yellowstone is navigable for light-draught boats for a considerable istance above the mouth of Powder River, and it is thought that boats an now be run up nearly or quite to the mouth of Big Horn River. pon the completion of this duty, Major Forsyth returned to Fort Rice, here the expedition was being organized for the protection of the surveying parties of the Northern Pacific Railroad; and, upon his report, rig. Gen. A. H. Terry, commanding the Department of Dakota, ordered e establishment of a depot of supplies for the Yellowstone expedion at or near Glendive Creek, where it empties into the Yellowstone, e point at which it was assumed that the surveying parties of the orthern Pacific Railroad would run their line across the river.

This expedition, under command of Col. David S. Stanley, Twentyecond Infantry, left Forts Rice and Abraham Lincoln on the 16th of une, returning to its point of departure on the 21st of September, and ıcceeded in accomplishing the purposes for which it was intended, for e details of which reference is made to the reports of Brig. Gen. A. . Terry and the sub-reports of Col. D. S. Stanley and Lieut. Cols. eorge A. Custer and Luther P. Bradley.

The survey of the northern boundary line has been progressing satisctorily to all concerned throughout the summer, and the troops are ow en route for their winter-quarters at Fort Totten, Dak.

In the Department of the Platte, the troops were increased by the ansfer of the Fourth Infantry from the Military Division of the South. this department all of the troops have been kept actively employed covering the advanced settlements in Nebraska, in Western Kansas ong the line of the North Fork of the Republican River, in Wyoming erritory between Forts Fetterman and Laramie, and along the line of e Union Pacific Railroad. For a detailed account of the operations in is department, I respectfully refer to the accompanying reports of rig. Gen. E. O. C. Ord and his subordinates.

Nothing of unusual interest has occurred in the Department of the issouri. The troops have been kept actively employed in the field for e purpose of intimidating roving bands of Indians, who might be mpted to commit depredations upon settlers and interrupt lines of avel. Brig. Gen. John Pope, in his report, gives a clear and comprensive statement of his year's work, to which reference is respectfully ade.

In the Department of Texas there has been a great deal of trouble ong the northern line of the State, and also along the line of the Rio rande. The troubles on the northern frontier of Texas have been rincipally from Indians coming from the reservations in the Indian Terriry; and I respectfully request that some definite authority be given e to punish these raiding parties of Indians upon their return to their servations. I believe it is the only way in which the evil can be cured.

The people living along the line of the Rio Grande have been heretore frequently plundered by raiding parties of Indians and Mexicans om Mexico. I am happy to state that these depredations have diminhed very materially since the punishment administered by Col. Ranald Mackenzie, Fourth Cavalry, upon a raiding band of Kickapoo and ipan Indians. For the details of Colonel Mackenzie's attack on the ipans and Kickapoos, as well as for a very complete statement of

military affairs in Texas, I respectfully refer to the accompan
of Brig. Gen. C. C. Augur.

It has been found necessary to make extensive repairs at
posts within this division during the year, but only one n
cavalry barracks near Fort Abraham Lincoln, has been ere
siderable money has also been expended in the complet
posts at Beaver City, Utah, and at Fort Clarke, Tex. I
nection I beg leave to call the attention of the General of t
the fact that, while the troops within this division will be
fortably quartered during the winter, they will be inconvenie
at some of the posts within the Departments of Dakota
Platte. Provision will have to be made for thorough rep
Laramie, Wyo., McPherson, Nebr., and Camp Douglas, U
the ensuing summer.

The necessity of keeping Indians on their reservations
more apparent every day, with the westward growth of the
and the rapid progress and development of the mining and
ing interests in the State of Nebraska and the Territories o
and Colorado. During the last twelve months, depredatio
bands of Indians, who, as a general thing, come from som
various Indian reservations within the limits of this comman
exasperatingly frequent. They have attacked our posts,
wounded our citizens and carried off their cattle, and, when
our troops, taken refuge within the line of their reservation
boasted of their atrocities. It seems to me that a rigid ru
made, forbidding their absence from their reservations, and
disregarded it, authority should be given the military to fo
reservation, search out, capture and punish all whom it ca
have been absent from their agencies, and off the reservatio

I respectfully recommend the erection of a large milita
the base of the Black Hills, at some good point to be selecte
In this way we could secure a strong foothold in the heart o
country, and thereby exercise a controlling influence over t
people.

My thanks are due to Generals Pope, Terry, Ord, and
command the four Departments of this Military Division, f
gent administration of their commands, and for the exerci
economy in their estimates for, and expenditures of, public f
the last fiscal year.

I am, colonel, very respectfully, your obedient serva

P. H. SHERI

Lieutenant-General Co

Col. WILLIAM D. WHIPPLE,
Asst. Adjt. Gen., U. S. A., Washington, D. C.

REPORT OF BVT. MAJ. GEN. JOHN POP

HEADQUARTERS DEPARTMENT OF THE MISS
Fort Leavenworth, Kans., Octob

COLONEL: I have the honor to submit the following rep
in this department for the past year:

I am glad to be able to say that, with very trifling except
no difficulties nor troubles with Indians anywhere in the de
report. The exceptions are: 1st, the murder of three sur

arty of Cheyennes, on the Cimmarron River, in March last. The point
'here these murders were committed was beyond the limits of this de-
artment, but I deemed it necessary, in view of the fact that the scene
f the trouble was nearer and more accessible to this place than to the
eadquarters department of Texas, to take immediate measures to pre-
ent any further occurrence of that kind, and I accordingly placed
wo companies of the Sixth Cavalry at a point southwest of Wichita,
n the Arkansas River, to scout continually the southern line of Kansas
s far as the Cimmarron, and three companies of the same regiment at
'ort Dodge—one company of which was directed to scout the country
outh and southeast from the post. Since then no trouble with Indians
f any kind has occurred in that region.

2d. The usual small troubles (much more trifling in character and
ewer in number) have occurred in the southern part of New Mexico
ith the Apaches on the reservations of Tulerosa and Fort Stanton, but
y the active operations and judicious management of Major Price,
ighth Cavalry, who has general command in Southern New Mexico,
nd who has been continually moving about through that country with
our, and at times five, companies of his regiment, difficulties and depre-
ations have been kept within very narrow limits, and have now almost
ltogether ceased.

The policy in the department has been rather to prevent than try to
unish Indian depredations, by adopting early in the spring, and main-
aining until winter set in, such precautionary measures as seemed most
fficient, and the results have been eminently satisfactory, and are
lainly manifest in the undisturbed condition of the department and in
ie entire absence of alarm or uneasiness on the part of the frontier
ettlers, who have ceased entirely to feel alarmed themselves or to
larm other people. Instead of keeping the troops at the military posts,
nly to be sent out on receipt of news of Indian depredations, the en-
re cavalry force has been kept in the field since the early spring, mov-
ig about from place to place, a few miles every day, without special
bject in their marches, except water and grass for animals. Instead of
ermitting the Indians to wander about, as has been their custom, all
rough the summer, to commit depredations whenever the opportunity
ffered, the troops have themselves been kept on the march, so that the
idians could not know where they were or at what moment or when
iey might come in contact with them. In this manner the necessity of
atching has been thrown upon the Indians and not, as hitherto, upon
ie troops shut up at the posts for a large part of the season, and the
esult has been that the Indians have been very cautious and have in
ie main kept very close to the region assigned them as reservations.

The greatest danger now in this department arises from what seems
) me the unfortunate practice of granting permission to Indians, of
hatever tribe, to leave their reservations, and on pretext of hunting
r really for that purpose, to roam in considerable bands all through
ie frontier settlements of Kansas and Colorado. I do not consider
ich a practice just to the white settlers, and it is certainly unsafe both
) them and to the Indians.

I dwelt at such length on this subject in my last report that I deem
unnecessary to discuss it here, more especially as I know that the
ivision commander entertains the same opinion as I do on the subject
nd is as fully acquainted with the reasons.

There was at one time uneasiness about those bands of the Utes,
pon whose reservations white men, miners, and prospectors had largely
itruded, but no outbreak has occurred, and I presume such arrange-

ments have now been made as will render any difficulty wi
dians unlikely.

I deem it unnecessary to enter into any consideration of
of shelter for troops or the repair of posts now occupied
such matters have been fully represented in regular co
concerning them.

It is proper, however, to state, as the result of actual ex
a yearly sum ought to be appropriated to keep the mili
repair. It is not to be supposed that such frail structures
built for the accommodation of the military forces of the U
doing duty on the remote frontier, (except the ordnance
kept in repair without the expenditure of a considerable s
nor does it seem the best or most efficient way of doing th
estimates to Washington for the smallest details of such
certainly would seem better to assign a certain sum annua
of all important permanent posts, so that these posts at le
always kept in good order. The hardships and hard work
on the frontier must endure, and do, and which they
dergo, certainly entitles them to habitable quarters durin
winters of this region, and whatever expenditure of mone
to secure this for them ought, if possible, to be made both
of justice and of good policy.

I trust, therefore, that some provision will be made, h
to assign at the beginning of every fiscal year a fixed s
termined in any manner which may seem most suitable, t
pair all the posts in each military department in the gros
post separately, so that the trifling work which needs to b
every day may be done when the necessity arises, and wi
the long delay of sending to and receiving back from Was
estimates for such purposes.

The sums thus required would be enough if furnished at
are quite insufficient after a delay of two or three months.

It is my agreeable duty to bear testimony to the very
judicious action of Major Price, Eighth Cavalry, in his dea
Indians in the southern part of New Mexico, as also of Maj
Eighth Cavalry, commanding in the Ute country. Both
have been very active and very successful in keeping pea
tecting the frontiers.

Lieut. Col. J. R. Brooke, Third Infantry, commanding
and Maj. R. I. Dodge, Third Infantry, commanding Fort D
titled to the same justice at my hands.

The camp of the Sixth Cavalry near Fort Hays, under
Col. James Oakes of that regiment, has also fully satisfie
for which cavalry was stationed in that region.

Orders will be sent in a few days to withdraw all the
field to winter-quarters at the posts from which they were
by November 10 it is expected that the execution of the
completed.

After that date there is little, if any, fear that Indians
on the great plains.

We have been subjected to much inconvenience and so
ment by the absence of so many field officers from their r
it is hoped that some of those now on detached service m
to rejoin their regiments at the earliest convenient time.

Concerning the administration of the department in it
tails, I refer to the reports of the chiefs of the staff departm

d in relation to the same matters, I ask attention to the recom-
endations made in my previous reports, which are again commended
the consideration of the proper authorities.

It is, perhaps, not improper for me to specify two subjects which seem
me to be worthy of attention:

1st. Concerning the recruiting service and the detail of officers for
at duty. The tour of duty of officers assigned to recruiting service
gins and ends on the 1st of January, the tour of such officers lasting
o years. I suggest that the time of reporting for and being relieved
om such duty be fixed at May 1 or July 1, instead of January 1. Of-
ers detached for recruiting service from remote posts, far from rail-
ads, and ordered to report January 1, in the depth of winter,
d it, in many cases, impracticable or exceedingly difficult, without
ich suffering, to obey the order, unless, indeed, they leave their posts
veral months earlier than would be necessary to make the journey,
d officers relieved from recruiting duty on the 1st of January, in like
anner, find it, at times, absolutely impracticable in many cases to
n their proper stations at that season of the year, and are therefore
liged either to ask leave of absence or delay in obeying the order,
til the season is suitable to travel to remote posts. In this manner
any officers are kept away from duty at their posts for several months,
ien, by fixing the time of joining recruiting stations, or being relieved
om that duty, at May 1 or July 1, no such necessity would arise. I
not know what are the reasons for preferring the 1st of January for
ginning and terminating recruiting-service details, but, unless they
e very important, the interests of the service on the frontier would be
eatly benefited by the suggested change.

2d. It would be greatly to the advantage of the Army on the frontier
the annual appropriations for building and repairing shelter for the
oops could be made available on the 1st of February of each year in-
ead of the 1st of July. It has not seemed practicable to distribute
e sums approved on requisitions for the posts on the frontier so that
ey can reach such posts before the autumn, generally too late in the
ason to be applied to building before the following spring. By hav-
g the money assigned for such purposes early in the spring, the whole
ason in which building or repairing can be best done, would be avail-
le for the purpose, and the troops need not, as is now the case, suf-
more or less all winter because of the impracticability of using the
nds actually allowed during that season of the year. Whether this
ange can be made, or whether it be judicious to make it, must be left
higher authority, and I simply offer the suggestion for considera-
n.

I would also suggest the advisability of retransferring to this depart-
nt that portion of the Indian country between the southern line of
nsas and the Canadian River, including Fort Gibson. I think the
vision commander agrees with me that the defensive arrangements of
s department require that the department commander should have
risdiction over that region.

The various staff departments have been conducted with efficiency
d good judgment, as I think the results show.

We are rapidly acquiring thorough knowledge of all the country em-
aced in the limits of the department, and most excellent maps, through
e various scouting parties, in each of which an officer or an engineer
dier has made careful surveys and sketches under detailed instruc-
ns from department headquarters.

I transmit inclosed a roster of the department and a fie
the troops serving in it.

I am, colonel, respectfully, your obedient servant,

JNO. P
B'v't Maj. Gen., U. S. A., Con

Official:
R. WILLIAMS,
Assistant Adjutant-General.

Lieut. Col. J. B. FRY, *Asst. Adjt. Gen.*,
Headquarters Military Division of the Missouri.

NOTE.—Since the above report was written, a party of t
Cheyennes left their reservation south of Camp Supply, and
to the west of all the posts entered the southern part of Co
of Fort Lyon, and went up as far as the Kansas Pacific
River Bend. The Indians were not hostile, and beyond st
cooking utensils and killing a few cattle they did no damag
that their presence excited such immediate attention from
as well as the troops, they hastened back toward their reser

Full report of the matter having been made to the divisio
der so recently, it seems unnecessary to enter into details he
Indians belonging to this party are individually known t
arrested and punished at any time on their reservation. Th
committed any acts demanding such condign capital punis
see from the papers) the Secretary of the Interior recom
have they done anything that is not done every year by
reservation Indians, against the perpetrators of which sever
have been discountenanced, not to say denounced. Only i
last a party of Cheyennes, some of whom were without dou
Indians who were on the late expedition into Colorado, w
Canadian River from their reservation with the same purp
fight the Utes,) and in returning began to depredate on the
near Bascom. They were attacked by troops from that post
killed. This act, which seems to be recommended in the p
when it is too late for execution, was the occasion of remo
the Interior Department, and a manifest intention was show
the blame of any further depredations by the Cheyennes up
tary who did it. If the Interior Department really wishes
ennes recently in Colorado punished, they have only to cons
arrest when they get back to their reservation. I can
promptly do this and save unnecessary bloodshed among in
ple.

REPORT OF MAJ. GEN. IRWIN McDOWEL

HEADQUARTERS DIVISION OF THE SO
Louisville, Ky., Octobe

SIR: I have the honor to submit to the General of the Ar
lowing report of the military operations and the military ser
division (reconstituted December 11, 1872, and consisting of t
ments of the South and the Gulf) for the year commencing
1872:

DEPARTMENT OF THE SOUTH.

October 1, 1872.—The posts of Lincolnton and Rutherfordton, N. C.,
ere discontinued, and Company C, Seventh Cavalry, was ordered from
incolnton to Charlotte, N. C., and Company C, Fourth Artillery, was
rdered from Rutherfordton to Raleigh, N. C., where it arrived October
, 1872.

October 16, 1872.—Company H, Seventh Cavalry, was sent from Nash-
lle, Tenn., to Livingstone, Sumter County, Ala., to protect citi-
ns at the election, and returned November 10, 1872.

October 21, 1872.—Company E, Eighteenth Infantry, sent from At-
nta, Ga., to Seales Station, Russell County, Ala., and ordered
ack November 8, 1872. One commissioned officer and twenty-five men,
ompany A, Seventh Cavalry, were ordered from Elizabethtown, Ky.,
report to United States marshal. One commissioned officer and fif-
en men of Company H, Seventh Cavalry, detached from Livingstone,
umter County, to Carrollton, Pickens County, Ala., ordered back
ovember 10, 1872.

October 22, 1872.—Company B, Second Infantry, was sent from At-
nta, Ga., to Demopolis, Marengo County, Ala., and Company I,
econd Infantry, was sent from Chattanooga, Tenn, to Eutaw, Greene
ounty, Ala. Both returned to their posts November 10, 1872.
ne commissioned officer and twelve enlisted men of Company A,
ighteenth Infantry, were ordered from Atlanta, Ga., to Macon, Ga.,
request of the United States marshal, and ordered back November
, 1872.

October 29, 1872.—Company E, Third Artillery, was ordered from Fort
ulaski to Savannah, Ga., during the election.

November 1, 1872.—One officer and ten men were placed en route for
ach of the following places in Alabama from Chattanooga, Tenn.: Ab-
eville, Henry County, Second Lieut. A. McIntyre, Second Infantry.
olumbia, Henry County, First Lieut. J. Ulis, Second Infantry. Or-
ered back November 10, 1872.

One officer and ten men placed en route for each of the following places
Alabama, from Nashville, Tenn.; Ozark, Dale County; Greenville,
utler County; Rutledge, Crenshaw County; Troy, Pike County. Or-
ered back November 10, 1872.

November 6, 1872.—Headquarters, and Light Battery C, Third Artil-
ry, were placed en route for New York City, in compliance with Gen-
al Orders No. 88, War Department, Adjutant-General's Office, of 1872.

November 12, 1872.—Light Battery K, First Artillery, arrived in the
epartment from the Department of the East, in compliance with Gen-
al Orders No. 88, War Department, Adjutant-General's Office, of 1872,
d took post at Charleston, S. C.

November 15, 1872.—Headquarters, staff, band, and Company H, First
rtillery, arrived in the department pursuant to General Orders No. 88,
ar Department, Adjutant-General's Office, of 1872, and took post at
harleston, S. C., relieving Company I, Third Artillery, which was
aced en route for the Department of the East.

November 17, 1872.—Company D, First Artillery, arrived in the de-
artment from the Department of the East pursuant to General Orders
o. 88, War Department, Adjutant-General's Office, of 1872, and took
ost at Savannah, Ga., relieving Company K, Third Artillery, which
as placed en route for the Department of the East.

September 4, 1873.—The post of Charlotte, N. C., discontinued, and ompany D, Second Artillery, ordered to take post at Charleston Bar- acks, S. C.

September 20, 1873.—The garrison of Mobile, Ala., headquarters, staff, and, and Companies G and K, Second Infantry, temporarily moved to ount Vernon, Ala., in consequence of yellow fever. The movements of roops in this department were made in aid of the United States civil fficers, to enforce the processes of the United States courts, and collect he internal revenue. In all cases the troops fulfilled the duty on which

they were sent. Soon after assuming command of the divisi
an inspection of all the posts in this department, and in the i
discipline, military instruction, and economy, abandoned suc
as the nature of the public service permitted, and concen
troops, as far as practicable, at such points as enabled them t
tained at the least cost and greatest comfort. Fourteen of th
posts of the department were thus abandoned, at an annua
over !$100,000 on account of the Quartermaster's Departm
For the purpose of making a further reduction in expense, o
the necessity of repairing old temporary quarters built on hir
and of exchanging an unhealthy for a healthy post, I made a
spection in person in the month of August last of the late M
non Arsenal, Ala., (now directed to be called Mount Vernon
with the view of preparing economical and judicious estimate
tions necessary to convert, at an early day, bare workshops
ters, and an arsenal into barracks, that I might send there
now at Mobile. I trust the War Department may soon be ab
tion the estimates for these alterations, and grant authority f
in estimates for a hospital. The place (I cannot yet say the
at Mount Vernon is now occupied by the garrison from Mob
ing sought refuge there from the yellow fever now afflicting
The late Charleston Arsenal, hereafter to be called Charleston
is now occupied by a single company. I propose soon to i
post with the view of submitting estimates for such alterati
enable me to place there two, or at least one more company
further reduce the sum we are now paying for hire of quarter

The deputy quartermaster-general attached to this departm
report is herewith) states the United States to be indebted th
Quartermaster's Department, in the Department of the Sout
fiscal year ending June 30, 1873, as follows:

Incidental expenses ....
Barracks and quarters ....

He further states that as this amount was not for material
but for personal services, it is the decision of the War Depart
the creditors cannot be paid from the appropriations for this
must now look to Congress for relief.

The sum of $12,529.29, for what is known as "incidental ex
made up of small sums due to, mostly, poor people; $4,471.4
clerks authorized by the War Department; $683 to colored s
at five different posts; $1,881 to blacksmiths for shoeing the
cavalry, and quartermasters' horses at eighteen different pos
to soldiers at twenty-three posts for extra duty, pay allow
when on constant hard labor for more than ten days; $1,320
at twelve posts for rewards, allowed by law, for apprehens
serters.

The sum of $11,197.16 is mostly due for rent of buildings an
for barracks and quarters at twelve different posts—those
pied—it having been thought best to pay in full at those whic
to be abandoned. I am safe in saying that everything has
to insure as little liability under these heads as possible; th
it would have been much greater but for the reduction I hav
the number of posts. I am assured, and believe, that the va
assistant and acting assistant quartermasters have been prom

ıg in their estimates, and that these have been by the deputy quarter-aster-general promptly sent to the Quartermaster-General's Office.

I have no question, also, that the funds were remitted to the extent ıe appropriation permitted, and were distributed as soon as possible. only dwell on this subject because of the hardship I know it has ıused many deserving people, and of the discredit it has brought on ıe service, and to show that the indebtedness is not due to any want vigilance or fault on my part, or of those under me.

I send herewith the reports of the chiefs of the several staff departıents at department headquarters of the operations under their charge ıring the part year.

DEPARTMENT OF THE GULF.

I submit herewith the report of Col. W. H. Emory, commanding the epartment, for an account of the movement of troops and the state of ıe service in his command.

The duty devolving on the officers and men and their commander in ıis department during the past year has been of the most delicate, ıportant, and frequently embarrassing kind, and it gives me pleasure state that it has been discharged with tact, fidelity, and, in all cases, ith effect.

I have the honor to be, very respectfully, your most obedient servant,

IRWIN McDOWELL,
Maj. Gen. Commanding Division of the South.

The ASSISTANT ADJUTANT-GENERAL,
Headquarters of the Army, Washington, D. C.

REPORT OF MAJ. GEN. J. M. SCHOFIELD.

HEADQUARTERS MILITARY DIVISION OF THE PACIFIC,
San Francisco, Cal., November 3, 1873.

SIR: I have the honor to submit to the General of the Army the inosed reports of operations in this military division during the past ear.

The Division of the Pacific embraces the three Departments of Arona, California, and the Columbia.

The Department of Arizona, commanded by Bvt. Maj. Gen. George rook, lieutenant-colonel Twenty-third Infantry, since appointed brigaer general, has been the theater of active operations against hostile ıdians—operations characterized by consummate skill displayed in the ans of the departmental commander, and by gallantry and untiring ıergy of the officers and men engaged. With few exceptions the tely-hostile Apaches have been forced to submit to authority, and are ow living quietly upon the reservations assigned them.

Since the close of General Crook's campaign it has been found possie to diminish somewhat the cavalry force in that department, which ad been increased to insure his success.

Increased development and security have diminished the cost of supies for the troops.

The military telegraph to Prescott and Tucson, now nearly completed, eside its great military advantages, will facilitate commercial business ıd promote further development of the Territory.

The condition of Arizona is more hopeful than at any form
and great credit is due for this improvement to the depart
mander and his subordinates.

I respectfully refer to General Crook's report and the acco
documents for full and detailed information upon all matters
with his command.

The Department of the Columbia has been the scene of a co
remarkable in some respects than any before known in Am
tory. All the details of the Modoc war are so fully known t
ernment and to the public, through reports heretofore ma
would be superfluous to repeat them here.

The Department of the Columbia is now commanded by
Gen. Jefferson C. Davis, colonel Twenty-third Infantry, who
to that command upon the death of the lamented General Ca

General Davis's annual report has not yet been receive
headquarters.

The Department of California, under my immediate com
enjoyed uninterrupted peace during the past year. Near
troops, including the artillery, were engaged in the campai
the Modocs, and some of them have since been employed in
the prisoners and in conducting them to their destination i
partment of the Platte.

The inclosure marked A gives the strength and distribu
troops serving in the department.

The reports of the chiefs of staff departments, also inclosed
details of transactions in their separate departments.

Some changes in the stations of troops, rendered expedie
progress of events, will hereafter be made the subject of spe
accompanied by estimates of the expenditures necessary to
them.

Very respectfully, your obedient servant,

J. M. SCHOFIE
Major

The ASSISTANT ADJUTANT-GENERAL,
Headquarters of the Army, Washington, D. C.

REPORT OF MAJ. GEN. W. S. HANCOCK.

HEADQUARTERS MILITARY DIVISION OF THE ATLAN
New York City, September

SIR: I have the honor to submit for the information of t
of the Army my annual report for the division.

I was assigned to that command and to that of the Dep
the East by General Order No. 100, Headquarters of the Arm
ber 25, 1872, and pursuant to these orders assumed command
16, 1872.

General Order No. 105, Headquarters of the Army, Adjutan
Office, December 7, 1872, transferred the headquarters of th
from Philadelphia, Pa., to New York City.

The organization of the division has not been changed si
last annual report. Its aggregate in troops at date of last r
as follows:

Department of the East, 178 officers; enlisted men, 1,53 nent of the Lakes, 78 officers; enlisted men, 603; total, 256 officers, ,134 enlisted men.

I refer to my inclosed report, as commander of the Department of the East, for a detailed statement of operations in that command during he past year, and also refer for a similar purpose to inclosed annual report of the commander of the Department of the Lakes.

The attention of the General of the Army is respectfully invited to he remarks and recommendations contained in the concluding portion of my report, as commander of the Department of the East, relative to he urgent necessity for a military prison in that command, and which night serve as well for Department of the Lakes, and concerning the erection of some new buildings at certain posts in New York Harbor.

Having recently visited and inspected all the posts in the Department of the Lakes, I am able to concur in the remarks and recommendations of the commanding general of that department.

In reference to the reservation at Fort Gratiot, I may add, in addition o my approval of the views expressed in his report, that I think it unfortunate that the ground between the fort and the inlet of the straits hould have been ceded by Congress, and that with all the guards that nay be thrown around the deed of cession, I believe, for military purposes, the value of the reservation has been much impaired. I think, also, it would be better that the part of the light-house reservation authorized to be sold should be reserved for military purposes, as since he obstruction of the old reservation caused by the grant to the railroad company, I am not sure that it might not be as well to make that he defensive point instead of the present position.

I submit herewith a list of the military reservations in this division, showing when and how the land was secured to the Government, and now occupied at this date.

Fort Mackinac is an excellent place for the cantonment of troops intended for service on the upper lakes. It has no other importance at his date, as it cannot be made to protect the straits on which it is situted.

Plattsburg Barracks may also be used for the quartering of troops, out can serve no other military purpose not provided for by Fort Montgomery.

Carlisle is only important as a cantonment.

David's Island might advantageously be made a cantonment for the roops intended to occupy the forts in the East River, when completed.

As all of the reservations named in the accompanying list, save Fort Vilkins, Copper Harbor, Lake Superior, (now abandoned, and not mportant to the military service,) are deemed to be useful, it would in ny judgment be better to retain all, with that exception.

I inclose herewith reports of the chiefs of the several staff corps at hese headquarters.

The assistant inspector-general, having been absent for some time on a tour of inspection, has not been able to furnish his annual report. It vill be transmitted to your office as soon as practicable after his return o these headquarters.

I am, sir, very respectfully, your obedient servant,

WINF'D S. HANCOCK,
Maj. Gen., U. S. A., Commanding.

The ASSISTANT ADJUTANT-GENERAL,
Headquarters of the Army, Washington, D. C.

E. D. TOWNSEND,
Adjutant-General.

WAR DEPARTMENT,
Adjutant-General's Office, October 7, 18

SIR: My report of October 7, 1872, referred to the *re-estab*
business of the late Bureau of Refugees, Freedmen, and Aband
Lands, and recited the regulations for conducting it. The said re
tions have proved well adapted to their object, and the results obt
are, in a high degree, satisfactory.

In addition to the disbursing offices established under War De
ment General Orders No. 79, of 1872, it has been found expedie
establish others: At Fort Monroe, Virginia; Forts Macon and John
North Carolina; Charleston, South Carolina; and Savannah, Georgi
the payments to claimants residing at and near to those points, th
enabling them to receive the amounts due them, with comparatively
expense to themselves and a considerable saving to the Governme

For the thirteen offices now open, the force employed is, 13 co
sioned officers, 30 clerks, and 10 messengers and janitors.

The officers in charge of the offices at Forts Monroe, Maco
Johnston, Charleston, and Savannah, attend to their ordinary pos
company duties in addition.

The *discovery* of claimants who, since filing their claims, have ch
their places of residence, many of them to other States, has, in
instances, proved extremely difficult, but through diligent effort o
part of the disbursing officers, who have availed themselves of all
ticable means to attain that end, they have succeeded in ascerta
the whereabouts of a considerable number, and in securing to the
amounts awarded in settlement of their claims.

It was also ascertained that numerous claimants were living at
remote from either of the established paying districts, and th
secure payment to them through any one of the disbursing o
would be impossible, without entailing expenses largely dispropo
ate to the amounts involved. A plan was therefore submitted
led to an arrangement, by the Secretary of War with the Postm
General, for the payment of such claimants through the postmas
or nearest to their respective places of residence. A number
already been paid in this way, and the system is found to work f
bly. As a further aid to the "discovery of the claimants," a ci
letter, copy herewith, A, dated March 18, 1873, was sent to certai
ators and Representatives. Resort was also had to advertising.

Early in the month of December, 1872, it was discovered that
borne upon the records of the late Bureau of Refugees, Freedme
Abandoned Lands as *paid*, were, in fact, unpaid, while others bo
unpaid had actually been paid. It therefore became necessary
once subject said records to a careful examination and compariso
those of the accounting officers of the Treasury, in order that all
sary emendations might be made and the work of payment be
proceeded with. This labor occupied about one month, during
period all payments were necessarily suspended. Until the discov
the errors referred to, the disbursing officer stood in constant da
making duplicate payments, or of rejecting just claims.

By the act of March 3, 1873, entitled "An act to place colored p
who enlisted in the Army on the same footing as other soldiers
bounty and pension," a very large number of colored ex-soldier
become entitled to bounty, of which they had hitherto been depri
reason of their having been "slaves" April 19, 1861. Claims und
act are filing in the Office of the Second Auditor of the Tre
and a few certificates in settlement have already been received a

ffice. When such claims come, as they undoubtedly will, to be numerously settled, the labors of this office will, of course, be proportionately nlarged.

The missing and defective records of the late Bureau have, to a limted extent, been supplied by the late Commissioner, eighteen packages, ontaining records of various descriptions, including books of "Letters eceived," "Letters sent," and "Indorsements," "Bounty registers," iles of letters, claims, soldiers' discharges, &c., having been received. The bulk, however, of those indicated to the late Commissioner by letter of January 18, 1873, has not been produced.

The discontinuance, under the circular of August 8, 1872, of the *proscution* of claims for bounties or other moneys due to colored soldiers and others, has resulted favorably to the Government by a large saving of expenses.

Correspondence has been had with the late Commissioner from time o time, relative to subjects involved in his administration of the late Bureau.

I respectfully submit, as a part of this communication, my reports dated February 20, 1873, August 4, 1873, and September 23, 1873, (now before the War Department,) which relate, respectively, to the condition of the affairs of the late Bureau, and the responsibility and accountability of the late Commissioner.

The tabular exhibits herewith, submitted by the chief disbursing officer, will indicate the financial operations during the fiscal year ending June 30, 1873, and to August 31, 1873.

Very respectfully, general, your obedient servant,

THOMAS M. VINCENT,
Assistant Adjutant-General.

The ADJUTANT-GENERAL OF THE ARMY,
Washington, D. C.

Approved and respectfully submitted to the Secretary of War.

E. D. TOWNSEND,
Adjutant-General.

(A.)

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, March 18, 1873.

To Senators and Representatives from States wherein claimants were believed to be.]

SIR: I have the honor to inform you that all colored soldiers or sailors, or their egal representatives, who have received notice from the Treasury Department that ertificates have been issued in settlement of their claims for pay, bounty, prize-money, &c., and who have not received the amounts due them, can now be paid promptly, without further expense to claimants, so soon as this Office shall have learned the postffice address.

Therefore, I respectfully request that you will inform claimants within your reach, and request them to send their names, with post-office address, and the designation of he company and regiment in which the service was rendered, to the Adjutant-General United States Army, Washington, D. C.

It should be distinctly understood that a claimant need not send his or her name, &c., unless he or she shall have been notified from the Treasury Department that a ertificate in his or her favor has been issued, this Office not having to do with cases prior to that action.

Your aid in the matter, as indicated, will not only benefit the colored claimants, but prove advantageous to the public service.

Very respectfully, your obedient servant,

E. D. TOWNSEND,
Adjutant-General.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
CHIEF DISBURSING OFFICE, FREEDMEN'S BRANCH,
Washington, D. C., October 7, 18

MAJOR: I have the honor to submit herewith tabular exhibits o financial operations of the disbursing office of the freedman's br of the Adjutant-General's Office in the payment of pay, bounty, p money, and other moneys due to colored soldiers, sailors, &c., u joint resolution of March 29, 1867, for the fiscal year ending Jun 1873, and embodying also a separate exhibit of the like operations July 1 to August 31, 1873.

Of the amount ($100,000) appropriated by Congress to defray expenses attending the payment of bounties, &c., for the year en June 30, 1873, there has been expended the sum of $58,450.06, lea an unexpended balance of $41,549.94.

Much attention has been given to the systematizing of the ge work, and under the system, as now perfected, all settled claims ca paid without any delay, other than that preceding the discovery identification of the claimants.

Very respectfully, your obedient servant,

JAMES McMILLAN,
Capt. Third Artillery, Chief Disbursing Offic

Maj. THOMAS M. VINCENT,
Assistant Adjutant-General.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, October 14, 1873.

Recruiting for cavalry, artillery, and infantry has been carried on ıring the past year in the principal northern and western, and in a few ' the southern cities. Owing, however, to the limited sums appropri-ed for this service for the last fiscal year, several rendezvous which ight have been maintained in small towns as branches to those located the large cities have been discontinued. On the same account it as found necessary to diminish the number of enlistments by raising ıe standard of height for artillery and infantry recruits, in order to eep down the expenses of the recruiting service. From this cause the giments became reduced in number at the very season for active op-ations, and the Department had not the means to strengthen them.

The appropriation for the present year, reduced upon the original stimate made by this Office, will towards the close of the year again run ıort. Meantime, however, every effort will be made to fill the regi-ents to the standard allowed.

Two rendezvous for organizations on the Pacific coast are maintained ıder the supervision of the commanding general, Military Division of e Pacific, but the number of men there enlisted is insufficient to keep the strength of the organizations in that section of the country.

There is a rendezvous for the Corps of Engineers in New York City, ıder charge of an officer of that corps.

With the exception of those stationed on the Pacific coast, and those cruiting for the Battalion of Engineers, all recruiting officers enlist for ıe colored regiments.

A few officers located in cities where there are stations for the signal-rvice also enlist men for that arm of the service.

E. D. TOWNSEND,
Adjutant-General.

REPORT OF THE INSPECTOR-GENERAL.

REPORT

OF

THE INSPECTOR-GENERAL.

WAR DEPARTMENT, INSPECTOR-GENERAL'S OFFICE,
Washington, October 10, 1873.

SIR: The inspection service of the Army during the past year has
een performed in conformity with the requirements of General Orders
o. 87, series of 1872, the five inspectors-general having been exclu-
vely subject to the orders of the Secretary of War and the General of
e Army.

My own duties, for the most part, have been confined to the charge of
e Inspector-General's Office, at the headquarters of the Army, receiv-
g and examining inspection reports, and extracting therefrom all mat-
rs of interest to, or requiring action by, the Secretary of War, the
eneral of the Army, and the heads of the different bureaus of the War
epartment; and it is believed that much important information has
us been communicated which would not otherwise have come to the
owledge of those officials.

Inspectors-General D. B. Sacket, E. Schriver, N. H. Davis, and J. A.
ardie, during the autumn of 1872 and the winter of 1872 and 1873,
ade careful and thorough inspections of the Department of the South,
part of the Department of Texas, the entire Department of the Mis-
uri, and the Department of the Gulf.

Early in the spring of 1873 these officers, under orders from the Sec-
tary of War, commenced the inspection of the Departments of Arizona,
exas, Dakota, and the Columbia, thoroughly examining into the con-
tion of the *personnel* and *materiél* of the Army at all the remote and wide-
dispersed posts, stations, and depots within the limits of those depart-
ents—excepting Alaska—and embracing one hundred and seventeen
ilitary posts, garrisoned by eighteen regiments of infantry, seventeen
mpanies of artillery, and eight regiments of cavalry. This laborious
rvice involved many thousands of miles of wagon-travel, for the most
rt over unsettled sections of country infested by hostile savages, and
cupied each officer from seven to nine months.

Besides this, other minor inspections and investigations have, from
ne to time, been made by these officers, thus occupying all their time,
d involving voluminous reports, which have been made without the
penditure of a dollar for clerical assistance.

Inspector-General Hardie, at the request of the general commanding
e Military Division of the Pacific, and by authority of the Secretary
War, previous to inspecting the Department of the Columbia, visited
e headquarters of the expedition against the Modoc Indians, and made
rtain inspections and reports for the division commander.

In a letter from General Schofield to Colonel Hardie, dated April 21,
73, is the following:

> In order that the public service may derive the fullest benefit from your tour
> spection in the Department of the Columbia, I request that your inspections m
> extended to all branches of the military service, so far as it can be done witho
> terfering with the plans or wishes of the department commander; and that all e
> faults, or defects you may discover be pointed out to the officers concerned, an
> rected at once as far as practicable.
>
> The instructions that may thus be given to young and inexperienced officers i
> of the greatest benefits expected from your visit to the frontier posts.

* * * * * * *

Substantially similar requests were made of the other inspec
general by the commanders of the departments of "Texas,"
South," "the Gulf," "Dakota," "Arizona," and "the Columbia,"
in accordance with their instructions from the War Department, pr
reports were made directly to those commanders, upon all matters w
were deemed of interest to them, or which required their action, a
is believed that those reports received immediate action at the han
the department commanders.

The inspectors-general report that the commanders of the de
ments above named rendered great assistance to them in the execu
of their duties, by directing that the most ample facilities shoul
afforded them to investigate every branch of the service at all the
and stations within their respective commands. The inspectors' re
also show that the officers generally gladly availed themselves o
opportunity afforded by their visits to ask instruction relative t
correct interpretation of doubtful points of law, regulations, and o
and upon other mooted questions regarding the proper performa
military duties; and it seems to me reasonable to presume that t
tended and diversified experience of these officers, both in the staf
line of the Army, eminently qualify them to give suitable answers to
tions of this character, as well as sound advice and instruction to y
and inexperienced officers.

This, besides promoting social harmony, will doubtless tend to
duce uniformity in the manner of performing military duty in diff
departments and localities, and will unquestionably fortify and en
age zealous and competent officers in their action, and thus greatly
duce to the discipline and efficiency of the Army.

Assistant Inspectors-General R. Jones, A. Baird, and E. H. Ludin
have during the year been attached to the head-quarters of the mil
divisions of "the Pacific," "the Missouri," and "the Atlantic," re
ively. Their reports show they have been actively and usefully eng
in the duties pertaining to their positions, and, it is believed, to th
tire satisfaction of their commanding officers.

Col. J. V. Bomford, Eighth Infantry; Lieut. Col. J. P. Hatch, F
Cavalry, and Capt. G. B. Russell, Ninth Infantry, for a portion o
year acted as assistant inspectors-general, but have been relieved.

Maj. W. H. Lewis, Seventh Infantry; Maj. A. W. Evans, Third
alry, and Capt. W. W. Sanders, Sixth Infantry, are respectively atta
to the head-quarters of the Departments of Dakota, Arizona, and
Gulf, as acting assistant inspectors-general.

In compliance with the requirements of the system instituted b
Secretary of War, in General Orders No. 87, series of 1872, scrutin
examinations have been made of the accounts of all officers who
made important disbursements of public money during the year.
funds received and expended by them, with the balances they rep
due the United States, have been carefully compared and verifie
official statements obtained from the Treasury Department and d
itories.

If this system continues to be strictly carried out in accordance with the order, it is believed that few losses will occur to the United States, as it seems hardly possible that a defalcation can be concealed or overlooked for any great length of time, and it is gratifying to state that no embezzlement and but three cases of misapplication of funds have been reported during the year, the latter being small sums which probably will not result in any loss to the Government.

The inspectors report that in some cases the monthly balances of public funds on deposit, with the numbers and amounts of checks drawn, are not regularly furnished disbursing officers by the depositories, which prevents verifying their check-book balances with those of the depositories.

The inspection reports show that the troops have been well supplied with clothing during the year, although the new-pattern uniform has not yet reached some of the more distant posts. Subsistence supplies have been abundant and of good quality, but at a great many posts complaints have been made that large excesses of officers' and canned stores have accumulated and become damaged by age to such an extent as to render it necessary to sell them at much less than cost. At some of the posts three and four years' supply of certain perishable articles are reported on hand. Whether this surplus resulted from over-estimates or from the stores being furnished in excess of requisitions, or from the changes of troops, I am unable to say, but this condition of things has resulted in losses to the United States, and may, it is believed, be to a large extent avoided in the future if the post commissaries and post commanders, with the officers who fill the requisitions, are held to a rigid accountability that they call for and supply no more than is necessary.

Complaints have been made to the inspectors by the officers at many posts that their predecessors, on being relieved, have carried away files of orders, books, and other records which properly pertain to the posts; which practice should be promptly corrected by orders.

Inspector-General Davis states, in his annual report, that post quartermasters do not generally keep a proper morning report, accounting for their employés, public animals, and forage and fuel received, issued, and remaining on hand; this he regards as an important report, which, if properly kept, would avoid some discrepancies which might otherwise occur.

The inspections during the year have also disclosed the fact that at several posts large deficiencies of forage have existed, which the officers responsible have in some instances claimed resulted from great shrinkage in the dry atmosphere of the plains. There are good reasons for believing, however, that in some cases these deficiencies have arisen from want of proper care on the part of quartermasters in weighing and receiving the forage from contractors or predecessors.

Public animals picked up astray or coming into possession of quartermasters otherwise than by regular transfer, as well as forage rentered surplus by short issues, have not in all cases been taken up and accounted for until the attention of the authorities was called to the facts by the inspectors.

These irregularities are, however, exceptional, the inspection reports indicating that the officers performing the duties of quartermasters are generally improving in zeal and efficiency; that better care is taken of public property, and more regard manifested for economy and other interests of the service than heretofore.

All the facts above stated have been reported by the inspectors to department commanders, who have, it is believed, taken prompt me ures to investigate and correct the irregularities.

To prevent soldiers under charges from being confined for long peri previous to trial, it is suggested that post commanders be inves with authority to present for trial, before general courts-martial, ca not of an unusual character, that have arisen subsequent to the order of the court, without the charges being first referred to departm commanders, which, at some remote posts, consume six weeks' time, frequently involve the necessity and expense of convening anot court-martial.

Notwithstanding the fact that the condition of the soldier in our Ar has been greatly ameliorated, and his pay and allowances increased, recent regulations and legislation, and although the aggregate num of desertions in the past fiscal year has been about five hundred l than during the previous year, yet the desertions have continued such an extent as to still constitute an evil to the service of the gre est magnitude. Many remedies have been suggested as preventive this, one of the most heinous of military crimes, which involves not o an entire disregard of soldierly honor, but a deliberate act of perju yet nothing seems to have had the desired effect. But few desert have been apprehended on the frontier, for the reason that in ma localities they have been protected by the citizens, who do not genera appreciate the turpitude of the crime.

One of the inspectors-general has suggested a remedy which appe to me worthy of consideration. It is, that desertion be constituted legislative enactment as a felony cognizable by the civil courts of cr inal jurisdiction, the offenders to be arrested by marshals and deputi like other criminals, but this jurisdiction to be concurrent with milita courts.

This, it is believed, would have the effect of educating and impre ing the public mind with a proper sense of the criminality of the offen and prevent evil-disposed persons from harboring deserters.

It would, in my judgment, greatly augment the efficiency of the Ar were more instruction given to recruits previous to sending them organizations from the recruiting depots.

Since the reduction of the Army to the existing standard, urgent ca for recruits to fill vacancies in the different regiments upon the front have generally prevented them being kept at the depots more than week or two, and they frequently join their companies knowing nothi of the use of arms, or even the position of a soldier. Whereas if th were properly instructed for three months at the recruiting depots th would be proficient in the company exercises.

The majority of the troops are now doing duty in the Indian count where they are not only required to perform service as arduous a hazardous as in time of war, but they are often compelled to procu material for and build their own quarters, which, with their other ind pensable fatigue duties, consumes so much of their time that it is f quently impossible to give them much systematic military instructi at the military posts on the frontier.

Besides, the exigencies of the service very often leave but one co missioned officer with a company, and his time is so much taken up wi scouting, escorting, and his other multifarious duties, that he can gi but little attention to drills or other military teaching.

I deem it proper to remark here that the adoption of the new code Army Regulations, recently submitted to Congress for approval, will p

de remedies for most of the irregularities and evils that have been
entioned.

The old Army Regulations of 1863, which, under the act of July 28,
366, are to continue in force until the adoption of a new code, do not
eet the existing exigencies of the service. Indeed, they have been so
tered and amended by laws and orders, that it often requires consider-
ble study and research to determine their actual signification. Besides,
is edition is now exhausted, with but few tattered copies extant, so
at, unless something is done soon, it may be truly said that our Army
ave no regulations.

The officers, for the most part, are exceedingly desirous that a new
de which they can comprehend should be speedily promulgated. In
ew of this, and the additional fact that the regulations now before
ongress will settle many mooted military questions that have never
een touched upon in former editions, and this in accordance with
inions of the best military minds we have ever had in service, and as
my judgment they are in other respects eminently adapted to the
isting necessities of the service, I beg leave again most respectfully
recommend the early action of Congress upon them.

Respectfully submitted.

R. B. MARCY,
Inspector-General.

The ADJUTANT-GENERAL OF THE ARMY.

REPORT OF THE JUDGE-ADVOCATE-GENERAL.

REPORT OF THE JUDGE-ADVOCATE-GENERAL.

REPORT

OF

THE JUDGE-ADVOCATE-GENERAL.

WAR DEPARTMENT, BUREAU OF MILITARY JUSTICE,
Washington, D. C., October 1, 1873.

SIR: In compliance with instructions of circular of the 13th ultimo, I have the honor to submit for your consideration the following statement of the business of this Bureau since the date of my last annual report, of October 1, 1872:

1. Number of records of military courts received, reviewed, and registered, 16,088.
2. Number of special reports made upon court-martial proceedings, and applications for remission of sentences, and upon the miscellaneous questions of law, &c., referred for the opinion of the Bureau, 823.
3. Abstracts of proceedings of trials furnished to the proper officials of the War and Treasury Departments, 1,737.
4. The copies of records furnished under the ninetieth article of war to parties tried by military courts have amounted to 7,723 pages.

The amount of business thus performed during the past year varies little from that reported for the year preceding.

The work of systematically arranging, indexing, &c., the voluminous official papers of the late Provost-Marshal Baker, heretofore reported as in progress, has been completed during the current year.

Respectfully submitted.

J. HOLT,
Judge-Advocate-General.

Hon. W. W. BELKNAP,
Secretary of War.

REPORT OF THE QUARTERMASTER-GENERAL.

WAR DEPARTMENT,
QUARTERMASTER GENERAL'S OFFICE,
Washington, D. C., October 10, 1873.

GENERAL: I have the honor to forward herewith, for the information f the honorable Secretary of War, a report of the operations of the uartermaster's Department during the fiscal year ending on the 30th ay of June, 1873, in duplicate.

Very respectfully, your obedient servant,

M. C. MEIGS,
Quartermaster General, Bvt. Maj. Gen., U. S. A.

he ADJUTANT-GENERAL OF THE ARMY.

REPORT

OF

THE QUARTERMASTER-GENERAL.

QUARTERMASTER GENERAL'S OFFICE,
Washington, D. C., October 10, 1873.

SIR: I have the honor to submit the annual report of operations of e Quartermaster's Department during the fiscal year ending 30th June, 73.

the 1st July, 1872, the balance on account of appropriation for years rior to 1st July, 1870, remaining to credit of the Quartermaster's De-artment in the Treasury undrawn, was by report of last year	$2,290,164 71
nount placed to the credit of appropriations during the year by deposts of funds for redistribution, and of amounts received from sales to fficers of public property purchased prior to July 1, 1870	373,035 81
nount expended for other Departments prior to July 1, 1870, and refunded by them during the last fiscal year	424,428 85
	3,087,629 37
quisitions on settlements made at the Treasury of claims and accounts	1,449,743 37
lance to the credit of appropriations for periods prior to July 1, 1870, emaining in the Treasury June 30, 1873	1,637,886 00

Appropriations for the fiscal year ending June 30, 1871.

lance in the Treasury July 1, 1872		$272,862 25
nount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts derived from sales to officers of public property purchased during the year ending June 30, 1871		8,374 55
nount expended for other Departments during the fiscal year ending une 30, 1871, and refunded by them during the last fiscal year		33,838 70
Total		315,075 50
mitted to disbursing officers during the year, on requests of he Quartermaster General	$550 65	
quisitions on settlements made at the Treasury of claims and ccounts	55,019 45	
		55,570 10
lance in the Treasury June 30, 1873		259,505 40

Appropriations for the fiscal year ending June 30, 1872.

lance in the Treasury, July 1, 1872, of amounts appropriated by acts of Congress approved March 3, 1871, and May 18, 1872	$99,863 39
ppropriation for deficiencies, act of Congress approved March 3, 1873.	1,110,000 00
ansportation of insane volunteers, act of Congress approved May 18, 1872	1,000 00
nount placed to the credit of appropriations during the year by deposts of funds for redistribution, and of amounts derived principally from ales to officers of public property purchased during the year ending June 30, 1872	331,024 32
nount expended for other Departments during the fiscal year ending June 30, 1872, and refunded during the last fiscal year	21,199 92
Total	1,563,087 63

Remitted to disbursing officers during the year on requests of the Quartermaste rGeneral	$148,296 84	
Requisitions on settlements, made at the Treasury, of claims and accounts	384,078 67	
		$532,
Balance in the Treasury July 1, 1873		1,030,

Appropriations for the fiscal year ending June 30, 1873.

Appropriations for fiscal year		$12,114,
Appropriations for deficiencies, act of March 3, 1873		1,570,
So much of the $200,000 appropriated by the act of March 3, 1873, for preservation of clothing and equipage from moth and mildew, during the year ending June 30, 1874, as was used during the year ending June 30, 1873, the appropriating act rendering it available in that year		150,
Amount placed to the credit of appropriations during the year by deposits of funds for distribution, and of amounts derived principally from sales to officers of public property purchased during the year ending June 30, 1873		16,
Amount expended for other Departments, and refunded by them during the fiscal year		
Total		13,850,
Remitted to officers for disbursement on requests of the Quartermaster General	$13,365,188 96	
Requisitions on settlements made at the Treasury of claims and accounts	22,032 52	
Transferred to the Ordnance Department for the manufacture of knapsacks, canteens, and great-coat straps	41,953 33	
		13,429,
Balance in Treasury June 30, 1873		421,

The accounts and vouchers which have been examined in this since the last annual report show disbursements as follows:

On account of appropriations for years prior to the fiscal year ending June 30, 1872	$1,843,
For the fiscal year ending June 30, 1872	8,041,
For the fiscal year ending June 30, 1873	5,638,
Total	15,524,

Appropriations are charged with these disbursements as follows

Appropriations for the Quartermaster's Department.

	Prior to July 1, 1871.	Fiscal year 1871–1872.	Fiscal year 1872–1873.	To
Regular supplies	$376,804 66	$2,940,066 23	$2,182,432 29	$5,499
Incidental expenses	165,975 38	903,317 10	705,951 31	1,775
Purchase of cavalry and artillery horses	375 00	181,829 23	47,391 00	229
Barracks and quarters	295,676 75	1,081,257 06	793,619 19	2,170
Army transportation	959,684 96	2,213,396 60	1,347,823 06	4,520
Mileage, transportation of officers' baggage	486 39	....	....	
Purchase, manufacture, and preservation of clothing, camp and garrison equipage	10,499 36	491,445 92	413,158 29	915
Purchase of stoves	18,145 31	16,593 65	10,527 55	45

dnance Department	....	56 00	....	56 00
lian Department	4,574 56	2,112 65	....	6,687 21
diers' Home	....	84 32	....	84 32
Total	7,057 00	57,437 95	64,769 70	129,264 65

At the close of the fiscal year the balances remaining in the hands of ficers and not needed to discharge liabilities incurred during the fiscal ear, and payable out of these balances, were called in and transferred officers who found themselves deficient in funds to pay for supplies d services purchased or rendered under orders of their commanders.

This money, scattered all over the United States and Territories among me three hundred disbursing officers, has not yet been all brought into e Treasury, and the process of settlement of outstanding accounts is ill going on. It appears that these balances thus collected will not be fficient to pay for all the supplies purchased and services rendered, d a deficiency estimate has accordingly been submitted. It amounts :

gular supplies	$206,000
cidental expenses	241,000
my transportation	592,000
rracks and quarters	127,000
Total	1,166,000

The principal deficiency is in the appropriation for transportation; t there are also deficiencies in regular supplies, incidental expenses, d barracks and quarters.

It is impossible for any human intelligence to predict the exact nature d cost of the military operations of a nation during a period of twelve onths, which begins nearly twelve months after the estimate is made.

The average ordinary general expenses of the Army do not differ eatly from year to year, but the separate items differ greatly, as anges are more or less frequent in the stations of the troops, and as w posts are established and new districts occupied.

The estimates of this office are based upon experience, and when luced it is not always possible for the War Department to so regulate e military movements and to control the cost of articles given by law d regulations to the troops in certain definite quantities as to keep thin the appropriation.

The law gives to officers and men certain fixed supplies of clothing, quarters, of transportation, and when the appropriations are deficient, e officers find themselves in the dilemma of failing to provide what the v requires them to supply, or of incurring liabilities beyond the amount the appropriations. Whichever course is taken violates law.

The forms and methods of keeping and making accounts and returns the Quartermaster's Department have been improved and simplified the issue of General Orders No. 64, October 25, 1871; No. 68, No mber 4, 1871; No. 7, February 21, 1872, and No. 98, November 14,

1872. These four orders publish in compact form the existing reg
tions for making returns of money and of property, and those wh
govern the system of transportation of military material and of tro

They have now been in operation, the two former for nearly two ye
and the latter for one year, and the annual reports of officers doing d
in the Quartermaster's Department are bearing almost unanimous te
mony to the advantages in simplicity and intelligibility of the forms
system now in use and established by these general orders.

I regret to see in the system of regulations recommended to the
Department by a board of officers, and, under the law of July 15, 18
communicated to Congress, a proposition to transfer from the Quar
master's Department to the Commissary Department a large portio
the duties of this Department.

The Quartermaster's Department has always had as one of its spe
duties the transportation of all military stores. It is organized
trained especially to this duty, and there can be no doubt that
plicity, and economy, and efficiency in military operations are
secured by committing such an important branch of the service
some one military department. Hence, I consider as likely to be v
injurious, should it be adopted, the proposition to transfer to the S
sistence Department the transportation and storage of subsistence
plies.

The proposition is that the Subsistence Department shall be respo
ble for and have control over the transportation of its supplies;
commissaries, in addition to purchasing and issuing as heretofore, s
contract for all transportation of their supplies, wherever rail or wa
transportation can be contracted for or hired; that, when supplies
to be transported to posts away from rail or water, the commissary s
make requisition on the quartermaster, at the point where such supp
leave rail or water, for Government wagons and teams for their trans
tation. If the quartermaster cannot furnish these, the commissar
hire wagons or contract for the delivery of the supplies at the plac
destination; and at points of transshipment, if there are no suita
store-houses, the commissary to hire or build such as are needed. T
if adopted, will transfer to the commissary a large part of the dutie
the quartermaster. It will establish two great parties competing aga
each other at all important strategic points for transportation. The
cer of each department will have as a first duty the success of his
department of the service, the fulfillment of the orders he receives.
there is but one steamboat, the quartermaster and the commissary
compete for its control, and the prices of freight will advance.

If there is a scant supply of wagons, of mules, or of oxen, the s
competition will spring up. Instead of one department dealing with
owners of the steamboat, the railroad, the wagon, the inland mule or
train, there will be two, each acting in the interest of the same pa
the United States, but competing and bidding against each other.
too, instead of one department and one set of officers, as heretofore,
structing or renting the requisite store-houses, there will be two com
ing for the lease, and as the quartermaster will have no footing in
commissary store-houses there will be two store-houses erected or h
at the expense of the Treasury instead of one. Responsibility, too,
be divided and weakened. The commissary is to do these things a
his goods leave the railroad or steamer in case the quartermaster is
able to furnish the wagons and has no spare store houses.

There are other provisions in the draft of these regulations, as pri y Congress, H. R. Report 85, which make radical changes in the posiions of large numbers of officers.

The Quartermaster's Department has been recognized by law, and by egulations and orders, as a part of the general staff of the Army. In it romotion and rank are regulated as a part of the staff. These proposed egulations propose to change all this, and to remand certain most imortant departments of the staff to a separate and anomalous condition s parts of a special staff or administrative service or supply-branches f the service.

The experience of many years in this country, and observation of the ourse of military events here and elsewhere, which in the life-time of his generation have been on a very great scale, both at home and broad, have conclusively vindicated the system of this country which ives to all officers of the staff of the Army on whose intelligence, skill, nd zeal the application and support of the physical and moral power of he soldier depend, military rank and military responsibility. This priniple has been lately introduced even into the Navy. It secures a higher rder of service, greater zeal, intelligence, ardor, and integrity, and ow the draft of new regulations proposes to cripple and weaken this ystem by driving these several corps of intelligent officers out of the osition and standing in which they have won honor to themselves, one credit to the Army, and good service to their country in time of its reatest need.

While the system of reports and accounts has been simplified by the ction of the War Department in the publication of these general orders, egislation has introduced into all the accounts of this office, and of undreds of disbursing officers, a serious difficulty and complication. Each officer of the Quartermaster's Department who disburses money as occasion to expend it under several of the different heads of approriation. Though he may have a large sum of money to his credit and ubject to his check, he may be unable to pay a just bill for forage or or services because he has none of that particular appropriation on hand. his increases nearly nine-fold the entries in his accounts. It often occaions delay in payment of the public creditor, and by complicating the ccounts increases the liability to errors and disallowances. Both the fficer and the public creditor suffer, and the Treasury suffers in many ays, as each disbursing officer must have a working balance under ach head of appropriation; the total amount lying to his credit, unsed, in the public depository must be much greater than if, out of any um to his credit, he was allowed to pay any just account. The remedy or this evil—and it is a great one—would be the making of the approriations for the Quartermaster's Department under a single title.

While the total gross sum needed for the service of this Department an be estimated for any ordinary year with considerable accuracy, it s not possible to secure absolute accuracy in each of the million items hich go to make up the sum total, or in the several divisions under hich it has been customary to present these estimates to Congress. t would be much better to appropriate for the Quartermaster's Departent in one gross sum equal to the aggregate of the estimate, and thus implify accounts and secure the prompt and certain payment of the ublic creditor. All dealers now charge something for the risk of delay hich experience shows them that the present system too often causes.

The report of the officer in charge of the branch of this office which xamines the accounts of disbursing officers sets forth in detail the nconvenience and injury to the service arising from this system, and he report (H. R. No. 87, Forty-second Congress, third session) by

the Committee on Expenditures in the War Department, printed
the House of Representatives, also very forcibly presents the case.

The following table, which gives the balances remaining in Treasu
on account of the Quartermaster's Department on the 30th Jun
1873, will show the complication of accounts caused by the requireme
of the law to treat each head of appropriation under each year a
separate and distinct appropriation, to be drawn upon and account
for separately. There are forty-three separate appropriations.

Balances of appropriations undrawn by the Quartermaster's Department, July 1, 1873.

	Prior to July 1, 1870.	1870–1871.	1871–1872.	1872–1873.	1873–187
Regular supplies	$363, 400 86	$82, 068 05	$89, 263 98	$1, 688 55	$4, 500, 00

National cemeteries					275, 00
Clocks for permanent posts	522 00				
Hospitals				15, 473 49	100, 00
Expenses of sales				9, 157 57	
Head-stones				183, 866 25	1, 000, 00
Monument at Salisbury, N. C.				10, 000 00	
Preservation of clothing					50, 00
Total	1, 637, 936 00	259, 505 40	1, 030, 712 12	421, 191 00	14, 812, 13

The number of money-accounts and of property-returns examin
during the past year is not so great as in previous years. This is d
in great measure to the increased difficulty of the settlement und
the act of 3d June, 1870. But at this time all accounts and returns f
years prior to 1873 have been examined, and nearly all those for first qua
ter of 1873 have been examined. Those for the second quarter of 18
are now in course of examination, and the examination of those for t
third quarter, which has just closed, will be commenced before all a
received from officers. The work of examination may therefore be sa
to be up to date.

The Quartermaster's Department is charged with the duty of provi
ing the means of transportation, by land and water, for all troops a
all material of war. It furnishes the horses of the artillery and caval
and horses and mules for the trains. It provides and distributes clot
ing, tents, camp and garrison equipage, forage, lumber, and all ma
rial for camps and for shelter of troops and of stores. It builds b
racks, hospitals, store-houses; provides wagons and ambulances a
harness, except for cavalry and artillery horses; builds or charte
ships, steamers and boats, docks and wharves; constructs and repai
roads, railways, and bridges; clears out obstructions in rivers and h
bors when necessary for military purposes; provides, by hire or pu
chase, grounds for military encampments and buildings; pays, general
all expenses of military operations not by law expressly assigned to so
other department; and, finally, it provides and maintains military ce
eteries, in which the dead of the Army are buried.

Food, arms, ammunition, medical and hospital stores are purchas
and issued by other departments, but the Quartermaster's Departme
transports them to the place of issue, and provides store-houses for th
preservation until consumed. The corps of officers upon whom all the

nties fall has been reduced by time until it is not able to fill well every ost at which an officer of activity and ability is needed. Its ranks hould be now opened to promotion and appointment.

Many officers of the line, finding themselves charged with heavy reonsibility as acting assistant quartermasters, and having insufficient ssistance, at frontier posts, ask that the enlistment of post quarteraster-sergeants may be allowed by law. Such non-commissioned fficers, selected for experience and fidelity shown in actual service, ould be very useful. They would remain at posts in charge of the roperty when the garrison changed, and thus would preserve knowldge and responsibility now often lost through the frequent change of fficers. Such officers also ask that some compensation may be granted hem for the risk which they incur in the disbursement of public money, nd for the responsibility involved in the care of large amounts of pubc property.

I have the honor to renew the recommendation heretofore made, that n allowance of $10 per month be made in addition to the pay of every ne-officer who is detailed by proper authority as acting assistant quarermaster of a military post, when such detail is properly reported to nd approved by the War Department. Such an allowance is only just, nd it would relieve the service from the feeling that heavy duties are nposed by such detail without any recognition or compensation. Such uties are important, and they should be sought by good officers, not nposed upon the slothful or unwilling.

About three hundred and eighty officers of the line act every year for ome portion of the time as acting assistant quartermasters.

The officers of the regular establishment of the Quartermaster's Deartment, all of whom have served through the late war and have had nuch experience, are stationed at the more important depots and posts. et many posts, involving heavy responsibility in money and property, nd calling for good judgment, integrity, and zeal, are occupied by sublterns of the line, on duty as acting assistant quartermasters.

The expenditures of the Quartermaster's Department have been disributed throughout the country among the several military departments nd divisions, and the principal purchasing and supply depots, as folows:

emittances to disbursing officers in the Military Division of the Atlantic		$448,872 59
Of which there was sent to—		
epartment of the East	$335,267 20	
epartment of the Lakes	113,605 39	
o the Military Division of the Missouri		6,230,133 79
Of which there was sent to—		
epartment of the Missouri	1,024,892 80	
epartment of the Platte	1,135,670 93	
epartment of Dakota	854,154 35

Benicia arsenal, Cal	4,148 73	
Detroit arsenal, Mich,	892 46	
Rock Island arsenal, Ill	3,597 68	
Total amount remitted		13,365,188

Remittances from the appropriation for the fiscal year ending Ju 30, 1873, have been made as follows:

Regular supplies:		
Fuel	$1,128,956 68	
Forage	3,197,430 06	
Straw	84,801 60	
Stationery	94,894 89	
Stoves	88,615 23	
Total regular supplies		$4,594,700
Incidental expenses		1,300,380
Horses, cavalry and artillery		292,714
Barracks and quarters:		
Rent of quarters for officers	$323,092 00	
Rent of store-houses, offices, commutation of quarters for enlisted men, &c	312,318 03	
Building-material for repairs	550,161 64	
New buildings authorized	281,356 26	
Total barracks and quarters		1,466,928
Army transportation		4,325,601
Clothing and equipage		858,412
National cemeteries		250,729
Hospitals		84,526
Stoves		10,000
Preservation of clothing and equipage from moth and mildew		150,000
Mojave claims, (special appropriation)		14,219
Head-stones		16,133
Expenses of sales		842
Total amount remitted		13,365,188

INSPECTION BRANCH.

To this branch of this office are committed the keeping of records stations and duties of officers, of correspondence, the examination reports of inspection, of reports of boards of survey, the filing and pr servation and distribution of orders and circulars. Through this branc of the office about 180,000 papers pass and are recorded yearly. Lis of the officers of the Quartermaster's Department, and of officers of t line who have served in the Quartermaster's Department during t year, with their stations and duties, will be found attached to t report.

INDEBTED RAILROAD COMPANIES.

At the close of the war, under executive orders of 8th August and 14th October, 1865, there were sold on credit to various railroad companies, principally in the South, railroad material to the appraised value of..	$7,556,033 95
There remained due and unpaid from certain of these railroads on 30th of June, 1872	4,734,442 43
During the past fiscal year, interest and expenses accrued upon this debt to the amount of	101,573 95
Payments during the year, on account, have amounted to	151,303 44
On the 30th June, 1873, the debt uncollected amounted to	4,658,924 07
exclusive of the sum of $25,788.87 due from the New Orleans and Ohio Railroad, which debt is lost by the bankruptcy of the company. The total collections on account of this debt, to 30th June, 1873, amount to	5,116,605 53

The earlier collections, being reimbursements of the Quartermaster's Department for property originally purchased with its appropriations, were applied to its service, reducing the amounts of the annual estimates for appropriations; but since the passage of the law of May 8, 1872, requiring all proceeds of sales of public property to be deposited in the Treasury, to credit of miscellaneous receipts, these collections have taken that course. Fifty railroads originally availed themselves of the privileges of the executive orders. Thirty of them have paid their debts in full with interest. Twenty now remain in debt to the United States on this account.

A full statement of these accounts accompanies this report; to it reference is made for detailed information.

Against some of the roads greatly in default suits have been commenced in the United States courts.

Since my last report the suit against the Nashville and Decatur Railroad has been compromised and settled by the Secretary of War, under authority of the act of 3d March, 1871, (16 Stat., chap. 119) for the sum of $70,000, of which $6,000 was paid in cash, the balance to be paid in ten years from 1st July, 1872, with interest, semi-annually, at the rate of 5 per cent. per annum, secured by bond and lien upon the property of the company, guaranteed by the Louisville and Nashville Railroad, and by decree of the United States circuit court affirming the liability, and to be enforced by execution in case of default.

Other suits are yet unsettled, for details in reference to which I refer to the report of Major Ludington, the officer in charge of the transportation branch of this office, which accompanies this report.

Some of the roads largely indebted to the Government, and which have given bond for the application of their postal earnings to the payment of their debt, refuse or persistently neglect to give the order for the payment of their earnings, which, in the judgment of the Post-Office Department, is necessary, before the money can be thus applied. Some of these earnings have thus, under the law, lapsed into the Treasury; other considerable amounts are locked up. They are not turned over to the roads, but not being turned over to this Department it cannot credit the debt account of the railroads with them.

Some provision of law for the collection of this money and settlement of the debt, so far as it will go, is desirable.

TRANSPORTATION.

The General Order No. 98, of 1872, establishing the improved system of transportation, has been distributed to officers of the Army and to all railroads and transportation companies having dealings with this office. It is found to be satisfactory to the officers and to the pub with whom they deal.

The total movement of transportation during the year, thus far r ported, amounts to 72,860 persons, 8,148 beasts, and 164,125,223 poun of material.

The cost of railroad transportation during the year amounts $1,235,579.43, of which accounts for $921,514.87 have been settled transmitted by this office to the Treasury for settlement.

The movement over the Pacific Railroad has been:

Name of railroad.	No. of persons moved.	No. of beasts moved.	Freight pounds.
Union Pacific	6, 166	1, 763	21, 697,
Central Pacific of California	3, 034	63	2, 444,
Kansas Pacific	1, 951	390	5, 711,
Sioux City and Pacific	223	36	3, 544,
Total	11, 374	2, 252	33, 397,

The cost of this service is estimated at:

For the Union Pacific Railroad	$445, 501
For the Central Pacific Railroad	136, 598
For the Kansas Pacific Railroad	149. 797
For the Sioux City and Pacific Railroad	2, 402
Total value of service of the Pacific railroads during the year	734, 298

Until the passage of the act of 3d March, 1873, one-half the earnin of these roads for military transportation was paid in cash, on proof service, and the other half was retained by the Treasury to be used payment of the interest on the United States bonds issued to the Since the passage of that law the whole of these earnings have bee withheld by the Secretary of the Treasury, but it is charged against t appropriations for transportation of the Army.

The earnings of the Pacific railroads in the previous fiscal yea ending June 30, 1872, were $800,857; in the year ending June 30, 187 $767,047.99.

WAGON AND STAGE TRANSPORTATION.

By wagon we moved during the year 756 passengers, 32,004,635 poun of material; by stage, 1,380 passengers, 3,648 pounds of material. T cost of wagon transportation was $997,943.44; of stage transportatio $59,319.29.

Thirty-two contracts for wagon transportation are reported duri the year.

The existing contract for wagon transportation from the line of t new Atchison, Topeka and Santa Fé Railroad, and from the Kansa Pacific and Denver and Rio Grande Railroads, to posts in the Depa ment of Missouri, and in Texas and New Mexico, and to Camp Apach Arizona, is at the rate of 90¾ cents per 100 pounds per one hundred mile This is a considerable reduction from the previous contracts, whic averaged $1.17½.

The existing wagon contract rates in Texas generally show a materi reduction in price, attributable to the extension of railroads into t interior, the shortening of the wagon routes, and the avoidance of t routes through the heavy soils and wet climate of the coast.

On the Pacific coast the rates have slightly increased. The demand for transportation due to the Modoc war, carried on during the rainy season, will account for this increase. That campaign was very destructive to the means of transportation.

WATER TRANSPORTATION.

By water the movement has been of 37,789 persons and 2,026 beasts, and 55,467,201 pounds of stores. The cost of this, so far as the bills have been settled, was $760,973.58.

Three small steamers and two schooners owned by the United States have cost during the year $37,413.19. Twelve vessels have been hired or chartered during the year, at a cost of $43,056.76. Both these sums are included in the aggregate cost of transportation by water, reported above..

During the past fiscal year accounts and claims for transportation service rendered in previous years have been paid, or transmitted from this office to the Treasury for payment, amounting to $652,409.17.

CONTRACTS FOR REGULAR AND MISCELLANEOUS SUPPLIES.

During the year 614 contracts for supplies were reported to this office, as follows: For forage, 230 contracts for 20,318,814 pounds of oats or barley, 19,372,472 pounds of corn, 30,744 tons of hay, 439,000 pounds of bran; 11 for 2,508 tons of straw; 30 for 22,011 tons of coal; 144 for 84,022 cords of wood; 37 for 49,075 bushels of charcoal; 4 for construction of quarters; 47 for transportation; 7 for horses and mules; 12 for clothing, camp and garrison equipage; 16 for national cemeteries, and many for miscellaneous supplies and services.

FORAGE, STRAW, AND FUEL.

The issues of these supplies have been: Corn, 588,488 bushels; oats, 939,690 bushels; barley, 172,870 bushels; hay, 48,588 tons; fodder, 116 tons; straw, 3,292 tons; bran, 55,084 bushels. Of wood, the issue was 130,786 cords; of anthratic coal, 16,937 tons; of bituminous coal, 15,300 tons.

ANIMALS.

One thousand nine hundred and thirty-eight horses, costing $255,460.19, were bought during the year. The average cost in California was $110.11; in the Department of the Columbia, $115; Department of the Missouri, $126.36; in Texas, $132.46; Dakota, $139.

In addition to occasional purchases of horses to supply losses, 1,200 remounts were authorized this spring for the several cavalry regiments, as follows: For First Cavalry, none; Second Cavalry, 175; Third Cavalry, none; Fourth Cavalry, 175; Fifth Cavalry, 150; Sixth Cavalry, 100; and Seventh, Eighth, Ninth, and Tenth Cavalry, each 150. Those for the Second, Sixth, Seventh, and Tenth Regiments were purchased in Missouri, Iowa, and adjoining States; those for the Fifth, in California; those for the Fourth, in Texas; those for the Eighth, at Leavenworth and in Colorado, and those for the Ninth, at points designated by the general commanding Department of Texas. These purchases were made by boards of officers assembled by the department commanders, each board consisting of a quartermaster and one or two

officers of the regiment for which the horses were intended. The boa
moved through the districts assigned for their operations; publis
their wants by posters, and purchased from farmers and stock-rais
direct, without intervention of middlemen. The result has given sat
faction, and the system secured good horses at fair prices.

MULES.

Two thousand three hundred and ninety-seven mules were purcha
for the trains at a cost of $328,033.02. The greater number of th
were bought for the expedition to escort the Northern Pacific Railro
surveying party from Fort Abraham Lincoln, on the Missouri, to a
beyond the Yellowstone River. The average cost of mules was $1

One thousand and fifty-one horses were sold for $46,624.43; 2
mules, for $9,313.06. The proceeds, $55,937.49, have been deposited
the Treasury to the credit of miscellaneous receipts.

Four hundred and twenty-four horses and 489 mules are reported
have died, and 158 horses and 100 mules to have been lost or sto
during the year, and the number in service at the close of the year w
10,130 horses and 10,425 mules.

ARMY WAGONS AND HARNESS.

There are reported in service 3,107 wagons, 125 spring-wagons, 2
ambulances, 23,411 sets of wagon-harness, 2,148 sets of ambulance-h
ness, all serviceable.

The stock of wagons in the Army has suffered by use and age. Ev
those kept in store have deteriorated by dry-rot and by attacks of inse
to which hard timber is liable, so that many of those in use were un
liable and unfit to be used on a long march. The Yellowstone ex
dition, in Department of Dakota, was outfitted with a new train, a
many new wagons have been sent to other departments to replace th
which had failed or threatened to fail.

Five hundred and fifty new wagons were purchased during the ye
Two hundred and fifty, purchased in open market to meet the emerge
of the immediate outfit of the Yellowstone expedition, cost $175 ea
Contracts were made for the others, giving more time for the manuf
ture, at $149.50 each.

The train-wagon used for many years in the operations of the Unit
States Army before the war is of excellent design and constructi
In the very dry climate of the higher plains, and in the deserts of
Colorado and Gila, exposed to a scorching heat, and in an atmosph
without moisture, the timber shrinks and cracks. The wagon-build
of this country have for several years been experimenting with meta
hubs, many of which have been patented. Of some of the best
these, many thousands are now annually made and put into use. I
lieve that some of them will prove to be better fitted for use in the
tremely dry climates than wood, and samples of each of those wh
appeared to be best have been purchased and distributed to posts in
most trying climates for trial. The change is an important one, and
not be made, generally, unless the result of these trials is conclusive
favor of some one of the metallic hubs.

HORSE-SHOES AND SHOEING-MATERIAL, SMITHS' AND SADDLERS' TOO

Under the provisions of General Orders No. 2, War Department,
jutant-General's Office, January 2, 1873, the supply of tools and of sh

for shoeing cavalry and artillery horses was transferred from the Quartermaster's Department to the Ordnance Department, and large quantities of these materials and tools purchased by the Quartermaster's Department have, under that order, been transferred to the officers of the Ordnance Department.

The Quartermaster's Department must still keep smiths and tools for repair of its wagons, and for shoeing the draught animals, at every post, and when there are, as is frequently the case, no enlisted farriers with a body of cavalry, its officers are still called upon to provide for shoeing their horses. Thus two establishments are kept up throughout the military service to do the same thing, which appears not to be an efficient or economical arrangement.

EPIZOOTIC.

The epidemic catarrh which traversed the continent during the past year, visited, it is believed, every military post, and attacked a great majority of the horses and mules of the military establishment. It appeared early in New York and its vicinity, and a method of treatment adopted by Brevet Major-General Ingalls, assistant-quartermaster general, upon the advice of the veterinary surgeons of New York, was printed and distributed to military posts:

HEADQUARTERS DEPARTMENT OF THE EAST,
OFFICE CHIEF QUARTERMASTER,
New York City, October 28, 1872.

[Circular.]

The attention of officers and agents in charge of public animals belonging to the Quartermaster's Department in the Department of the East is called to the "epizootic catarrh" now prevalent among horses. They are directed to observe the following rules for the treatment of this disease, and to report results to this office at the end of the present month, and every ten days thereafter, until the disease disappears.

It is assumed that the stables are always kept clean, dry, and well ventilated, with plenty of fresh air and sunlight, when possible. It is also assumed that the horses are never overworked, but properly exercised at all times, whether sick or well, and that they are fed with wholesome forage, regularly groomed, and kept warm.

RUFUS INGALLS,
Col. and Asst. Q. Gen., Bvt. Maj. Gen., U. S. A., Chief Quartermaster.

Rules for the treatment of the disease.

On the first appearance of the disease give the horse a thorough steaming with hot-boiled oats, placed in a bag, and so fastened to the head that the steam from the oats will be inhaled. Repeat this until the discharge from the nostrils is free and of a natural color. Then take leather, or, what is better, carbolic disinfectant, in grains like large-sized cannon-powder, place it in a shallow pan, and burn it where the horse will be obliged to breathe it.

If the throat is sore, (which generally will be the case,) apply frequently hot vinegar, rubbing it well with the hand, and wrap the throat in flannel, dipped in vinegar. Sponge out the nostrils frequently with warm vinegar. Blanket well, night and day, but not enough to produce sweating, and give plenty of fresh, clean bedding.

Give several bran mashes, with from one-half to one ounce of powdered niter in each, and use linseed-meal or flax-seed in the oats. Use tepid water in the mash.

The hay and oats should be moistened with water—preferably tar-water.

Most cases if taken in time will yield to the above treatment; but should the attack be very severe, accompanied with considerable fever, and very sore throat, instead of the vinegar, an embrocation of equal parts of linseed-oil, turpentine, tincture of cantharides, and hartshorn should be rubbed in night and morning.

Powell's embrocation is very good.

Give as a drench, night and morning, the following:

Spirits of nitric ether	1 ounce.
Laudanum	4 drams.
Nitrate of potassa	3 drams.
Water	1 pint.

Mix.

Should the horse refuse his feed, offer him frequently thin gruel, with a handf
pulverized slippery-elm bark, and licorice-root stirred in it.

When convalescing, exercise gently daily, and stimulate the appetite with
following ball:

Extract of gentian	6 d
Powdered ginger	2 d

Mix.

A handful of wood-ashes mixed with a little salt, thrown into the feed-troug
the horse to lick up, will be relished by him and be beneficial.

At a later date the Secretary of War communicated to this o
the following simple prescription, with directions to communicate i
all officers of the Army in charge of public animals:

One teaspoonful of chlorate of potash twice a day to four horses, put in a pa
water, and let each horse drink his proportion.

These two prescriptions were thus made known. The losses by de
from the disease were very small, but the operations of supply v
everywhere delayed and deranged as long as the disease prevailed.
was very hurtful, during its prevalence, among the animals employe
hauling supplies to the troops operating against the Modocs, and f
time it dismounted the cavalry in that campaign, as also in Arizona

THE YELLOWSTONE EXPEDITIONS.

In the summer of 1872 an expedition left the Missouri River to es
a party of engineers to explore a line for the Northern Pacific Railr
to the valley of the Yellowstone. This march showed that the wag
trains, composed of wagons purchased during the war, had outli
their usefulness, and for the larger expedition organized in the mo
of June of the present year, it was necessary to procure a large n
ber of new wagons and many mules. One hundred and fifty
wagons were supplied, which, with about fifty reported to be good
available in Dakota, completed the train; 1,058 mules were purcha
and forwarded to Fort Abercrombie, where the mules were brok
organized into trains, fitted with harness, and supplied with teamst
under the direction of Captain Dandy, assistant quartermaster, du
the months of April and May. This train consisted of two hun
and two 6-mule teams and wagons, nine spring-wagons, with four m
each, two 6-mule artillery teams, and twelve riding mules for the wag
masters.

One 6-mule wagon and one 4-mule spring-wagon and their tea
and nine saddle-horses, were also supplied for the use of the scien
commission, which, under authority of the Secretary of War, acc
panied the expedition into this wild country.

The organization of this train was a laborious and difficult work,
its completion in so short a time is creditable to the officer in charg

The following is an extract from the annual report of Capt. G
Dandy, assistant quartermaster, Fort Abraham Lincoln, Dak., who
ganized the trains:

> On the 21st of April I received instructions from the chief quartermaster of
> department relative to organizing army-wagons for service with the proposed Yel
> stone surveying expedition. I was at that time in charge of the depot of trans
> tation at Fort Abercrombie, consisting of three hundred and sixty-five mules and sev
> wagons, which was further increased by the addition of ten hundred and seventy
> mules and one hundred and sixty wagons to be organized and added to the depot-t
>
> On the 27th April the mules and wagons, with the necessary harness for fitting
> one hundred and fifty 6-mule teams for service with the exploring and surveying p
> of the Northern Pacific Railroad west of the Missouri River, commenced arrivin

reckenridge, Minn., fifteen miles from Fort Abercrombie. The last shipment of ani- ials and material arrived on the 26th of May. The teamsters were hired in Saint aul, with the exception of fifty hired on my recommendation at Fort Leavenworth, ans. These latter were the only men sent me having any experience in the manage- ent of 6-mule teams, and many of the men employed at Saint Paul were vicious or orthless characters. About 25 per centum of the mules sent to me from Saint Louis ere very wild, and required throwing or placing in the stocks to shoe. Many had to e thrown in order to harness them; and there were many other difficulties in the ay of organizing this mass of raw men and material for efficient service in so short a me. The train, however, was completely shod and equipped and *en route* to the Yel- wstone on the 29th May. It consisted of two hundred and two 6-mule teams, nine -mule teams for spring-wagons, two 6-mule teams for artillery, and some 12 riding- ules for wagon-masters. In addition, there were one 6-mule team, one 4-mule spring- agon and team, and nine riding-horses provided for the use of the scientific party ccompanying the expedition. Special attention was paid to fitting the train amply ith spare parts, and blacksmiths', saddlers', and wheelwrights' supplies.

MODOC CAMPAIGN.

Summary of expenditures, indebtedness, &c.

isbursements as reported by Captain Hoyt	$120,881 20
scertained indebtedness, as reported by Captain Hoyt	70,990 03
ransportation of 754,257 pounds from San Francisco, at 15 cents	113,138 55
rain from Camp Halleck, consumed, cost at camp Halleck	5,000 00
ransportation of grain from Camp Halleck, consumed, rough estimate	25,000 00
	335,009 78

Items of expenditure not yet definitely reported to this office:

Cost of stores in San Francisco.

Cost of transportation of ordnance stores, &c., from Benicia arsenal; eight unknown.

Cost of transportation to Fort Klamath of over 200,000 pounds of rain and other supplies and stores remaining at the close of the cam- aign.

BARRACKS AND QUARTERS—MILITARY BUILDINGS.

During the year the construction of one hundred and twenty new uildings has been authorized, at an estimated cost of $245,544.87.

They are barracks for men, quarters for officers, stables, store-houses, uard-houses, bake-houses, &c. They are at military posts distributed rough the following States and Territories: California, Louisiana, Flor- la, Michigan, South Carolina, North Carolina, Tennessee, Texas, Kansas, ew York, Maryland, Oregon, Nevada, Kentucky, Georgia, Nebraska, ennsylvania, Minnesota, Maine, Iowa, Connecticut, Virginia, Dakota, ew Mexico, Montana, Washington, Arizona, Utah, Colorado, the In- ian Territory, and the District of Columbia.

WHARVES.

The expenditure of $18,111.32 in repair and construction of wharves various posts has been authorized.

REPAIRS.

Upon special estimates submitted to the Secretary of War, repair and terations of military buildings to the amount of $228,796.49 have been thorized. Many small repairs, making in the aggregate a large sum, ere also made under authority of local commanders, without special ference to the War Department for authority.

NEW POSTS ESTABLISHED.

The construction of two new posts in Arizona has been authorize one near Tucson and one near the mouth of the San Carlos Ri These posts are designed for garrisons of four companies each.

The orders of the Secretary required the labor of the troops to be ployed when possible, and limited the expenditure upon the two p to $35,000.

The post near Tucson is Camp Lowell; that on the San Carlos is Camp Grant, and they take the places of Tucson Depot and Old Ca Grant, which latter was in a very unhealthy, malarious location.

Erection of huts for one company of infantry at Otter Crossing, the line of the Northern Pacific Railroad, was authorized in Octo 1872.

A post known at first as Fort Cross, now named Fort Seward, been erected on the James River, Dak., on the line of the same railro

Fort Abraham Lincoln has also been built at the Missouri crossin the railrod.

New posts have been commenced at Tulerosa, N. Mex., and at Bea City, Utah.

New buildings, alterations, repairs, or additions have been authori at posts in—

The Department of California, to cost	$48,640
The Department of Texas, to cost	44,143
The Department of the East to cost	75,207
The Department of the South, to cost	15,810
The Department of the Platte, to cost	51,012
The Department of the Gulf, to cost	42,360
The Department of the Columbia, to cost	9,490
The Department of Arizona, to cost	62,707
The Department of the Missouri, to cost	151,795
The Department of Dakota, to cost	78,120
The Department of the Lakes, to cost	839
Total	580,127

Of this sum, however, construction, repairs, &c., to the amount $122,060, though authorized during the fiscal year, were ordered to deferred until, after the 1st July of the present year, the new app priation became available. The works, though needed, could not executed with the appropriation of the past year.

FIRE-PROOF BUILDING AT JEFFERSONVILLE.

This building has been occupied. The stores, heretofore in wood buildings scattered over a large space, in constant danger of fire a depredations, involving heavy expense for protection against both th dangers, have been all removed to the new building, properly clas and arranged for easy access, and safe against damp and fire.

An elevated reservoir, kept by a steam-pump constantly filled w water from a pool within the depot, affords the means, through pipes a hose, of instantly subduing any fire occasioned by incendiary attem or by spontaneous combustion.

A single watchman in the tower has constantly in view the doo every store-room. The cost of watching and guarding the propert thus greatly reduced.

The old buildings have been demolished and the materials sold.

TRANSFERRED FROM THE QUARTERMASTER'S DEPARTMENT.

Seven buildings at Clark's Point, Me., and thirteen at Fort Washington, Md., have been transferred to the Engineer Department, and the State arsenal at Savannah, Ga., held by the United States since the occupation of that city by the army of General Sherman, has been given up to the State.

GROUNDS SURRENDERED, SOLD, ETC.

Under the act of 25th February, 1873, the land at Wilmington, Cal., occupied by the United States, was ordered to be reconveyed to those who had originally conveyed it to the United States; the buildings thereon erected by the United States being first removed or sold. The buildings have been sold at public auction, and the land will be duly restored to its original owners.

Application has been made for the restoration to the donors of certain lands at Omaha, originally conveyed to the United States in consideration of the sum of $10, for the purpose of erection thereon of headquarters' offices and quarters for the department staff. The site is not a convenient one for the purpose, and the matter of reconveyance is before the Secretary of War.

The barracks at Houlton being no longer in use the buildings were sold at public auction, and Congress, by act of March 14, 1872, authorized the Secretary of War to sell the site, reserving to the county of Aroostook so much thereof as may be necessary to preserve the meridian monuments thereon erected by consent of the War Department: *Provided*, The land so granted to the county shall not exceed in value $500. The land not thus reserved, amounting to nearly 25 acres, was duly sold at auction, on 19th June, 1873, for the sum of $350. A deed to convey the portion reserved, whose value is much less than $500, is before the War Department for execution.

The act (17 Stat., p. 614) for procuring title to sites of military posts in Texas, approved 3d March, 1873, has not yet enabled the Department to perfect any title. A board of officers is now in session in Texas for the purpose of endeavoring to execute the law. This office has furnished the board with copies of all records bearing upon the subject which can be useful to them.

ARTESIAN WELLS.

An artesian well sunk at Madison Barracks, N. Y., under authority given in October, 1870, is a success. It affords an unfailing supply of good water. Its depth is 99 feet; the cost was $550. Two more are needed, and their construction has been authorized.

By the law of June 8, 1872, the Secretary of War was authorized to

Fort Shaw, Mont	$

BUILDINGS TRANSFERRED FROM THE QUARTERMASTER'S DEPARTM

Seven buildings at Clark's Point, Me., and thirteen at Fort W ington, Md., have been transferred to the Engineer Department the State arsenal at Savannah, Ga., held by the United States sinc occupation of that city by the army of General Sherman, has been up to the State.

GROUNDS SURRENDERED, SOLD, ETC.

Under the act of 25th February, 1873, the land at Wilmington, occupied by the United States, was ordered to be reconveyed to who had originally conveyed it to the United States; the buil thereon erected by the United States being first removed or sold. buildings have been sold at public auction, and the land will be restored to its original owners.

Application has been made for the restoration to the donors of ce lands at Omaha, originally conveyed to the United States in cons ation of the sum of $10, for the purpose of erection thereon of quarters' offices and quarters for the department staff. The site is convenient one for the purpose, and the matter of reconveyance is b the Secretary of War.

The barracks at Houlton being no longer in use the buildings sold at public auction, and Congress, by act of March 14, 1872, au ized the Secretary of War to sell the site, reserving to the coun Aroostook so much thereof as may be necessary to preserve the meri monuments thereon erected by consent of the War Department: *vided*, The land so granted to the county shall not exceed in value The land not thus reserved, amounting to nearly 25 acres, was duly at auction, on 19th June, 1873, for the sum of $350. A deed to co the portion reserved, whose value is much less than $500, is before War Department for execution.

The act (17 Stat., p. 614) for procuring title to sites of military in Texas, approved 3d March, 1873, has not yet enabled the Depart to perfect any title. A board of officers is now in session in Texa the purpose of endeavoring to execute the law. This office has furni the board with copies of all records bearing upon the subject which be useful to them.

ARTESIAN WELLS.

An artesian well sunk at Madison Barracks, N. Y., under auth given in October, 1870, is a success. It affords an unfailing suppl good water. Its depth is 99 feet; the cost was $550. Two more needed, and their construction has been authorized.

By the law of June 8, 1872, the Secretary of War was authorize

xpend $10,000, or so much thereof as might be necessary, in boring for
ater at Fort D. A. Russell, near Cheyenne Depot, Wyoming. The
te of this post is on the dry plains, at the base of the Rocky Moun-
ains, 6,000 feet above the sea-level.

As no one could be found willing to contract to sink a well to water
this unexplored soil, the tools were purchased by the United States,
nd a skillful and experienced person was employed to direct the oper-
tion. After boring to a depth of 410 feet through drift, the first well
as abandoned, having caved in and injured its tubing to such a degree
at it was considered cheaper to begin a new well than to attempt to
nk the first deeper. The expenditure to the time this first well was
bandoned was $8,195.38.

The new well has been sunk through the same strata to a depth of
17 feet, and the expense has amounted to $6,164.62. The last 152 feet
this well are in impervious strata of clay, and as there is a large ex-
nt of country within forty miles rising to a height of 2,000 feet above
e site of the well, there is good ground for the hope that beneath
ese strata, impervious to water, a gravel or fissured rock, saturated
ith water, may be found.

The exploration will be of value, if successful, by showing that water
n be obtained; and if unsuccessful, by preventing others from throw-
g away money in future. I have, therefore, advised that it be con-
nued until the stratum is pierced, or until the difficulties of penetrat-
g deeper become insuperable.

The expenditure thus far has been $14,360; but the cost per foot of
e second well has been much less than that of the first. This is due
the knowledge gained in the first boring. Boring began on the 27th
November, 1872. On the 16th of May, 1873, at a depth of 410 feet,
is well was abandoned. Expenditure to this date, $8,195.38. Second
ell begun on the 22d of March, 1873, and the following are the results:

Strata.	Depth of each stratum.	Total depth.	Date.
	Feet.	*Feet.*	
avel, clay, and sand	75	75	Mar. 31, 1873
apstone	20	95	April 1, 1873
apstone and mixture of fine gravel	65	160	April 4, 1873
avel and mixture of clay	50	210	April 5, 1873
d shale	190	400	April 8, 1873
d shale, with gravel and indurated clay	20	420	April 10, 1873
anite	10	430	April 12, 1873
apstone	20	450	April 13, 1873
apstone, very soft	62	512	April 15, 1873
avel and quicksand	28	540	June 13, 1873
hite indurated clay	18	558	June 30, 1873
icksand	7	565	Aug. 5, 1873
hite indurated clay	15	580	Aug. 15, 1873
hite indurated clay, a little harder	35	615	Aug. 19, 1873
hite indurated clay, a little harder	52	667	Aug. 21, 1873
e clay	3	670	Aug. 21, 1873
y, black, with indications of coal	5	675	Aug. 23, 1873
e clay	18	693	Sept. 9, 1873
y	7	700	Sept. 13, 1873
e clay	17	717	Sept. 15, 1873

The sum of $14,360 has thus far been granted for artesian wells at
is post. On September 6, 1873, it was reported that $13,000 had been
pended. It is, therefore, reasonable to suppose that the balance of
e funds ($1,360) has been, or was very nearly, exhausted by Septem-
r 15, 1873; which would make the cost of the second well thus far
,164.62.

POSTS ABANDONED.

During the year the posts of Taylor Barracks, Ky.; Old Camps G
and Lowell, and Crittenden, Ariz.; and Fort Phœnix, Mass., have
abandoned.

FIRES.

Some 5,000 buildings are under the care of this Department. Mo
them are of rude and temporary construction, and very liable to fir

Seven fires at military posts have been reported during the

Such provision to contend against fires as it is possible to make a
military posts has been made. The fire-extinguisher, which by a
of sulphuric acid on a solution of bi-carbonate of soda in a close v
throws a small stream of water some forty feet, has been extensi
distributed, and has saved a great quantity of property at mil
posts. A small, portable hand force-pump, known as Johnson's,
lately been tried in this city with such satisfactory results that it
been adopted as a part of the fire-apparatus to be supplied to mili
posts.

MILITARY RESERVES.

Seven military reserves have been declared by the Executive du
the year: Fort Whipple, Va., 26th July, 1872; Camp Harney, O
2d December, 1872; Sibley Island, Dak., 11th February, 1873;
Abraham Lincoln, 11th February, 1873; Fort Boise, Idaho, 9th A
1873; Beaver City, Utah, 12th May, 1873, and a reserve of timber-
for military purposes in Arizona, 20th June, 1873.

PUBLICATIONS.

A list of military posts, with short descriptions of the buildings
situation, and the resources of the vicinity, has been published and
tributed.

A short tract on construction in pisé and in concrete, the fo
extracted from Cresy's Dictionary of Civil Engineering, the latter
nished by the acting assistant quartermaster at Sidney Barracks
been also published and distributed. Both of these methods of buil
are better than adobe, and there are few locations in which the
skilled labor of a garrison will not be sufficient to erect all neces
walls of the quarters, store-houses, and stables in one of these st
with very little expense, if directed by intelligent officers.

The appropriation for barracks and quarters did not prove suffi
to meet the urgent demands made upon it, and toward the close o
fiscal year all new construction and repairs were arrested by ord
the Secretary of War for want of funds. Still the rents and re
expenses which it was not possible to terminate have exceeded
amount available and given rise to a deficiency estimate.

POST CEMETERIES.

As the wilderness is settled, the military posts on the old emi
routes are abandoned. At those occupied for many years are c
teries containing the graves of soldiers who fell in protecting the
grant from the savage, and the graves also of pioneers who lost
lives in settling the wilderness.

As the cost of properly and permanently inclosing these ceme
in some positions is very great, arrangements have been made to re

he bodies. Those at old Fort Kearney and Sedgwick are to be removed to Fort McPherson, where they will be re-interred, and a permanent cemetery will be inclosed.

We have reports from 113 post cemeteries, which will be duly recorded and preserved.

NATIONAL MILITARY CEMETERIES.

The number of interments in the national military cemeteries by last year's report was 317,962. One hundred and forty-eight Union soldiers have been added to the list during the year. None have been removed. The number of the known is 170,187; unknown, 147,823.

A new national cemetery is being established at Fort McPherson, Nebr., to which the bodies of those who have fallen in the Indian fights of that frontier and been buried at neighboring posts, abandoned with the progress of settlement, are to be removed.

The cemetery established on the occupation of the city of Mexico by the Army of the United States has, under a law approved on 3d March, 873, been designated a national military cemetery, and placed under the guardianship of the Secretary of War and subjected to the laws regulating other national military cemeteries. Reports and estimates of necessary improvements have been received from the consul-general of the United States, and their execution, approved by the Secretary of War, has been commenced. One of them is the sinking of an artesian well to supply water for irrigation, necessary in that dry and elevated position.

During the year brick-inclosing walls have been completed or are now building at the cemeteries of Newbern and Raleigh, N. C., Beaufort and Florence, S. C., and Memphis, Tenn.; stone walls at Danville, Glendale, Seven Pines, and Staunton, Va., at Salisbury, N. C., and Forts Leavenworth and Scott, Kans.

Superintendents' lodges have been completed during the year or are being erected at Danville, Glendale, and Seven Pines, Va., at Raleigh and Wilmington, N. C., Camp Nelson, Logan's Cross-Roads, and Lebanon, Ky., Memphis, Chattanooga, Fort Donelson, and Knoxville, Tenn., and at Fort Smith, Ark.

There remain to be provided for permanent inclosures at Andersonville, Ga., Fort Gibson, Indian Ter., Grafton, W. Va., and Fort McPherson, Nebr., and permanent lodges at Grafton, W. Va., Beverly, N. J., and Fort McPherson, Nebr.

The superintendents employed at the several cemeteries have had the aid of more labor during the past year, and an improvement in the keeping of the cemeteries is reported. The work of drainage is being prosecuted at those where it is most needed, as rapidly as the means allowed by Congress will justify.

A handsome stone gateway has been built at the Nashville cemetery, on the same design as that at Arlington, but of a local limestone of a different color.

Four civil engineers have been employed and stationed at central points in order to superintend the work of contractors upon permanent inclosures, and lodges and drainage, and to lay out such works.

HEAD-STONES.

The law of 3d March, 1873, (chapter 229, section 1, 17 Statutes,) appropriates $1,000,000 for erection of head-stones on certain conditions.

Advertisements and specifications, copies of which accompany report, have been published. The Secretary had decided that the h stones should be of white marble or granite, four inches thick, an widths and lengths described in the specifications herewith.

The list of graves requiring head-stones does not embrace those in separate national military cemeteries, nor the unknown at Salisb for which cemetery a special provision of law directs a single monu of granite to be erected. The difference in the printed list from number herein reported is due to the omission of 12,112 at Salisb and of those buried in lots in city and village cemeteries not know national.

On the 6th September, 1873, eighty bids, received in response to advertisements, were opened in this office. The prices varied gre as did the material offered; but fourteen bids, understood to agree stantially with the specifications, appeared to come within the sum of $1,000,000, to which the cost is limited by law.

All are still before the Secretary of War for award under the No decision has as yet been communicated to this office.

CLAIMS FOR QUARTERMASTER'S STORES, UNDER THE ACT OF JULY, 1864.

On 1st July, 1872, there were on file in this office 10,351 claims u this act, amounting to $6,857,006.56. One thousand nine hundred sixty-three were filed during the year, amounting to $2,024,72 Total on file, 12,314, for $8,881,731.72.

Six hundred and forty-two have been reported to the Third Au for settlement during the year. Amount claimed, $615,212.42. amount allowed on these is $296,775.90; less than 50 per cent. T hundred and twenty-five have been rejected; amount, $443,68 Total disposed of, 967 claims, amounting to $1,058,902.17, upon w $296,775.90 only has been proved to be just and allowable under law. At the same rate the 11,347 claims yet on file will be prob settled for about one-third of their face, and of the $7,822,829.55 w they claim, it is probable that about $2,600,000 will be proved t justly due.

For detailed information in regard to several other classes of cl which come under the cognizance of the Quartermaster General, r ence is made to the report of the assistant, Major Ludington, in ch of that part of this office.

Various tables and abstracts also accompany this report, which information in the business of this office important to preserve future reference.

CLOTHING AND EQUIPAGE.

The President of the United States having adopted a new uni for the Army, its manufacture was begun by this office. But the propriation made before the change of uniform, and based upon mates looking to the use of material in store, was not sufficient to vide uniforms of the new pattern for 30,000 men. The manufacture distribution were therefore arrested until, on the 1st of July, 1873, the propriation of the present fiscal year became available. Nearly all troops have now received the new uniform. The old-pattern clot stored in the Philadelphia depot has, in compliance with the law, sold at public auction, the sales amounting to $490,094.31. The sur f such clothing distributed at military posts throughout the country is eing reported for sale as fast as the new uniform takes its place.

The sale of a large quantity of clothing stored at the Western or Jef-ersonville depot, on the Ohio, is deferred until next season.

A great improvement in the shoes and boots of the Army has been ıade by the introduction of those whose sole is attached to the upper-eather by screws of brass wire. Reports are almost unanimous to the ffect that these boots and shoes last longer, and are a better protection) the feet, than the sewed or pegged boots heretofore used.

Nearly all military posts have been supplied with single bedsteads; ıe head and foot trestles are of iron, supporting slats of wood, easily emovable. They are much liked, are easily kept free from vermin, an be stacked in piles during the day so as to give room for circulation n the floors of the barrack-room, while at night they enable the men to leep singly and thus put an end to much discomfort, unavoidable with ıe two and three story wooden bunks so long used in barracks.

OTH AND MILDEW PROOFING—PROCESS OF GEORGE A. COWLES & CO.

The sum of $350,000, appropriated for the purpose by Congress, has een expended in treating the woolen and cotton material in store, ac-ording to the above process, in order to render it proof against moth nd mildew. To complete its application to all material which will need during the next fiscal year will require the sum of $100,000, for which n estimate has been submitted.

The appropriation for clothing and equipage for the past fiscal year as $900,000. The expenditures by this office were $858,412.07.

Forty-one thousand nine hundred and fifty-three dollars and thirty-hree cents were transferred, by order of the Secretary of War, to the rdnance Department, to which the manufacture and supply of knap-acks and haversacks has been transferred.

Four hundred and fifty-six thousand nine hundred and eighty-six dol-rs and eighty-two cents were received during the year from sales of lothing, including $18,832.56 derived from sales of clothing and mate-ial to officers for their personal use.

The National Asylum for Disabled Volunteers was entitled under the w to a large quantity of the old-pattern clothing. The president of he asylum obtained the authority of the Secretary of War to draw the quivalent of this clothing in shoes. One hundred and fifty-one thou-and two hundred and forty-nine pairs of pegged shoes were delivered) the asylum from the stock in depot.

The clothing returns of officers of the Army are promptly examined nd settled as received.

Full statements of the operations of the clothing and equipage branch f this office will be found at the close of this report, attached to the re-ort of Major Bingham, quartermaster, on duty in this office during the ear.

EXPLORING EXPEDITIONS.

The party under command of Lieutenant Wheeler, of the Corps of ngineers, engaged in the exploration of the territory west of the one undredth meridian, has been supplied with animals, wagons, and for-ge, for transportation of escort, of supplies, and of its collections. uch quartermasters' stores as are needed by the civilians employed pon this expedition are sold to them at cost price.

The geologic and geographic exploration of Professor F. V. Hay United States geologist, has also been aided, under special authori the Secretary of War, by sale of partially unserviceable animals equipments.

The expedition for marking the boundary between the United S and Canada, west of the Lake of the Woods, under the charge of missioner Archibald Campbell, has also received aid and assistance the Quartermaster's Department as heretofore.

During the month of November, 1872, under the order of the S tary of War, I passed over the transportation routes from the Ea the western end of Lake Superior and to the Red River of the Nort Fargo, the crossing of the Northern Pacific Railroad, and at Bre ridge, the terminus of the Saint Paul and Pacific Railroad. I had intended to visit the depot of military transportation service on the souri River, then at Sioux City, as well as the crossing of the Mis by the North Pacific, at Fort Abraham Lincoln; but I found the r southwest of Saint Paul and west of the Red River blocked with and the routes impassable. I proceeded by the Kansas Pacific Rail to Denver and to Cheyenne, and thence returned to this city. Th tension of these roads greatly aids this department in its operati but as the troops are moved further to the west and occupy posts w the mountain ranges, the total cost of transportation is not red The field of operations is changed, but remains as extensive an costly as before.

The officers who have been on duty in this office during the f year are: Col. Robert Allen, who was on duty here during the who the preceding fiscal year, and was ordered, on the 11th March, 187 the headquarters Military Division of the Pacific, at San Franc where, since March 22, 1873, he has been on duty as chief quarter ter of that division.

Maj. J. D. Bingham has taken charge of those branches of the (finance and inspection) vacated by this assignment of Colonel A in addition to his former duties, except those of the cemeterial bra to which, since June 25, 1873, Capt. A. J. McGonnigle has bee signed.

Maj. M. I. Ludington has continued on duty in this office.

All these officers have shown their usual zeal and intelligence in performance of their respective duties, and their assistance has very valuable.

The other principal stations of the Quartermaster's Department, ing the fiscal year, have been filled as follows, viz:

Col. Robert Allen, assistant quartmaster general, chief quarter ter Military Division of the Pacific, at San Francisco, from Marc 1873.

Col. D. H. Rucker, assistant quartermaster general, chief qua master Military Division of the Missouri, Chicago, Ill.

Col. Rufus Ingalls, assistant quartermaster general, chief qua master Department of the East, in charge of the general depot of Quartermaster's Department at New York City, and, from 25th No ber, 1872, also chief quartermaster Military Division of the Atlant

Col. L. C. Easton, assistant quartermaster general, chief qua master Military Division of the Atlantic to 25th November, 1872, a charge of the Philadelphia depot of the Quartermaster's Departme the principal depot of clothing and equipage of the Army—throug the year.

Col. Stewart Van Vliet, assistant quartermaster general, from ber 18, 1872, chief quartermaster Military Department of the Missouri, at Fort Leavenworth.

Lieut. Col. S. B. Holabird, chief quartermaster Department of Texas.

Lieut. Col. James A. Ekin, chief quartermaster Department of the South; also, from September 26, 1872, in charge of the Jeffersonville depot of the Quartermaster's Department, and, from December 11, 1872, chief quartermaster Military Division of the South.

Lieut. Col. A. R. Eddy, on duty at the Philadelphia depot to August 17, 1872; from August 27 and 28, 1872, depot quartermaster at San Francisco, chief quartermaster Department of California, and chief quartermaster Military Division of the Pacific, of which last duty relieved by Col. Robert Allen on March 22, 1873.

Lieut. Col. Rufus Saxton, to May 28–31, 1873, chief quartermaster Department of the Columbia, at Portland, Oreg.; from June 23, 1873, chief quartermaster Department of the Lakes, at Detroit, Mich.

Maj. A. J. Perry, chief quartermaster Department of the Platte, Omaha, Nebr.

Maj. J. G. Chandler, in charge of depot at Fort Leavenworth, and, from July 1 to October 18, 1872, acting chief quartermaster Department of the Missouri.

Maj. C. G. Sawtelle, to July 15, 1872, chief quartermaster Department of California, and depot quartermaster at San Francisco; from August 15, 1872, to close of the fiscal year, assistant to the depot quartermaster at Philadelphia, and chief quartermaster third quartermaster's district Department of the East.

Maj. J. J. Dana, chief quartermaster Department of Arizona, at Prescott.

Maj. James M. Moore, from September 1, 1872, depot quartermaster at Cheyenne.

Maj. William Myers, in charge of depot, at Washington, D. C.

Maj. B. C. Card, to April 18, 1873, depot quartermaster at San Antonio; from May 1, 1873, chief quartermaster Department of Dakota, at Saint Paul.

Capt. E. B. Grimes, depot quartermaster at Saint Louis.

Capt. A. F. Rockwell, in charge of depot at Yuma, on the Colorado, Ariz., relieved Capt. J. G. C. Lee, who had completed a full tour of duty in Arizona.

Capt. C. H. Hoyt, in charge of general depot at Jeffersonville, Ind., to September 26, 1872, and of construction of buildings to November 21, 1872. From December 23, 1872, disbursing officer District of the Lakes, at Camp Warner, Oregon; from February 26, 1873, to close of the fiscal year, chief quartermaster of the Modoc expedition.

Capt. John F. Rodgers, military store-keeper at Jeffersonville, Ind., to April 8, 1873; from December 21, 1872, he was also on duty at the Philadelphia clothing depot, so remaining to the close of the year.

These officers have administered the offices of the Government committed to their charge with ability and zeal.

One assistant quartermaster, Capt. Henry Inman, was cashiered on July 24, 1872; one military store-keeper, Capt. N. D. A. Sawyer, was cashiered on November 30, 1872; and another, Capt. G. H. A. Dimpfel, was wholly retired on August 16, 1872.

Lieut. Col. C. H. Tompkins was suspended by sentence of a court-martial for one year from the 4th January, 1873.

The work of the Department, extending over the whole territory of the United States, has been satisfactorily conducted by the officers of its establishment, aided by about three hundred subalterns deta from the line as acting assistant quartermasters.

The personal annual reports received from these officers are among the records of the Department. They contain much valu information in relation to the wants and supplies of the service, bear testimony to the intelligence and fidelity of their writers. To acting assistant quartermasters, upon whom the burden of the gre part of the detailed work of issue to troops and of care of public plies falls in consequence of the insufficient number of officers of regular establishment, this office is much indebted. I have spo elsewhere on the legislation which I believe to be necessary to do t justice, and to give them assistance much needed in the performan their laborious and responsible duties.

The principal active operations which have taxed the resources the officers of this Department during the year, have been the op tions against the Apaches in Arizona, who have been reduced to a s of comparative quiet; the campaign against the Modocs in Califo and Oregon, finally successful, and the organization and conduct of trains of the expedition to the Yellowstone, which made a succes march of seven hundred miles into an uncultivated and in great barren wilderness, and returned without serious loss of material, ing accomplished its purpose.

In connection with this expedition, the Yellowstone River was for first time navigated by steamboats, which met the troops at their c ing near Powder River and rendered essential service.

In these important active operations, Lieutenant-Colonel Eddy, c quartermaster Department of California, and Captain Hoyt, the la present with the troops in the Modoc campaign, Maj. J. J. Dana, c quartermaster Department of Arizona, Maj. B. C. Card, chief qua master Department of Dakota, and Capt. G. B. Dandy, who person organized the Yellowstone train, rendered valuable service.

I have the honor to remain, very respectfully, your obedient serv

M. C. MEIGS,
Quartermaster General, Bvt. Maj. Gen., U. S.

Hon. W. W. BELKNAP,
Secretary of War.

List of papers accompanying the annual report of the Quartermaster General for the year ending June 30, 1873.

I.—*Report of Maj. J. D. Bingham, Quartermaster, U. S. A.*

QUARTERMASTER GENERAL'S OFFICE,
Washington, D. C., September 26, 1873.

GENERAL: I have the honor to submit a report of the operations of he inspection branch of this office during the fiscal year ended June 30, 1873.

The duties of this branch continue as specified in previous annual eports, and are principally as follows:

Keeping narrative reports of stations and duties of all officers who perform duty in the Quartermaster's Department.

Examining, and preparing for such action as may be requisite, proceedings of boards of survey, inventory and inspection reports, communications on assignments of officers and distribution of employés, and annual reports of officers.

Filing and distribution of orders, circulars, rolls of honor, and other printed documents.

Preparing monthly returns of officers of the Quartermaster's Department for the Adjutant-General's Office.

Keeping books of "letters received" and "letters sent" relating individually to officers, agents, and employés of the Department.

The following is an approximate statement of the number of or
circulars, and books received and distributed during the fiscal year

	Received.	Distri
General Orders, Quartermaster-General's Office	......	
General Orders, Adjutant-General's Office	116,900	7
General Court-martial Orders, Adjutant-General's Office	36,000	2
General Orders, Headquarters of the Army	4,200	
Circulars	10,200	
Roll of honor	2,000	
Hints on horse-shoeing	......	
Regulations of the Quartermaster's Department	500	
Miscellaneous	2,400	

During the same period about 1,200 inventory and inspection re
and 132 proceedings of boards of survey have been examined and,
necessary, acted upon; 4,506 entries have been made in the bo
"letters received," and 767 letters written and indorsements m
which are recorded in the corresponding book of "letters sent," be
a much larger number recorded in books kept in other branches of
office.

I respectfully inclose herewith lists of officers on duty in the Qua
master's Department during the fiscal year.

Very respectfully, your obedient servant,

J. D. BINGHAM,
Quartermaster, Bvt. Brig. Gen., U. S.

The QUARTERMASTER GENERAL, U. S. A.

No.	Name and grade.	Rank.	Duties, &c.
	QUARTERMASTER-GENERAL.		
1	Montgomery C. Meigs	Brigadier-general and brevet major-general	In charge of the Quartermaster's Department at Washington, D. C.; from November 4 to December 4, 1872, absent on tour of inspection West and Northwest.

Total	7,057 00	57,437 95	64,769 70	129,264 65

Appropriations for the fiscal year ending June 30, 1873.

Appropriations for fiscal year		$12,114,219 00
Appropriations for deficiencies, act of March 3, 1873		1,570,000 00
So much of the $200,000 appropriated by the act of March 3, 1873, for preservation of clothing and equipage from moth and mildew during the year ending June 30, 1874, as was used during the year ending June 30, 1873, the appropriating act rendering it available in that year		150,000 00
Amount placed to the credit of appropriations during the year by deposits of funds for redistribution, and of amounts derived principally from sales to officers of public property purchased during the year ending June 30, 1873		16,114 56
Amount expended for other departments and refunded by them during the fiscal year		25
Total		13,850,333 81
Remitted to officers for disbursement on requests of the Quartermaster-General	$13,365,188 96	
Requisitions on settlements made at the Treasury of claims and accounts	22,032 52	
Transferred to the Ordnance Department for the manufacture of knapsacks, haversacks, canteens, and great-coat straps	41,953 33	
		13,429,174 81
Balance in Treasury June 30, 1873		421,159 00

The accounts and vouchers which have been examined in this Office since the last annual report show disbursements as follows:

On account of appropriations for years prior to the fiscal year ending June 30, 1872	$1,843,605 13
For the fiscal year ending June 30, 1872	8,041,800 03
For the fiscal year ending June 30, 1873	5,638,632 94
Total	15,524,038 10

Appropriations are charged with these disbursements as follows:

1.—*Appropriations for the Quartermaster's Department.*

	Prior to July 1, 1871.	Fiscal year 1871-'72.	Fiscal year 1872-'73	Total.
Regular supplies	$376,804 66	$2,940,066 23	$2,182,432 29	$5,499,303 18
Incidental expenses	163,975 38	903,317 10	705,951 31	1,773,243 79
Purchase of cavalry and artillery horses	375 00	181,829 23	47,391 00	229,595 23
Barracks and quarters	295,676 75	1,081,257 06	793,619 19	2,170,553 00
Army transportation	959,684 96	2,213,396 60	1,347,823 06	4,520,904 62
Mileage—transportation of officers' baggage	486 39			486 39
Purchase—manufacture and preservation of clothing, camp and garrison equipage	10,499 36	491,445 92	413,158 29	915,103 57
Purchase of stoves	18,145 31	16,593 65	10,527 55	45,266 51
National cemeteries	8,900 32	156,456 29	62,921 62	228,278 23
Hospitals			8,224 93	8,224 93
Headstones			1,814 00	1,814 00
Total	1,836,548 13	7,984,362 08	5,573,863 24	15,394,773 45

2.—*Special appropriations and expenditures for other Departments.*

	Prior to July 1, 1871.	Fiscal year 1871-'72.	Fiscal year 1872-'73.	Total.
Fire-proof buildings		$51,584 19	$64,269 70	$115,853 89
Army contingencies	$142 50	719 82	500 00	1,362 32
Pay Department	1,555 26	978 07		2,533 33
Subsistence Department	2 25	2 25		4 50
Medical Department	782 43	1,900 72		2,683 15
Ordnance Department		56 00		56 00
Indian Department	4,574 56	2,112 65		6,687 21
Soldiers' Home		84 32		84 32
Total	7,057 00	57,437 95	64,769 70	129,264 65

can be made on the duplicate in case of loss of the original, and a d payment for the same service might pass the examination of this b without detection.

It is suggested that officers who issue bills of lading be requir number them, and to enter on their "report of persons and ar hired" the number of each bill issued; name of carrier; destina name of consignee; character and weight of articles, or any si data by which the bills, when received here, can be identified.

Under section 2 of the act of February 12, 1868, a disbursing o cannot use money appropriated for one purpose for any other. under section 5 of the act of July 12, 1870, the appropriation specifically for the service of any fiscal year can only be applied t payment of expenses properly incurred during that year. These laws, together with the custom that has grown up in this office creasing the number of heads of appropriation, are now the cau much embarrassment to the administration of the affairs of the Qu master's Department.

The following table shows the balances of appropriations und by the Quartermaster's Department, July 1, 1873. They are emb under fifteen different heads, and the accounts with them are ke five sets of books. Each year adds another set of books in another account is opened generally with the same heads of appr tion as in the previous year. In time the system will confus embarrass the records and business of this office:

Balances of appropriations undrawn by the Quartermaster's Department, July 1, 1

•	Prior to July 1, 1870.	1870–'71.	1871–'72.	1872–'73.	187

There are now nine appropriations which are disbursed by the termaster's Department, viz: regular supplies; incidental expe cavalry and artillery horses; barracks and quarters; transportati the Army; clothing and equipage; erection and repair of hosp national cemeteries, and headstones for soldiers' graves.

Some quartermasters draw money from all of these appropria nearly all draw from four of them, to wit: for regular supplies, dental expenses, barracks and quarters, and transportation of the

Each officer doing duty in the Quartermaster's Department is req to make, monthly, an estimate of the funds required during the en month, setting forth the exact number of men and animals for which to provide, the articles he requires, with the cost of each, and the pe and articles he must employ, with the rate of pay, and the total amo money he requiries from each appropriation. When the money is rec

must expend it for the purposes for which he asked it, and for no
her. He cannot, even temporarily, use money appropriated for trans-
rtation for paying for fuel. This often causes great embarrassment,
the exigencies of the service are constantly changing. An officer
io makes an estimate of funds required for an ensuing month finds,
ien the money is received, that his wants are entirely different from
iat he expected they would be when he made the estimate. He asked,
rhaps, for money to erect temporary shelter for troops, and has re-
ived it; but instead of going into quarters the troops are on the march,
d instead of a sheltering fund he wants transportation money, of
iich he has none on hand. As he cannot use the sheltering funds on
nd, great embarrassment ensues.

The quartermaster of a post garrisoned by infantry, where there are
om four to six public animals, asks and receives funds to supply their
ants. Suddenly and unexpectedly the garrison is increased by the ar-
val of cavalry. Forage, horse-shoes, horse medicines, &c., are wanted
once. The quartermaster has no funds to buy them with, and does
t know whether any such funds are in the Treasury; therefore he can-
t buy for cash and dare not buy on credit, as the law forbids any ex-
nditure beyond the appropriation.

As the fiscal year draws to a close, and some of the appropriations
e entirely drawn out of the Treasury, some of the officers of the
iartermaster's Department will have expended all of the funds in
eir hands belonging to such appropriations, while others will have a
rplus; this necessitates transfers from one officer to another, often far
art and with infrequent means of communication. As the year draws
ill nearer to a close, the number of such transfers increases, until all
e accounts are paid or the appropriations are exhausted.

Great delays in the payment of accounts frequently occur under the
esent system, which tend to increase the expenses of the department
d oppress the creditors of the Government.

The same not only applies to a portion of the Army, but to it as a
iole, as is shown by the condition of the appropriations for the last
o fiscal years, during which the present system of accounts has been
operation. During the fiscal year 1871–'72, the expenses for barracks
d quarters and incidental expenses were greater than anticipated,
d notwithstanding the most earnest efforts to prevent it, those appro-
iations were exceeded. Last year the expenses on account of cloth-
g, stoves, barracks and quarters, and incidental expenses were con-
lerably greater than was anticipated when the estimate was made,
d as a consequence the Department had no funds for supplying suita-
e clothing to the Army toward the close of the year, or for the pur-
ase of stoves.

The present system of making estimates upon which the appropria-
ons are based is one of long standing in the Quartermaster's Depart-
ent; it is one that it is not thought best to change, as it is doubtless
ell for a department to send to Congress as detailed an estimate as
ssible.

In 1836 there were four appropriations for the Quartermaster's Depart-
ent, viz, for clothing, various expenses, allowance to officers for trans-
rtation of their baggage, and for the transportation of troops. In
37 the number of appropriations was increased by Congress to six,
z, clothing, regular supplies, barracks and quarters, transportation of
ops, and incidental expenses. In 1848 the number of appropriations
is increased by Congress to seven, a separate item being made for

cavalry and artillery horses, which had previously been included i appropriation for incidental expenses.

But never, until July, 1870, were officers required to keep sep accounts with each appropriation. Officers in the field estimat such amount of funds as they supposed they would want; the m was drawn from the Treasury and sent to them in a lump; and used it without regard to—in fact did not know—the appropriation which it was drawn. As long as the money held out they paid all p expenses. When their accounts were rendered to the Quarterm General and the accounting-officers of the Treasury Department were analyzed, and the amounts chargeable against the several a priations noted on the vouchers, and entered on the books at the T ury. It is true that under such a system of disbursement some a priations might be overdrawn; but as the President then had po transfer from one appropriation to another in the same departmen deficiency in one was made good by the surplus of another, so th law was violated, the wants of the service were well supplied, an total expenditure did not exceed the amount appropriated.

The power of the President to transfer from one appropriation other, conferred by the act of March 3, 1809, was taken away by th of February 12, 1868, and the Quartermaster's Department cannot r to the old system of disbursing without some authority of law.

Some relief from the present condition of affairs is demanded b necessities of the service. The Department is now bound to dis its money in strict conformity to the appropriations based on esti made ten months before the year during which the money is to be exp begins. If the Army were a stationary force its expenses cou calculated beforehand in detail with a reasonable degree of certa but such is not the case.

The necessity of keeping, whenever possible, in the hands of eac bursing-officer, or subject to his draft, a considerable balance of appropriation which he is likely to use, instead of a general ba applicable to all, increases the amount of money lying idle in the d tories, and subject to draft by disbursing-officers, and thus increase remittances to them and lowers the balances in the Treasury ava for remittances to the posts where actually needed.

The embarrassments indicated may be removed in two ways. by a slight change in making out the annual estimate of appropri required for the Quartermaster's Department. Instead of appropr for each head, as at present, arrange them as follows:

For general and incidental expenses of the Quartermaster's Department, to wit :	Dates of acts, resolutions, &c., authorizing or providing for the expenditure.	Reference to Statutes at Large, (Little, Brown & Co.'s edition.) Vol.	p.	sec.	Estimated amount which will be required for each detailed object of expenditure.	Total amount to be appropriated under each head of appropriation.	Amount appropriated for the current fiscal year ending June 30, 1874.
For purchase of stoves for heating and cooking, of fuel for officers, enlisted men, guards, hospitals, store-houses, and offices; of forage in kind for the horses, mules, and oxen of the Quartermaster's Department at the several posts and stations, and with the armies in the field; for the horses of the several regiments of cavalry, the batteries of artillery, and such companies of infantry and scouts as may be mounted; and for the authorized number of officers' horses, including bedding for the animals; of straw for soldiers' bedding; and of stationery, including blank books for the Quartermaster's Department, certificates for discharged soldiers, blank forms for the Pay and Quartermaster's Departments, and for printing of division and department orders and reports.	Mar. 28, 1812 May 22, 1812 July 17, 1862 Jan. 31, 1868 Revised Army Regulations, 1863, p. 159.	2 2 12 15	696 743 594 246	3 3 2 8	$5,000,000 00	....	....
For postage and telegrams or dispatches; extra pay to soldiers employed, under the direction of the Quartermaster's Department, in the erection of barracks, quarters, store-houses, and hospitals, in the construction of roads, and other constant labor, for periods of not less than ten days, under the act of March 2, 1819, and August 4, 1854, including those employed as clerks at division and department headquarters; expenses of expresses to and from the frontier posts and armies in the field, of escorts to paymasters and other disbursing officers, and to trains where military escorts cannot be furnished; expenses of the interment of officers killed in action, or who die when on duty in the field, or at posts on the frontiers, or at posts and other places, when ordered by the Secretary of War, and of non-commissioned officers and soldiers; authorized office furniture; hire of laborers in the Quartermaster's Department, including the hire of interpreters, spies, and guides for the Army; compensation of clerks to officers of the Quartermaster's Department; compensation of forage and wagon masters, authorized by the act of July 5, 1838; for the apprehension of deserters and the expense incident to their pursuit; and for the following expenditures required for the several regiments of cavalry, the batteries of light artillery, and such companies of infantry and scouts as may be mounted, namely: the purchase of traveling forges, blacksmiths' and shoeing tools, horse and mule shoes and nails, iron and steel for shoeing, hire of veterinary surgeons, medicines for horses and mules, picket-ropes, and for shoeing the horses of the corps named; also, generally, the proper and authorized expenses for the movement and operations of an army not expressly assigned to any other department.	Mar. 2, 1819 Aug. 4, 1854 Mar. 16, 1802 July 13, 1866 Revised Army Regulations, p. 159, par. 1065. Total..............................		....	....	....	....	15,525,000 00	14,248,508 81

This will reduce the number of heads of appropriation to three, while
ie estimate, in all its details, is made precisely as heretofore.

Another method is by the passage of a law relieving disbursing officers
f the Quartermaster's Department from the necessity of keeping sep-
rate and distinct accounts with each branch of the appropriation for
ie annual service of the Quartermaster's Department.

The change in the estimate may be made, I think, without recourse to
iw, as the system grew up in this Office without the requirement of
w.

Very respectfully, your obedient servant,

J. D. BINGHAM,
Bvt. Brig. Gen. and Q. M., U. S. A.

The QUARTERMASTER-GENERAL OF THE ARMY.

IV.—*Report of Maj. J. D. Bingham, quartermaster, U. S. A.*

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., October 2, 1873.

GENERAL: I have the honor to submit the annual report of the cloth-
ig branch of this Office for the fiscal year ending June 30, 1873.

The work connected with this branch of the Office has been as follows:
upplying clothing and camp and garrison equipage to the Army of the
nited States; the manufacture and purchase of such articles as were
ot on hand and required; the preservation of the large supplies of
oolen garments, and materials for the manufacture of clothing, in
ore at the principal clothing depots; the sale of such articles of cloth-
ig and equipage as had become unserviceable and damaged being
art of the large stock left on hand at the close of the late war; the
xamination and settlement of officers' clothing accounts, and examina-
on of claims for clothing furnished to the United States forces during
ie war of the rebellion, not heretofore acted upon or presented to this
ffice.

The President of the United States having approved the recommen-
ations of a board of officers convened by order of the Secretary of War
adopt a new uniform for the Army of the United States, this Office,
i obedience to instructions from the War Department, made prepara-
ons to manufacture and purchase a complete outfit of the new uniform
r the 30,000 enlisted men comprising the Army, with a view of having
ready for distribution on the 1st of December last. The appropria-
on not being sufficient for the purpose, the issue was postponed until
ie appropriation of this fiscal year should become available. In the
ean time preparations were made for commencing the distribution of
ie clothing in July last, and nearly all the troops have now been sup-
ied with the new uniform.

The regulations for the new uniform require that all troops shall wear
ie mounted overcoat. The stock of great-coats mounted being limited,
ie obtaining of a supply for foot-troops became necessary.

To prevent a loss to the Government, and with a view to utilizing the
rge supply of great-coats (foot) on hand, the Quartermaster-General
commended the issue of these overcoats after attaching to them
ounted capes. The Secretary of War having approved the recom-
endation, these great-coats have since been issued with double capes,

and the result thus far shows that this arrangement has been of ben to the Government, as well as to the enlisted men of the Army.

The iron bunks adopted for use of the Army have been supplied nearly all the military posts. They appear to give general satisfact Thirty-four officers have reported upon them favorably, and nine u vorably, the latter principally from a misunderstanding of the purp of the bunk. Complaint having been made that the pine slats split easily, instructions have been given to manufacture them of hard wo such as oak or ash.

The brass-screwed boots and bootees heretofore issued in limi quantities are now being purchased and distributed to the whole Ar Sixty-two officers of the Army have, in their annual reports for the fi year, reported on them favorably; one thinks sewed shoes are better the sand; and another that the soles should be of hemlock-tanned s leather.

The stock of blankets, stockings, and boots and shoes left on han the close of the war has become exhausted, or unserviceable from l storage. In procuring new supplies of blankets and stockings by c tract, much difficulty has been experienced in obtaining articles of g quality, and equal to the standard.

The stock of dark-blue cloth and light-blue kersey will be so ne exhausted this year that it will be necessary to purchase a supply n year.

In view of the difficulty of procuring articles of standard qualit recommend that a few officers of the Quartermaster's Department be signed to duty at the Philadelphia clothing depot, where most of large contracts for clothing are made, in order that they may qua themselves for the duty of inspecting the manufacture of such fab and articles as are contracted for at that depot. They should be nished with necessary facilities; and when large contracts, such as blankets, stockings, cloth, tents, &c., are given out, they should be signed to the duty of watching the process of manufacture, in orde secure compliance with contracts, and insure the furnishing of arti equal to the standard.

After the officers first detailed for this duty become proficient, t should be replaced by others. By continuing this system the Dep ment will always be supplied with officers capable of superintending manufacture of the most important articles of the uniform.

I desire to call the attention of the Quartermaster-General to following extracts from the annual report of Capt. John F. Rodg military store-keeper, United States Army, at the Philadelphia de of the Quartermaster's Department, for the fiscal year ending June 1873:

> The new uniform is in process of manufacture, and will shortly be issued. I in quality, appearance, and workmanship, vastly superior to the old. None but cloth has been used, and the prices paid for making it have been sufficient to in good work. The patterns are all better than those formerly used, and if the A complains, the Quartermaster's Department need feel no remorse: The boots bootees are unexceptionable; the iron bunks excellent. The foot dress-caps are mirable. I think, however, that the helmet needs some alterations to make it wh desired. The shell, *i. e.*, the felt, is almost too light; the disk on the crown shoul broader to bear the heavy strain of the spear, plume, and socket, and the bin should be heavier and broader. It is the most sightly head-gear I have ever seen, needs, in my opinion, the above.
>
> The uniform dress-coats are well made, of good shape, and will, I think, give s faction. One objection has already arisen, and will doubtless continue to be m The "facings" are of bright cloth, beautiful at first, but likely to lose its fresh upon exposure. As some reports upon this subject are probable, I deem it prope say that I have for several months been trying experiments with these cloths.

I have found *none*, either foreign or domestic, that are not fugitive in color. They ll fade. The facing-cloth used for the present uniform is the best I have tried. It vas purchased before I came to Philadelphia, and my experiments are disinterestedly mpartial.

A new overcoat, or rather an adaptation of the old, has just been introduced in the rmy from a design of the Quartermaster-General. It is an admirable garment, and hould, and doubtless will, give great satisfaction to the Army.

Efforts have been made, and are still making, to raise the standard of all clothing nd equipage to what it should be, and I think with success. I believe the issue will ow compare favorably with those of former years, even to that "good old time" beore the war.

The stock of woolen materials at this depot, and at Jeffersonville also, has been reated by the "Cowles & Co. process." The result is yet to be seen. I trust that it vill prove of great service.

The $\frac{6}{4}$ dark-blue cloth will, in all probability, be exhausted within the coming year. most respectfully recommend that sufficient time be taken to secure a good quality. t is the most expensive and requires more care in purchasing and inspecting than any ther.

The $\frac{6}{4}$ sky-blue kersey will also be exhausted within a year in all probability. I do ot think it will be necessary to purchase any of this width until the $\frac{3}{4}$ sky-blue kersey is exhausted Of the latter a sufficient quantity remains to make all the trousers nd capes to overcoats that will be required during the present year. Of $\frac{6}{4}$ and $\frac{3}{4}$ darklue flannel enough remains to last at least two years.

All of the above has been carefully overhauled; the unserviceable laid aside for conlemnation, and the balance carefully baled.

I again most respectfully call your attention to the careless estimates made by reuiring officers. Requisitions for clothing are made apparently at hap-hazard, and ften the sizes of boots, hats, caps, &c., are glaringly improper and incorrect.

One officer wanted, in an estimate for 499 pairs of bootees, $\frac{37}{10}$, $\frac{41}{11}$, $\frac{29}{12}$, $\frac{8}{13}$, $\frac{7}{14}$, and this for vhite troops. In 600 forage-caps he asks for $\frac{196}{1}$, $\frac{145}{2}$, and so through his estimate. This s but one of many, and causes the issuing officer great trouble and perplexity. A refrence to the schedule of sizes will show how they should be issued. It also gives the urchasing officer great trouble, for it is impossible to obtain correct sizes to fit such stimates.

I respectfully recommend that a moderate proportion of coats, blouses, and overcoats e sent unmade. I believe it would save money to the Treasury and to the soldier, nd prove satisfactory to all parties concerned.

Officers often expect to find clothing made similar to "custom-work," and not finding it, at once commence a crusade against the Quartermaster's Department, and paricularly against the clothing branch.

The packing of clothing has been greatly improved within the last year. Dressoats, boots, bootees, helmets, dress-caps, and forage-caps are boxed. Trousers, louses, stable-frocks, shirts, bed-sacks, &c., are baled. The baling is much improved. better quality of canvas is used, and it has two coats of paint given it before the ale is made. Such bales will bear rough carriage well, and, if exposed to rain or oisture, will keep their contents dry.

The expenditures on account of the moth and mildew proof process of eo. A. Cowles & Co. during the fiscal year have been $350,000. This ncludes $200,000 appropriated for the current fiscal year, but made vailable for expenditure during last fiscal year. To prepare such artiles of woolen and cotton fabrics on hand as have not yet been submited to the process, an additional sum of $100,000 has been asked in the stimate for the coming fiscal year.

The appropriation for clothing and equipage for the past fiscal year vas $900,000; $369.93 were deposited by officers to the credit of the appropriation, making a total of $900,369.93.

The expenditures on account of clothing and equipage during the ame period were $858,412.07. The sum of $41,953.33 was transferred n the books of the Treasury to the appropriation for ordnance and ordance stores, being the amount appropriated for the purchase of knapacks and haversacks, which are now furnished to the Army by the)rdnance Department.

During the past fiscal year $456,986.82 were realized from sales of lothing and equipage, including $18,832.56 from sales of clothing, &c., o officers of the Army for their personal use.

To supply the Army with the necessary clothing and equipage dur the coming fiscal year, it is estimated that an appropriation of $2,000, will be required. The large quantities of clothing rendered surplus the adoption of the new uniform will be sold under the law of Marcl 1873, at public auction. The clothing on hand at the Philadelphia pot will be disposed of at auction on the 2d of October, (to-day,) and the obsolete clothing in possession of officers at the various posts, g risons, depots, &c., in the United States, will be disposed of in like m ner as required by law.

The gross proceeds of these sales will be covered into the Treasury the United States.

The large quantity of unserviceable clothing in store at the depot Jeffersonville, Ind., will, under the orders of the Secretary of War, kept in store till next year, in order to avoid throwing on the market this time more property than can be disposed of with advantage to Government.

It is expected that more money will be realized from these sales th will be required to supply the Army with the necessary clothing dur the coming year.

Measures have been taken to embrace in the next annual repor complete statement of the number of articles sold under the law refer to, as well as the amounts obtained and turned into the Treasury.

Congress having by the passage of the act of January 21, 1873, gran to each of the inmates of the National Home for Disabled Volunte one complete suit of clothing, the Secretary of War, at the request the Hon. B. F. Butler, president of the board of managers, authori the issue to the Home, in lieu of clothing, of an equivalent from the stock of pegged bootees on hand. These bootees had, by long stora become unfit for issue to troops in active service. The issue to Home amounted to 151,249 pairs.

Twelve claims for clothing and equipage, amounting to $19,678 were received during the past fiscal year.

Six claims were referred to the Third Auditor of the Treasury w recommendation for settlement, amounting to $5,792.10.

Three claims, amounting to $8,209.86, were sent to the Third Audi of the Treasury with recommendation that they be disallowed.

The examination of the clothing accounts of officers is being made fast as they are received. During the fiscal year ending June 30, 18 3,647 returns were examined and transmitted to the Treasury Depa ment for settlement, leaving but 376 awaiting examination in this Off

Twelve clerks, two copyists, and two laborers have been employ during the fiscal year, in this branch of the Office.

The following-described statements accompany this report:

1. Statement showing, as far as can be ascertained from the reco of this Office, the quantity of clothing, camp and garrison equipage, a clothing materials in the hands of officers of the Army, June 30, 18 the quantity of clothing, camp and garrison equipage, purchased, m ufactured, sold, lost, and issued to the Army of the United States dur the fiscal year ending June 30, 1873, and the quantity remaining hand for the supply of the Army at that date.

2. Statement of amounts received from the sale of surplus serviceal unserviceable, damaged, and irregular articles of clothing, &c., sold the principal clothing depots; also of the amounts derived from sale officers during the fiscal year ending June 30, 1873.

3. Statement showing expenditures on account of clothing, camp a garrison equipage, during the fiscal year ending June 30, 1873.

4. Statement of the amounts received and expended by the Quartermaster's Department on account of clothing and equipage during the fiscal year ending June 30, 1873.

5. Statement showing number of claims received and acted upon during the fiscal year ending June 30, 1873, on account of clothing, camp and garrison equipage.

6. Statement of returns of clothing, camp and garrison equipage received, examined, and transmitted to the Treasury Department, and of letters received and written, during the fiscal year ending June 30, 1873.

Very respectfully, your obedient servant,

J. D. BINGHAM,
Quartermaster, U. S. A., Bvt. Brig. Gen.

Brig. Gen. M. C. MEIGS,
Quartermaster-General, U. S. A.

A.—*Statement showing, as far as can be ascertained from the records of this Office, the quantity of clothing, camp and garrison equipage, and clothing material, in the hands of officers of the Army June* 30, 1872, *the quantity of clothing and equipage purchased, manufactured, sold, lost, and issued to the Army of the United States during the fiscal year ending June* 30, 1873, *and the quantity remaining on hand, for the supply of the Army, at that date.*

QUARTERMASTER-GENERAL'S OFFICE, *October* 2, 1873.

F.—*Statement showing number of claims received and acted upon during the fiscal year ending June* 30, 1873, *on account of clothing and equipage.*

Twelve claims received, amounting to	$19,678 42
Six claims referred to Third Auditor of the Treasury, with recommendation for settlement, amounting to	5,792 10
Three claims referred to Third Auditor of the Treasury, with recommendation that they be disallowed, amounting to	8,209 86

Respectfully submitted.

J. D. BINGHAM,
Quartermaster, U. S. A., Bvt. Brig. Gen.

QUARTERMASTER-GENERAL'S OFFICE, *October* 2, 1873.

V.—*Report of Maj. M. I. Ludington, quartermaster, U. S. A.*

QUARTERMASTER-GENERAL'S OFFICE,
September 25, 1873.

GENERAL: I have the honor to submit the following report of the operations of the several branches of your Office under my charge during the fiscal year ending June 30, 1873:

INDEBTED RAILROAD COMPANIES.

At the close of the fiscal year ending June 30, 1872, there were due the United States from railroad companies which purchased railway material and rolling-stock under the provisions of Executive orders of August 8 and October 14, 1865, and for repairs to railroads, $4,734,442.43. During the fiscal year ending June 30, 1873, interest has accrued upon this indebtedness and expenses have been incurred to the amount of $101,573.95. Payments have been made and credited to the companies to the amount of $151,303.44.

On July 1, 1873, there remained an indebtedness of $4,658,924.07 to be collected, not including the sum of $25,788.87 due from the New Orleans and Ohio Railroad Company, which cannot be collected by reas of the company being bankrupt.

By referring to the report for the fiscal year ending June 30, 1872, will be seen that during that fiscal year the debt increased $10,091. During the last fiscal year it has decreased in the manner indicat $75,518.36.

Accompanying this report there is a statement marked A, showi the original indebtedness of each company; the total increase on count of interest and expenses; the increase or decrease of the de during the year; the payments made during the year; the total pa ments, and the balance unpaid July 1, 1873.

Four companies, the Alabama and Florida, the Indianola, now t Gulf, Western Texas and Pacific, the Mississippi and Tennessee, a the Pacific Railroad of Missouri—main stem—have discharged their debtedness during the year.

Seven companies, the Alexandria, London and Hampshire, the A bama and Chattanooga, the East Tennessee and Georgia, the East Te nessee and Virginia, the Nashville and Chattanooga, the Nashville a Decatur, and the Southwest Branch Pacific Railroad of Missouri, duced their indebtedness $94,339.02. These companies also paid on count of interest $1,756.62, making their total payments during t year $96,095.64.

The indebtedness of nine companies, the Edgefield and Kentuck the Knoxville and Kentucky, the McMinnville and Manchester, t Mississippi, Gainesville and Tuscaloosa, the Mobile and Ohio, the Me phis, Clarksville and Louisville, the Memphis and Little Rock, the Nas ville and Northwestern, and the Selma, Rome and Dalton, has increas $83,528.29. The companies have, however, paid to the United Sta during the year $15,976.40.

In addition to the amount stated to have been received and applied the liquidation of this indebtedness, accounts for the transportation the troops and property of the United States remain unadjusted, as f lows, to wit:

Alabama and Chattanooga Railroad Company, in Treasury Department	$149
East Tennessee and Virginia Railroad Company, in Treasury Department	19,529
East Tennessee and Georgia Railroad Company, in Treasury Department	8,084
Edgefield and Kentucky Railroad Company, in Treasury Department	4
Mobile and Ohio Railroad Company, in Treasury Department	75,775
Mobile and Ohio Railroad Company, in Quartermaster-General's office—suspended	414
Memphis, Clarksville and Louisville Railroad Company, in Treasury Department	3,593
Memphis, Clarksville and Louisville Railroad Company, in Quartermaster-General's office	5,699
Nashville and Northwestern Railroad Company, in Treasury Department	1,474
Nashville and Chattanooga Railroad Company, in Treasury Department	20,812
Southwest Branch Pacific Railroad of Missouri, in Treasury Department	841
Selma, Rome and Dalton Railroad Company, in Treasury Department	5,874
Total	142,253

When these accounts shall have been finally examined and adjust they will be placed to the credit of the respective railroad compani thereby reducing the total indebtedness, as shown above, to $4,51 670.28.

There is also due for postal service rendered by these companies abo $101,000, which, when paid over by the Post-Office Department, as co templated by the seller and purchaser of the property, will still furth reduce the debt.

In this connection your attention is invited to the necessity for Congressional legislation, or other authoritative action, to provide for the payment to this Department, at the end of each and every quarter, of all money due any indebted railroad company for postal service, until its ndebtedness has been discharged, and notice to that effect given by the Quartermaster-General.

The necessity for such action is found in the following: Under the provisions of Executive Orders of August 8 and October 14, 1865, large quantities of railway material and rolling-stock, amounting in value to $4,665,061.16, were sold on credit to the railroad companies now indebted, on the express condition, among others, that all postal earnings of the several companies should be applied to the liquidation of the debts. Subsequent negotiations and agreements have recognized and affirmed this condition. The companies carry the mails, and the Postmaster-General, in settlement for the service, directs that the amount found due for it be placed to the credit of the Quartermaster's Department.

Before the Auditor of the Treasury for the Post-Office Department, whose duty it is to make payment for postal service, will place the money to the credit of the Quartermaster's Department, or, in other words, pay t over to this Department, he requires each railroad company, by an agent appointed by its board of directors, to give an order in favor of this Department for the amount due. Until such an order has been given the money remains as a part of the appropriations for the Post-Office Department, and is not transferred to the appropriations for the Quartermaster's Department; neither can it be placed to the credit of the railroad companies on the books of this office.

The Auditor holds that he has no authority to pay to the Quartermaster's Department money due for service rendered by these railroad companies without an order from them requesting that it be done, notwithstanding the fact that it was one of the conditions on which the property was sold that the money, when earned, should be placed to their credit, and notwithstanding the further fact that this office has urged that a contract, executed by this Department by order of the President of the United States, should be respected by the other Departments of the Government. In order, therefore, that the Auditor may pay the money to this Department, or rather more properly, issue his warrant therefor, so that a transfer of the money to the appropriations for this Department can be made, and the proper credit be given, some action by Congress, or other competent authority, seems to be absolutely necessary.

I have further to report that I am informed that under the act of July 12, 1870, sections 5 and 6, the money due for a portion of this service has been turned into the Treasury, so that, without a specific appropriation, the amount due for services prior to the time the moneys were so turned into the Treasury cannot be transferred to this Department and applied to the liquidation of the debt. There is, in fact, no money to be so applied.

Since the date of my last annual report, the suit against the Nashville and Decatur Railroad Company has been compromised and settled, under the act of March 3, 1871, (16 Stat., chap. 109,) for the sum of $70,000—$6,000 cash, balance payable in ten years from July 1, 1872, with interest at the rate of 5 per cent. per annum, payable semi-annually, on the first days of January and July of each year.

The indebtedness of the company to this amount is evidenced by its bond with interest coupons attached, and payment secured by a lien upon all the property and franchises of the company, by guarante the Louisville and Nashville Railroad Company, and by decree of United States circuit court, affirming the liability of the company, t enforced by execution in case of default in making payment accor to the terms agreed upon.

I cannot report any progress in the suits against the Nashville Northwestern, the McMinnville and Manchester, and the Knoxville Kentucky railroad companies during the year, though I have urged they be brought to a hearing as soon as possible.

The suit against the McMinnville and Manchester Railroad Comp has been postponed, at the request of counsel for the company, pen decision of the suit of that company against the Nashville and Cha nooga Railroad Company. The question of a longer postponemen now under consideration.

By reference to the table herewith it will be seen that the indeb ness of the Alabama and Chattanooga Railroad Company has bee duced to $3,980.02. Since the first of July I have received $2,775.5 account of postal services rendered by the company, and the am that will be due for services rendered during the third quarter of will more than liquidate its debt.

The Memphis and Little Rock Railroad Company has made no ments on its indebtedness during the year. It has carried the mails the amount due for that service is retained by the Auditor of the T ury for the Post-Office Department, that officer declining to pay money over to this Department, as required by the contract bet the company and this Department, without an order from the com requiring it to be done, and the company refuses to give the order.

Learning some few months since that the road had been sold by cree of court under its second mortgage, I made inquiry of the U States district attorney for information upon that point and the ad bility of bringing suit against the company to recover the amount the United States. The district attorney in reply stated that the was sold to Mr. Witt on the 17th day of March last; that he had informed that measures were being taken to have the road sold u the first mortgage; that such a sale might embarrass the Governme making a collection, should it be compelled to collect it by distrai suit; and that further delay of the payment of this debt is hazardo the Government.

With these facts before the office, and the knowledge that the rail company not only was not making any payments, but would not when it could, a statement of the case was submitted to the Secre of War, with the recommendation that suit be instituted to recove amount due. The recommendation was approved, and the papers been sent to Messrs. Perry and Mathews, with instructions to bring at once.

In my annual report for the fiscal year ending June 30, 1871, I st that "Arrangements had been made with the Selma, Rome and Da Railroad Company, under which payment of its debt is to be ma monthly installments of $1,000 each, in money, commencing on th of October, 1871, and continuing for one year; thence for one $2,000 per month, and thereafter $3,000 per month until the debt is charged. In addition to the foregoing payments, all postal earn and earnings from military transportation are to be applied to the ment of the debt."

It is now my duty to report that the company has failed to kee written promise and agreement so far as the payment of the mo nstallments is concerned, or to show any intention to comply therewith. This is the more remarkable because the president of the company, in his letter asking that the company be permitted to pay its debt upon hese terms, said he did it with the approval of the directors of the oad, and that it was not his intention to submit a proposition which he could not fulfill—"knowing the honesty of my purpose, I trust the foregoing proposition will be accepted."

The company has carried the mails and furnished whatever transportation has been required. The amounts due for the transportation service have been, or will be so soon as the accounts can be settled, placed o the credit of the company; but the amount due for carrying the mails the past year has not been paid, because the Auditor refuses to pay without an order from the company, and the company refuses to give the order.

Further action, either by legislation or suit, is necessary to compel payment of this debt.

During the fiscal year I received from indebted railroad companies in money and postal dues $75,972.90, all of which has been deposited in the Treasury of the United States, and also credited upon their indebtedness.

TRANSPORTATION.

It is shown by reports of officers, so far as received, that the Quartermaster's Department transported by rail, water, wagon, and stage during the fiscal year 72,860 persons, 8,148 animals, and 164,125,223 pounds of material.

The remodeled system of transportation referred to in my last annual report, having been approved by the Hon. Second Comptroller, has been adopted and is believed to work satisfactorily and advantageously. It was published in General Orders No. 98, Adjutant-General's Office, series 1872. A copy of this order was transmitted to each railroad and other transportation company in the United States known to this office.

RAILROAD TRANSPORTATION.

The reports of officers show that 32,935 persons, 6,122 animals, and 76,649,739 pounds of material were carried by railroad.

Amount paid for railroad transportation as reported by disbursing officers of this Department	$555,198 28
Amount of accounts for similar service rendered during the fiscal year referred by this office to the Treasury Department for settlement	366,316 59
Total settlements for railroad-transportation service during the year	921,514 87

The records of this office show the transportation service performed by the Pacific Railroads for this Department during the fiscal year to have been as follows, viz:

Name of company.	Number of persons transported.	Number of animals transported.	Pounds of freight transported.
Union Pacific Railroad	6,166	1,763	21,697,106
Central Pacific of California	3,034	63	2,444,211
Kansas Pacific Railroad	1,951	390	5,711,947
Sioux City and Pacific Railroad	223	36	3,544,054
Total	11,374	2,252	33,397,318

The cost of service performed by the Pacific railroads during
fiscal year, so far as accounts have been received at this office, may
stated as follows:

Name of company.	Amount of accounts referred to the Treasury for settlement.	Amount of accounts rendered and under examination July 1, 1873.	Tota
Union Pacific Railroad	$211, 339 87	$48, 536 48	$259, 8
Central Pacific of California	70, 186 23	32, 262 84	102, 4
Kansas Pacific Railroad	56, 173 61		56, 1
Sioux City and Pacific Railroad	1, 383 26	351 66	1, 7
Total	339, 082 97	81, 150 98	420, 2

At the date of this report all of the accounts for each month's serv
performed by these railroads, during the fiscal year, have not b
received at this office, but taking the monthly average value of
accounts, already presented for settlement, as a basis, their total ea
ings during the year would be as follows:

Union Pacific Railroad Company	$445,50
Central Pacific Railroad Company	136,59
Kansas Pacific Railroad Company	149,79
Sioux City and Pacific Railroad Company	2,40
	734,29

By act of Congress approved July 2, 1864, (section 5,) one-half of
compensation for services rendered for the Government by those Pa
railroads that had received Government bonds in aid of their const
tion was required to be applied to the payment of the bonds so iss
by the Government. The other half of their earnings was paid to
companies in cash, until the passage of the act of Congress of Ma
3, 1873, (section 2,) which directs the Secretary of the Treasury to w
hold all payments to said railroad companies to the amount of payme
made by the United States for interest upon bonds of the United Sta
issued to said companies.

In view of the provisions of this law of March 3, 1873, the Quar
master-General requested information from the Second Comptrolle
to whether the earnings of these roads were still to be made a cha
against the appropriation for the Quartermaster's Department, "
propriation for transportation of the Army."

The Acting Second Comptroller decided August 4, 1873, "That
moiety withheld from Pacific Railroads, under section 2 of act of Ma
3, 1873, although it be not paid to the railroads except in the even
a favorable judgment of the court, must be charged against approp
tion of the Quartermaster's Department for transportation of
Army."

Therefore, although payment is withheld from the companies, the
amount earned by these roads is now, as before passage of act of Ma
3, 1873, to be taken from appropriation of the Quartermaster's Dep
ment for Army transportation.

WAGON AND STAGE TRANSPORTATION.

The transportation by wagon was as follows: 756 passeng
32,004,635 pounds of freight.

The reports show the transportation by stage to have been 1,380 pas-
ngers and 3,648 pounds of freight.

mount paid for wagon transportation as reported by disbursing officers of this Department	$977,753 94
mount of accounts for service rendered during the fiscal year, referred by this office to the Treasury Department for settlement	189 50
Total for wagon-transportation service rendered during the year	977,943 44
mount paid during the year for stage transportation as reported by disbursing officers of this Department	59,262 29
mount of accounts for survices rendered during the fiscal year, referred by this office to the Treasury Department for settlement	57 00
Total for stage-transportation service rendered during the year	59 319 29

Thirty-two contracts for wagon transportation were made during the
ear. The contract for wagon transportation from most convenient
oints on the Atchison, Topeka and Santa Fé, Kansas Pacific and
enver and Rio Grande railroads, to posts in the Department of Mis-
ouri, as also in the State of Texas, north of Red River and west of the
th meridian, and Camp Apache, Ariz., from May 10, 1873, to March
1, 1874, was made at the rate of 90¾ cents per 100 pounds per one hun-
red miles. The average of the rate for this service during the previous
ntract year from points on the same roads was $1.17½ per 100 pounds
er one hundred miles.

The existing contract rates for wagon-service in Texas show also a
aterial reduction in the price per 100 pounds per one hundred miles,
compared with the contract rates for previous years.

The decrease of rates in the Department of Texas, as also in the De-
artment of Missouri, is doubtless due in a great measure to the short-
ning of the distance of wagon travel consequent upon the rapid com-
letion of the lines of railroad west and southwest toward the posts to
e supplied, wherefore freighters, no longer subject to the delays and
angers of travel over the previous longer routes, can afford to trans-
ort stores at more reasonable rates per 100 pounds per one hundred
iles.

A slight increase of rates generally over those of the previous year
as paid under the contracts for hauling on the Pacific coast made
uring the year ending June 30, 1873.

WATER TRANSPORTATION.

There were carried by water for the Department during the fiscal year
,789 persons, 2,026 animals, and 55,467,201 pounds of material.

he amount paid on account of this service by disbursing officers during the year, so far as was reported, was	$751,018 22
ccounts and claims for similar service rendered during the fiscal year, audited in this office and referred to the Treasury for settlement, amounted to	9,955 36
Total	760,973 58

The following vessels owned by the Government have been in service
uring the entire fiscal year, viz:

Steam-tug General A. A. Humphreys, employed at Boston.
Propeller General McPherson, employed at San Francisco.
Schooner Margaret, employed at Portland, Oreg.
Steam-launch Pulaski, employed at Fort Pulaski, Ga.

Schooner Matchless, employed at Fort Jefferson, Fla.

The cost during the year of running and maintaining these ve owned by the Government was $37,413.19.

Twelve vessels of different kinds have, at various times as the cessities of the service required, been employed by charter or other during the year at an expense of $43,056.76, which, together with of running and maintaining vessels owned by the United States, i cluded in the amount hereinbefore reported as having been pai account of water transportation by disbursing officers of this De ment.

Transportation appropriation and its disbursement.

Original amount appropriated for fiscal year 1872–'73	$4,000, 0
Deficiency appropriation	500, 0
Total	4,500, 0

Recapitulation of expenditures made from appropriation for Army t portation up to July 1, 1873, *for transportation service rendered d the fiscal year* 1872–'73.

Kind of transportation.	Passengers	Freight.	Expenditures.	To
For railroad transportation	$595, 344 33	$324, 972 92	$1, 197 62	$921,
For water transportation, including expenses of running and maintaining Government vessels	192, 193 64	515, 305 35	53, 474 59	760,
For wagon transportation	577 46	924, 732 50	52, 633 48	977,
For stage transportation	54, 206 47	1, 526 47	3, 586 35	59,
Total	842, 321 90	1, 766, 537 24	110, 892 04	2, 719,

For purchase of transportation animals; for purchase and repairing of Army and spring wagons, carts, harness, &c.; for hire of teamsters; for pumps and other apparatus to supply posts with water, estimated	1, 350,
Amount paid for building and repairing wharves, for digging wells, and for tolls	18,
Grand total	4, 087,

Since the close of the fiscal year officers have made payments, an port an outstanding indebtedness to be met, the totals of which absorb about all the balance of the appropriation, and to settle u the decision of the Second Comptroller of August 4, 1873, befor ferred to, the accounts of the Pacific Railroad for service during year, now under examination at this office and to come in, a defici appropriation will probably be necessary.

Transportation accounts of previous fiscal years.

During the fiscal year accounts and claims for transportation se performed during the previous fiscal years were referred by this to the Treasury Department for settlement as follows:

For railroad transportation	$450, 7
For water transportation	130, 1
For wagon transportation	62, 7
For stage transportation	1, 1
For miscellaneous transportation-claims, telegrams, &c	7, 5
Total	652, 4

REGULAR AND MISCELLANEOUS SUPPLIES.

CONTRACTS.

There were filed and examined in this office during the fiscal year 14 contracts, as follows: 230 for forage, embracing 5,664,734 pounds ' oats or barley, 457,940 bushels of oats, 345,937 bushels of corn, 30,744 ns of hay, 439,000 pounds of bran; 6 for forage as required, 23 for oth forage and fuel; 11 for straw, 2,508 tons; 30 for coal, 22,011 tons; 4 for wood, 84,022 cords; 2 for wood as required; 37 for charcoal, ,075 bushels; 4 for the construction of quarters, 47 for transportaon, 5 for miscellaneous services; 7 for horses and mules, 701 cavalry orses, 35 artillery horses, and 100 mules; 12 for clothing, camp and arrison equipage; 16 for national cemeteries, 3 for stationery, 36 leases, charter party.

FORAGE, STRAW, AND FUEL.

The issues of forage and straw during the fiscal year were as follows: orn, 588,488 bushels; oats, 939,690 bushels; barley, 172,870 bushels; ay, 48,558 tons; fodder, 116 tons; straw, 3,292 tons; bran, 55,084 ıshels.

The issues of fuel during the same period were: wood, 130,786 cords; nthracite coal, 16,937 tons; bituminous coal, 15,300 tons.

ANIMALS.

The following statements show the number of horses and mules purnased in the several military departments during the fiscal year endg June 30, 1873, with their total and average cost:

Cavalry and artillery horses.

Where purchased.	Number.	Total cost.	Average.
partment of the East	43	$10,777 50	$250 63
partment of the South	94	13,630 00	145 00
partment of Texas	370	49,010 00	132 46
partment of the Missouri	501	63,306 30	126 36
partment of the Platte	636	82,692 00	130 02
partment of Dakota	11	1,529 00	139 00
partment of California	254	27,966 00	110 11
partment of the Columbia	15	1,725 00	115 00
pot of Washington	14	3,165 00	225 07
Total	1,938	253,800 80	....

The amount appropriated for the purchase of cavalry and artillery orses for the fiscal year was $300,000. The money not expended has een directed to be turned into the Treasury.

Mules.

Where purchased.	Number.	Total cost.	Average.
partment of the East	1	$225 00	$225 00
partment of the South	27	4,774 94	176 85

SUMMARY.

The following is a summary statement of the number of animals
chased, sold, died, &c., and remaining on hand during the fiscal en
June 30, 1873:

On hand, purchased, &c.	Horses.	Mules.
On hand July 1, 1872	9,729	8,758
Purchased	1,938	2,397
Taken up, &c	96	59
To be accounted for	11,763	11,214
Sold	1,051	200
Died	424	489
Lost and stolen	158	100
Total sold, died, &c	1,633	789
On hand June 30, 1873	10,130	10,425

ESTIMATES AND REQUISITIONS.

Annual estimates for regular and miscellaneous supplies requ
during the fiscal year at the various posts within the Military Divi
of the Missouri were received, and instructions given as to meth
providing the stores deemed necessary by the Quartermaster-Gener

During the fiscal year requisitions for miscellaneous supplies
received as follows, and instructions given in relation thereto:

Military Division of the Pacific
Military Division of the Missouri
Military Division of the South
Military Division of the Atlantic
Depot of Washington
Military Academy at West Point
Miscellaneous sources

FIRE-EXTINGUISHERS.

At the beginning of the fiscal year the fire-extinguisher known a
Babcock was generally in use at the various military posts, and u

Iarch 1, 1873, this pattern was supplied when called for and deemed ecessary. Subsequent to that date the Champion fire-extinguisher, ıanufactured at Louisville, Ky., has been supplied at no greater cost. 'he use of the Babcock, however, has not been discontinued.

The Louisville company also manufacture an extinguisher having two ylinders, of a capacity of 150 gallons each, mounted on wheels, to be rawn by men or horses. Upon approval by the Secretary of War, one f these machines, supplied with 200 feet of hose and a force-pump, was rdered March 27, 1873, for Omaha Barracks, and one has since been rdered for Fort Brown, Texas.

Within the fiscal year fire-extinguishers have been supplied to the ɔllowing posts:

nta Fé, N. Mex., (Babcock)	8
helbyville, Ky., (Babcock)	2
adison Barracks, N. Y., (Babcock)	3

WARREN COOKERS.

Reference was made in the report of last year to experiments with ıe patent cooker invented by Capt. F. P. Warren, of the English avy, the results of which had not then been fully communicated to ıis office. Since that time reports have been received from numerous fficers, some of whom speak highly of the merits of the cooker, while thers do not consider its use desirable for the Army. In view of the ifference of opinion expressed by officers the Quartermaster-General as not deemed it advisable to supply them for general use of the Army.

ARMY WAGONS.

The following is a statement of wagons, ambulances, and harness on and in the Quartermaster's Department, United States Army, as ıown by the last returns of officers received at this office:

	Serviceable.	Not serviceable.
rmy wagons	3,107	88
ring wagons	125	4
mbulances	240	7
'agon harness	23,411	633
mbulance harness	2,148	29

For several years past the Army wagons, subjected to the hard usage f the service in the West, have been made to answer requirements nly by frequent and extensive repairs. These wagons, as also the ock in store at depots, were bought during the war, and are therefore om eight to ten years old.

A careful inspection of those in store revealed the fact that the timers of most of them were so unsound, from various causes incident to ıeir age, as to be unfit for hard service upon the road.

From reports of inspection made by various officers it was found ecessary that nearly all of the wagons in use in the Military Division f the Missouri should be replaced by new ones. For this purpose the chief quartermaster of the division reported 480 new wagons nee Accordingly 100 new wagons were bought in open market in Phila phia, and 85 shipped during the spring months to the Departmen Dakota, and 14 to the Department of the Platte, leaving to be shi 381 wagons. In addition to these, and to meet the wants of the lowstone expedition, 150 new wagons were purchased at same plac open market and shipped to Fort Abercrombie, Dak. The cos these 250 wagons, purchased in open market to meet an emerge was $175 each.

By authority of the honorable Secretary of War, and after due ad tisement, a contract was made July 12, 1873, by the depot quarter ter, Philadelphia, with the lowest bidder, for 300 Army wagons $149.50 each.

With approval of the Secretary of War, the purchase of 10 sp wagons for use at various posts and stations was authorized.

YELLOWSTONE EXPEDITION.

This expedition was organized to survey the line of the North Pacific Railroad through the country from the Missouri River to Yellowstone, and westward in Montana. It entered the field in J 1872, and was supplied by the Quartermaster's Department, under rection of the local military authorities, with needed means of trans tation from stock on hand, with the exception of a number of h teams.

At the close of the season's work of 1872 the commanding office the expedition reported that the transportation equipment furnishe service with the expedition was found unfit for active operations in rugged country over which it was required to pass.

In order to facilitate the operations of the expedition during present season, the Quartermaster-General, upon approval of the Se tary of War, directed the supply of new material, or such as wa every respect as good as new.

In addition to the number found suitable and supplied from the partment of Dakota, 150 entirely new wagons were furnished Philadelphia. To complete the trains of the expedition there purchased 1,058 mules, including 36 ambulance, 12 artillery, an saddle mules. Such new harness and other articles as were neces to thoroughly equip the trains were also purchased.

EXPLORING EXPEDITIONS.

By direction of the Secretary of War the surveying expedition of the one hundredth meridian, under command of Lieut. Georg Wheeler, of the Engineer Corps, has, during the past fiscal year, supplied with forage, animals, wagons, &c., for transportation of es and its supplies, and various miscellaneous stores.

Sale was authorized to civilian employés, at cost price to Governm of such quartermaster's stores as they required.

Sales of partially unserviceable animals and quartermaster's st were also, by approval of the Secretary of War, made to Prof. F Hayden, United States geologist, for the continuation of his geolog and geographical explorations in Colorado Territory.

Every facility consistent with laws and orders has, by authorit the War Department, been afforded by this Department to the exp tion under direction of Mr. Archibald Campbell, American commissi for the survey of the northwestern boundary.

IRON-HUB WHEELS.

The attention of this Office having been directed to the early decay the Army wagons in the dry climates of Arizona and New Mexico, incipally owing to the shrinkage of timbers, the Quartermaster-Genal, after correspondence with the officers of the Military Division of e Pacific, ordered the parts of 100 wagons to be gotten out in the ugh at Philadelphia, and shipped to Arizona; these to be accomnied by iron hubs for the wheels.

In the early part of this year instructions were issued for shipment to exas, New Mexico, Dakota, and Arizona of sample sets of certain tents of metal-hub wheels adopted in general mercantile use.

It was directed that the comparative merits of these wheels be tested the use of one front and one hind patent hub wheel upon one side of e same wagon, with one front and one hind wheel of the regulation ttern on the other side; the results to be carefully noted and reported this Office. No reports have yet been received.

ORSESHOES AND SHOEING MATERIAL, SMITHS' AND SADDLERS' TOOLS.

By General Orders No. 2, War Department, Adjutant-General's Office, nuary 2, 1873, the saddlers' tools and materials, the smiths' tools and aterials, the tool-bags, and the mountain-howitzer forges, with their ols and materials, prescribed by General Orders No. 60, War Departent, Adjutant-General's Office, June 29, 1872, for use of the cavalry rvice, were directed to be supplied by the Ordnance Department. ursuant to this order the transfer of large quantities of these stores s been made to the Ordnance Department.

THE EPIZOOTIC.

During the fall of 1872, and extending into the spring of 1873, a orse epidemic, commonly called the epizootic catarrh, swept over the untry, causing great destruction of animals.

The officers of this department adopted such remedies as their judgent and experience suggested, with, in general, the most successful sults.

The chief quartermaster Department of the East published, in a cirlar dated October 28, 1872, a method for the treatment of the disease, ith certain prescriptions for the cure of severe cases. Reports show at in many cases throughout the various military departments the sease yielded to this treatment.

In the month of January, 1873, the Secretary of War communicated e following simple preventive and remedy for the disease, which was ade known at once to all officers of this department, with directions r its communication to all officers serving under their direction, havg charge of public animals: "One teaspoonful chlorate of potash, vice a day to four horses; put in a pail of water, and let each horse ink its proportion." The losses of public animals by this disease, so r as reported to this Office, were very light. Much inconvenience was, owever, occasioned to the transportation and cavalry service during e prevalence of the disease.

CAVALRY REMOUNTS.

In addition to the horses purchased as needed from time to time, a ecial remount of the several regiments of cavalry was authorized to e made early this spring. For this purpose purchase was authorized

of 1,200 horses, to be apportioned among the regiments as follo
First Cavalry, none; Second Cavalry, 175; Third Cavalry, no
Fourth Cavalry, 175; Fifth Cavalry, 150; Sixth Cavalry, 100; Seve
Cavalry, 150; Eighth Cavalry, 150; Ninth Cavalry, 150; Tenth C
alry, 150.

The animals for the Second, Sixth, Seventh, and Tenth Regime
were ordered purchased in Missouri, Iowa, and adjoining States; th
for the Fifth Regiment in California; those for the Fourth Regiment
Texas; those for the Eighth Regiment in Leavenworth and vicinity a
Colorado Territory; and those for the Ninth Regiment at points to
designated by the commanding general, Department of Texas.

The purchases were ordered made by boards of officers, constitut
by the department commanders. Each board was to have upon i
quartermaster and one or two officers of the regiment for which
horses were required; the boards to move from place to place, a
after proper advertisement by posters, making known the days
which they would be at certain places, to purchase, not from "midd
men," but from "farmers and stock-raisers," the best horses presen
in lots from one upward.

APPROPRIATION FOR REGULAR SUPPLIES.

The regular appropriation under this heading was	$4,000,00
The deficiency appropriation	310,00
Total	4,310,00

Information as to remittances made, and their classification, will
found in the annual report of the finance branch of this Office.

At the close of the fiscal year there remained in the Treasury
$1,685.55 to the credit of the appropriation. This balance, as also
funds then in hands of officers, will not be sufficient to meet the indebt
ness of the year, and a deficiency appropriation will be necessary.

BARRACKS AND QUARTERS.

MILITARY BUILDINGS.

During the year the construction of one hundred and twenty
buildings has been authorized. They include barracks, officers' quart
stables, store-houses, guard-houses, &c. They are at military posts
the States of California, Louisiana, Florida, Michigan, South Caroli
Tennessee, Texas, Kansas, New York, Maryland, North Carolina, Oreg
Nevada, Kentucky, Georgia, Nebraska, Pennsylvania, Minnesota, Ma
Iowa, Connecticut, Virginia, and in Territories of Dakota, New Mexi
Montana, Washington, Arizona, Utah, Colorado, Indian Territory, a
District of Columbia. Their estimated cost was $245,544.87.

WHARVES.

Authority has been given for the construction and repair of whar
to the amount of $18,111.32.

REPAIRS.

Upon special estimates submitted to the Secretary of War, author
has been given to make repairs, alterations, &c., of public buildin
and for construction and repairs of cisterns, &c., at the various milit
posts to the amount of $228,796.49.

NEW POSTS.

Two new posts have been authorized during the year in Arizona—one or near Tucson, and one near the mouth of the San Carlos River. ese posts are for four companies each.

The estimated cost of these posts, as originally reported, was $53,000 r the former, and $54,609 for the latter; "$35,000 is the extreme sum ich the Secretary of War authorizes to be expended for both. Labor troops to be employed when possible." The former post is reported being on the Rillito, about seven miles from Tucson, and is known as Camp Lowell."

The hutting of one company of infantry at Otter Crossing, Northern cific Railroad, having been determined by the department commander necessary and urgent, he directed the expenditure of $2,675 for the ork; the season being advanced, would not admit of first submitting e subject to the War Department.

The division commander on investigation, considering the work "very cessary," directed that it be continued. Action and expenditure apoved by the Secretary of War in October last, and funds remitted.

Sheltering for officers and men at James River Crossing, Northern Paic Railroad, subsequently known as Fort Cross, and more recently as rt Seward, was authorized in letter of division to department comander July 8, 1872. Remittance of $30,000 for this work was authord by the Secretary of War. The construction of a provisionary hostal has since been authorized.

The division commander also, in a letter of July 10, 1872, to the dertment commander, authorized expenditure of $20,000 for shelter of n and officers at Tulerosa, N. Mex.; and the Secretary of War s since authorized remittance of the funds.

Reference was made in last annual report to the construction of posts the Northern Pacific Railroad crossing of the Missouri River and at eaver City, Utah. During the past fiscal year these posts have been rtially constructed. That at Northern Pacific Railroad crossing of the issouri is known as Fort Abraham Lincoln.

ecapitulation of the expenditures specially authorized for construction of new buildings at established posts; construction and repair of cisterns, miscellaneous repairs to buildings, construction of new posts and hutting troops, and how distributed.

partment of California	$48,640 96
partment of Texas	44,143 19
partment of the East	75,207 27
partment of the South	15,810 79
partment of the Platte	51,012 51
partment of the Gulf	42,360 66
partment of the Columbia	9,490 00
partment of Arizona	62,707 30
partment of the Missouri	151,795 04
partment of Dakota	78,120 96
partment of the Lakes	839 00
Total	580,127 68

Of this sum, constructions, repairs, &c., to the amount of $122,060, ough approved by the War Department during the fiscal year, were t to be commenced, nor any expenditures incurred therefor, until ter July 1, 1873, when the new appropriation became available.

The Secretary of War, on January 14, 1873, in a communication to the House of Representatives, recommended an appropriation of $100 by Congress for rebuilding the post of Fort Griffin, Texas, in a ma suitable for the accommodation of six companies. No appropria was made by Congress.

HOSPITAL BUILDINGS.

During the fiscal year, construction, repairs to, and alteration military hospital buildings throughout the country have been aut ized by the Secretary of War at a cost of $77,754.70; work to amount of $10,916.75, though approved during the year, and inclu in the $77,754.70, was not to be commenced, nor any expenditure in red, until the beginning of the new year.

The following list gives the locality of the hospitals and amoun expenditure authorized at each:

Fort Abercrombie, Dak., $82.24; Angel Island, Cal., $190; Fort rancas, Fla., $1,163; Fort Brady, Mich., $350; Baton Rouge, $4,689.50; Beale's Springs, Ariz., $4,500; Camp Bidwell, Cal., $ Camp Baker, Cal., $306.30; Fort Boise, Idaho, $843.83; Fort Con Tex., $1,800; Cheyenne Agency, Dak., $500; Fort Duncan, Tex., $2, Fort Ellis, Mont., $300; Fort Foote, Md., $215.17; Fort Gratiot, M $701.85; Fort Gibson, Ind. T., $136.80; Fort Hamilton, New York bor, $580; Fort Hays, Kans., $2,000; Jackson, Miss., $550; Jack Barracks, La., $1,157.50; Key West, Fla., $4,490.10; Lower B Agency, Dak., $420; Little Rock, Ark., $1,192.40; Fort Larned, Ka $189.14; Fort Leavenworth, Kans., $580; Fort Laramie, Wyo., $8, Fort Lyon, Colo., $150; Fort McHenry, Md., $250; Fort Mackinac, M $30; Camp Mojave, Ariz., $4,000; McPherson Barracks, Ga., $ Fort Monroe, Va., $250; Fort McIntosh, Tex., $198.50; Fort Niag N. Y., $150; Newport Barracks, Ky., $7,000; Omaha Barracks, $205.37; Fort Porter, N. Y., $481; Presidio, Cal., $1,226.75; Fort Russell, Wyo., $600; Fort Ripley, Minn., $1,000; Fort Riley, K $134; Camp Supply, Ind. T., $4,824; Fort Snelling, Minn., $550 Fort Sullivan, Me., $246; Savannah, Ga., $1,870; Fort Sully, $748; Fort Seward, Dak., $4,000; Fort Selden, N. Mex., $200; Shaw, Mont., $350; Fort Sanders, Wyo., $350; Thomas's Barra Ala., $500; Fort Union, N. Mex., $1,370.09; Fort Wadsworth, York Harbor, $146; Fort Wingate, N. Mex., $3,818.16; Fort Wa Mich., $1,793.50; Fort Wood, New York Harbor, $75; Yerba B Island, Cal., $1,200; Yuma Fort, Cal., $2,000.

The appropriation for construction and repair of hospitals was $100.

At the close of the fiscal year there remained in the Treasury to credit of appropriation for hospitals for 1872–'73, $15,473.49.

DEPOT BUILDINGS AT SAN ANTONIO, TEX.

In the act making appropriations for sundry civil expenses of Government for the fiscal year ending June 30, 1874, and for other poses, approved March 3, 1873, provision is made for the construc at this station of depot buildings, including shops, offices, and com sary and quartermaster's store-room, and appropriates $100,000 t for. The Secretary of War, on March 24, 1873, directed the Qua master-General to "allow no action to be taken by any officer of Quartermaster's Department looking to the erection of these d buildings until further instructions." A copy of this order was municated to the Department Quartermaster.

BUILDINGS, ETC., SOLD.

The sale of ninety buildings of various dimensions, together with ices, remnants of old iron bridges, &c., located at different places roughout the country, has been authorized.

BUILDINGS TRANSFERRED.

Seven buildings at Clark's Point, Mass., and thirteen at Fort Washgton, Md., heretofore in charge of the Quartermaster's Department, ve, by direction of the Secretary of War, been transferred to the stody of the Engineer Department.

The property known as the "State arsenal," at Savannah, Ga., held the United States Government since the occupation of that city by e army of General Sherman, has, by direction of the War Departent, been restored to that State.

LAND TO BE SURRENDERED, SOLD, ETC.

On October 31, 1863, February 12, 1864, and February 28, 1865, cern lands were conveyed by deed to the United States, in Wilmington, s Angelos County, Cal., in consideration of $1.

A large number of buildings were erected thereon by the United ates during the war, known as Drum Barracks and Wilmington pot.

The United States not actually requiring the further use of the emises, Congress, under act approved February 25, 1873, directed the cretary of War to reconvey said grounds to the original parties, er the removal or sale of the buildings, "as shall be most for the inests of the United States." Orders for the sale of the buildings ve been issued.

In 1871, certain persons conveyed to the United States by a deed, ronounced valid by the Department of Justice,) certain lands in naha, Neb., in consideration of the payment of $10.

It was at that time contemplated to construct permanent quarters d offices for department headquarters. Legislation since has prented the construction of the buildings, and it has also been decided at the site is not a convenient one.

The parties who deeded the land have made application to have it stored to them, and reconveyance has been recommended by the eutenant-General of the Army and this office. The subject is awaitg the final decision of the Secretary of War.

On July 25, 1828, and January 13, 1829, the United States purchased Joseph and Elmira Houlton certain lands at Houlton, county of ashington, State of Maine, for $639.21. The United States having further use of the eighteen buildings which had been subsequently ected thereon, the Secretary of War directed that they be sold at blic auction. The sale was made July 12, 1871, and $345.25 realized erefrom.

By act of Congress approved March 14, 1872, the Secretary of War s authorized to sell and convey this land, if in his opinion it should for the interests of the Government to sell the same, reserving to e county of Aroostook so much thereof as was found to be necessary the monuments therein erected, by the consent of the War Departent, to establish a meridian line, which shall be granted to said county, ovided that the land so granted shall not exceed in value the sum of 00. By direction of the War Department the division quartermaster s instructed to advertise and sell so much of this land as was con-

templated by the act of Congress, and to take proper steps with a
to the transfer of the remainder to the county of Aroostook. Th
contemplated to be sold, containing 24 acres 74½ rods, was duly a
tised by posters, May 19, 1873, and on June 19, 1873, was sol
$350 to Silas T. Plummer and Lewis B. Johnson.

The value of the land reserved from sale being greatly withi
limit prescribed by the act of Congress, a deed conveying the la
the inhabitants of Aroostook County is now before the War De
ment for proper action.

The Quartermaster-General, in his last annual report, represent
the War Department the unfortunate condition of the tenure o
military posts on the frontier in Texas, and recommended that t
tention of Congress be called to this subject, and that the Secreta
War be clothed with authority to purchase the sites of such mil
posts as are already, or as may be within a few years, establish
Texas, at prices which he may determine to be just and reaso
considering the value of the land before its occupation by the U
States.

Congress, by act approved March 3, 1873, authorized the Secreta
War to purchase, at a fair price, (to be determined by a board of
officers to be appointed by him, whose report shall be subject to th
proval or rejection of the President, and the confirmation there
Congress,) such lands in the State of Texas as may be necessary f
use of the United States for forts and military posts. (For full te
act see 17th Statutes, page 614.)

Since the close of the fiscal year a board of officers, as directed b
act, has been appointed by the Secretary of War, and copies
papers in possession of this office, containing useful information re
to the sites occupied, have been furnished to be laid before the boa

ARTESIAN WELLS.

The sinking of the artesian well at Madison Barracks, N. Y.,
authority given in October, 1870, has, from recent reports, proved
cess. It affords an unfailing supply of good water, winter and sun
Its cost was $550, depth 99 feet. The sinking of two more of
depth, at a cost of $1,100, has been authorized.

Congress, on June 8, 1872, authorized the Secretary of War t
pend the sum of $10,000, or so much thereof as may be necessar
the purpose of sinking an artesian well on the Fort D. A. Russell
tary reservation, in the Territory of Wyoming.

The Secretary of War having directed, in August last, that ste
taken at once for the sinking of the well, and authorized the remit
of funds, the requisite instructions were accordingly issued to the
ion quartermaster. After boring through gravel, sand, clay,
stone, boulders and rock to the depth of 410 feet, (76 feet having
in,) and after expending $8,195.38 thereon without any promise o
cess, work was abandoned. With the remainder of the money a se
well was commenced and had been sunk (up to May 2, 1873) t
depth of 275 feet. To continue the work the Secretary of War au
ized a remittance of an additional $3,000.

POST CEMETERIES.

Authority has been granted by the Secretary of War, and instru
given by this office during the fiscal year, for erection of head-boar
the post cemetery at Fort Duncan, Tex.; board-fence for post

ry at Fort Winnebago, Wis., and completion of the adobe wall inclos- g post cemetery at Fort Bliss, Tex.

In August last the Secretary of War directed the Quartermaster- eneral to make arrangements for the removal of the remains of such ldiers and their families as were buried in the cemeteries at the aban- ned posts of Fort Arbuckle and Washita, to the national cemetery at rt Gibson, Ind. T. Instructions were accordingly issued to the divis- n quartermaster.

From the report received it appears there were one hundred and irty-one graves at these posts and in their neighborhood. All of the aves were represented as being in bad condition, very few having any arks or stakes.

A contract was made in October last with the lowest responsible dder to perform the work of disinterring, removing, and re-interring e bodies at the rate of $9.40 for each body, whole job to be completed November 25, 1872.

In March, 1872, the War Department authorized construction of stone alls around the post cemeteries at Fort Kearney, Nebr., and Fort dgwick, Colo., but it afterward appearing that the cost thereof would some $30,000, it was deemed more advisable to remove the remains deceased soldiers and their families therein interred to some more rmanent post, and the Secretary of War directed their removal, and -interment at the cemetery at Fort McPherson, Nebr., distant about e hundred miles. The estimated cost of the work was $3,000, trans- rtation being furnished by the United States.

The data on file in this office as to location of post cemeteries through- t the country, number of graves, names of deceased soldiers and hers therein interred, &c., being of a very incomplete character, chief artermasters have been requested during the year to supply the re- ired information.

Reports covering one hundred and thirteen such cemeteries have thus r been received, and when all others have been heard from it is con- mplated to have this important information recorded in a proper book record for reference, &c.

POSTS ABANDONED.

During the year the War Department authorized the abandonment of e posts of Taylor Barracks, Ky., old camps Grant, Lowell, and Crit- nden, Ariz., Fort Phœnix, Mass., and Fort McRae, N. Mex.

FIRES.

Seven fires have been reported during the fiscal year.

The barracks at Fort Phœnix, near New Bedford, Mass., were de- royed on August 27, 1872.

Two mills at Fort Buford, Dak., were destroyed November 5, 1872.

One set of company quarters, 100 feet by 15 feet, with kitchens, 20 et by 15 feet, at Fort Saint Philip, La., were destroyed November 15, 72.

One set of officers' quarters at Fort Stockton, Tex., were destroyed, gether with a few articles of quartermaster's stores, on November 17, 72.

A fire occurred in one of the two-story brick barracks, 182 feet by 34 et by 30 feet, at Baton Rouge, La., November 18, 1872, destroying all e wood-work, &c. Repair of this building has since been authorized.

On January 28, 1873, a fire occurred at the Saint Louis arsenal-de Mo., which completely destroyed the commissary and quartermast store-house, together with property belonging to the Quartermast Department therein stored.

The commanding officer's quarters at Camp Halleck, Nebr., w destroyed by fire June 23, 1873. The adjoining quarters were ba damaged from the intense heat.

RESERVATIONS.

Seven reservations have been declared by the President during year, viz: Fort Whipple, Va., July 26, 1872; Camp Harney, Or December 2, 1872; Sibley Island, Dak., February 11, 1873; Fort Al ham Lincoln, Dak., February 11, 1873; Fort Boisé, Idaho, Apri 1873; Beaver City, Utah, May 12, 1873; certain timber-lands in Ariz Territory, June 20, 1873.

PUBLICATIONS.

In 1872 the Secretary of War authorized the publication, for infor tion of officers of the Army, of "Outline-descriptions of United St military posts and stations," compiled from information furnished division commanders and quartermasters. The work gives, in a succ form, location of posts; number, description, and condition of buildi nearest supply-depot; resources; communications; description of c try, &c. The information therein contained is valuable to officers an this office. Military bureau officers, department and division comm ers, regular quartermasters, and each arsenal and garrisoned post h been provided with a copy thereof.

The Secretary of War, on recommendation of this office, authori to be published, for the information of officers on duty in the Qua master's Department, certain extracts from Creecy's Encyclopedia of C Engineering, relative to the durability of Pisé walls, and the mod building in Pisé, together with the descriptive notes on the manne constructing concrete walls, furnished by the acting assistant qua master at Sidney Barracks, Nebr., where a building for laundres quarters was constructed, last summer, of this material. On perso inspection by the Lieutenant-General of the Army, this mode of struction was strongly recommended by that officer for barracks quarters west of the Missouri River. It is believed one or the othe these methods of building is applicable at nearly every military pos station on the frontier, and that either is cheaper than adobes. A c of these extracts has been furnished to all officers of this Departm

APPROPRIATION FOR BARRACKS AND QUARTERS.

The amount of the regular appropriation for barracks and quarters was	$1,250,00
For amount of the deficiency appropriation	250,0
Total	1,500,0

Information as to remittances made and their classification wil found in annual report of the finance branch of this office.

At the close of the fiscal year $31,488.93 of the appropriation for racks and quarters remained undrawn at the Treasury. This bala as also funds then in hands of officers, will be absorbed in paymen outstanding indebtedness for materials, rents, hire of mechanics, &c., and, in addition, a deficiency appropriation will probably be ne sary to meet the expenses of the year.

CLAIMS.

The following statements exhibit the number of transportation claims nd accounts, and claims under act of July 4, 1864, and miscellaneous laims on hand, July 1, 1872, received and acted upon during the year, nd remaining on hand June 30, 1873:

tatement of accounts and claims in the transportation division, Quartermaster-General's Office, for the fiscal year ending June 30, 1873.

	No.	Value.	No.	Value.
umber of accounts and claims on hand July 1, 1872	156	$277, 644 45		
umber of accounts received during the fiscal year	624	1, 299, 290 39		
umber of claims received during the fiscal year	458	387, 331 69

QUARTERMASTER-GENERAL'S OFFICE, *September*, 1873.

VI.—*Report of Capt. A J. McGonningle, assistant quartern U. S. A.*

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFIC
Washington, D. C., September 22, 1

GENERAL: I have the honor to submit the following report o operations of the cemeterial branch of this office during the fiscal ending June 30, 1873.

The number of interments in the national cemeteries reporte year, 317,962; the number of bodies of Union soldiers since inter the cemeteries, 148; number removed by friends, none; remaini the cemeteries, 318,110; the number of known, 170,287; unk 147,823.

On the 5th of December, 1872, the Secretary of War directed t tablishment of a national cemetery at Fort McPherson, Nebr., an removal thereto of the remains interred at Forts Sedgwick and ney.

By act of Congress approved March 3, 1873, the American b ground near the city of Mexico was designated a national military etery.

The appropriation for national cemeteries for the year ending 30, 1873, was $250,000, of which amount the sum of $527.03 rem undrawn in the Treasury at the end of the fiscal year.

The following work has been done during the year: Brick walls been erected or are now being erected around the following cemet viz: New Berne and Raleigh, N. C., Beaufort and Florence, S. C. Memphis, Tenn.; stone walls around the following cemeteries, viz: ville, Glendale, Seven Pines, and Staunton, Va., Salisbury, N. C Forts Leavenworth and Scott, Kans.

Superintendents' lodges have been or are now being erected a national cemeteries at Danville, Glendale, and Seven Pines, Va leigh and Wilmington, N. C., Camp Nelson, Logan's Cross-Road Lebanon, Ky., Memphis, Chattanooga, Fort Donelson, and Kno Tenn., and Fort Smith, Ark.

At the following national cemeteries permanent inclosures a quired, viz: Andersonville, Ga., Fort Gibson, Ind. T., Grafton, W and Fort McPherson, Nebr.

At the following national cemeteries permanent lodges are req viz: Grafton, W. Va., Beverly, N. J., and Fort McPherson, Nebr.

During the past fiscal year the grounds at all the cemeteries been kept in good order, and permanent improvements, such as age, wells, cisterns, and green-houses added, as the means at com would allow.

A handsome arched gateway, similar to the one erected at th lington, Va., national cemetery, has been built at the Nashville, national cemetery.

The Antietam national cemetery has not yet been transferred b cemetery association to the United States.

Four civil engineers are employed by this Department, with sta at Washington, D. C., Raleigh, N. C., Nashville and Memphis, whose duty it is to inspect and report upon all permanent work on at the cemeteries, mark the lines for the walls, and determin sites for the lodges.

By an act of Congress approved March 3, 1873, $1,000,000 wer propriated for the erection of a head-stone at each grave in the na ilitary cemeteries, to be made of durable stone and of such design nd weight as shall keep them in place when set. The act further pro- des "that the contract shall be awarded by the Secretary of War ter sixty days' advertisement in ten newspapers of general circulation, nd the Secretary of War shall first determine for the various cemeries the size and model for such head-stones, and the standard of uality and color of the stones to be used."

A copy of the advertisement inviting proposals accompanies this re- ort, together with a copy of the published specifications in detail, the andard fixed by the Secretary of War.

The list which accompanies the latter is intended to exhibit only the umber of graves at each cemetery which require head-stones, and does ot include those for which head-stones or monuments have already een provided, nor the number of unknown remains in the Salisbury metery over which one monument is to be erected. Hence the dis- epancy between the totals stated in that list and the total number of terments as given in this report.

By an act approved March 3, 1873, the sum of $10,000 was appropri- ed for a monument at the Salisbury, N. C., national cemetery, wherein e the remains of 12,112 men, most of them not identified. Several ar- sts have been invited to submit designs for such a monument. Three esigns have been received thus far.

Superintendents are required at sixty-six national cemeteries. Seven ere appointed during the year, one died, and one was discharged; xty-five remained on duty at the close of the fiscal year.

Very respectfully, your obedient servant,

A. J. McGONNIGLE,
Captain and Assistant Quartermaster, U. S. A.

Brig. Gen. M. C. MEIGS,
Quartermaster-General, U. S. A.

Proposals for head-stones for national military cemeteries.

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE.
Washington, D. C., June 27, 1873.

Proposals are invited for furnishing head-stones for the national military cemeteries prescribed by the law of 3d March, 1873, of which the following is an extract:

" *Provided*, that the head-stones required by an act entitled 'An Act to establish and otect national cemeteries,' approved February 22, 1867, and the act amendatory ereof, approved June 8, 1872, shall be of durable stone, and of such design and weight shall keep them in place when set; and the contract for supplying the same shall be varded by the Secretary of War, after sixty days' advertisement in ten newspapers of neral circulation, to some responsible person or persons whose samples and bids shall the greatest measure combine the elements of durability, decency, and cheapness; d the sum of one million dollars is hereby appropriated for said purpose out of any oney in the Treasury not otherwise appropriated; and the Secretary of War shall st determine for the various cemeteries the size and model for such head-stones, and e standards of quality and color of the stone to be used, and bids shall be made and cided with reference thereto; and contracts may be made for separate quantities of ch head-stones; and the contracts made under this act shall provide for furnishing d setting all the said head-stones, and shall not in the aggregate exceed the sum reby appropriated."

The total number to be furnished is estimated at [*]253,088 for the known, 147,694; r the unknown, 105,394.

---

[*] These figures could only be estimated when the advertisement was prepared, as full ports from some officers in charge of cemeteries had not then been received; hence e discrepancy existing between the above figures and the total number in list accom- nying the specifications, the latter having been corrected from reports received after e advertisement had been prepared.

Specifications, describing in detail the standard fixed by the Secretary of Wa be had on application by letter to this Office, where also a specimen will be plac exhibition within a few days.

Proposals should be in sealed envelopes, marked: "Proposals for head-stone national military cemeteries," and addressed to the Quartermaster-General of Army, in whose Office they will be opened, in presence of bidders, on Saturday, tember 6, 1873, commencing at 11 o'clock a. m.

By order of the Secretary of War.

M. C. MEIGS,
Quartermaster-General, Bvt. Maj. Gen., U. S.

Capt. and Assistant Quartermaster, U. S.

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., August 15, 18

Mr. —— ——,

SIR: In addition to the information contained in the specifications for head-s for soldiers' graves, you are advised that abbreviations may be made in the Chri or first name of the deceased, also in his rank, and in the name of his State, thus

WM. C. JONES, PVT., MASS.

SAM. H. WALKER, LT. COL., PA.

Where the name of the deceased is long, it must be put on the stone in a curve, the rank and name of the State below.

By order of the Secretary of War.

M. C. MEIGS,
Quartermaster-Gene

Specifications for head-stones for national military cemeteries.

FOR THE KNOWN.

A white marble or gray granite slab, four (4) inches thick, ten (10) inches twelve (12) inches high above ground, and, for the latitude of Washington, and so twenty-four (24) inches in the ground; north of that latitude, thirty (30) inch the ground.

The part above ground to be polished neatly, and to have the top slightly curv

The number of the grave, the rank and name of the soldier, and the name o State from which he came, to be cut on one face; the figures and capital letters to inches long and ¼ inch deep; the other letters one inch long and ⅛ inch deep. letters may be in relief or incised, at the option of the bidder.

The portion below ground to be rough-dressed, and at least ½ inch wider and th than the part above ground. The bottom to be straight and of uniform thickness h corners square.

FOR THE UNKNOWN.

A granite or marble block six inches square and two and one-half feet long, (6″ × 2′ 6″.)

The top and four inches of the sides of the upper end to be neatly dressed, and number of the grave cut on the top in figures 2½ inches long and ½ inch deep, o lieved. When the figures are more than three, they will be arranged in a curve ar the margin.

The top to be flat or slightly convex; the bottom to be flat and full six in square; the rest of the block to be rough-dressed or split, but to be of full throughout.

The block to be firmly set in the ground so that the top shall be just even with top of the grave.

The marble for the *slabs* to be white, of fine grain, good texture, and hard; for the *locks*, to be nearly white, of pretty fine grain, and good texture—to be a good durable arble.

The granite for the *slabs* to be of uniform gray, of a fine grain, uniform mixture of he ingredients, and free from all oxides; for the *blocks*, to be gray, of pretty close rain, and to be a good granite for building purposes.

Specimen head-stones, giving the form, the style of finish, and the quality of the one required, will be exhibited in the Quartermaster-General's Office in a few days.

NOTES.

1. These slabs may be of uniform width and thickness throughout, (viz: 10 inches ide and 4 inches thick,) at the option of the bidder.

2. The granite slabs may be fine-pin hammered on the back, and the face rubbed or nded smooth.

3. The term *polished* is used to signify the usual manner of finishing marble head-ones.

QUARTERMASTER-GENERAL'S OFFICE,
Washington, June 27, 1873.

REPORT OF COMMISSARY-GENERAL OF SUBSISTENCE.

REPORT

OF THE

OMMISSARY-GENERAL OF SUBSISTENCE.

OFFICE COMMISSARY-GENERAL OF SUBSISTENCE,
Washington City, *October* 10, 1873.

SIR: I have the honor to submit the following report of the opera- ons of the Subsistence Department of the Army for the fiscal year rminating June 30, 1873:

During the year subsistence supplies for the Army have been pro- ured, distributed, stored, and sold or issued to officers, enlisted men, vilian army employés, and others whose connection with the Army titles them to such supplies, by the methods required by law and rmy Regulations, and under appropriate requisitions and orders of a neral or special nature, no changes having taken place during the ar in the sources of such supplies, except such as necessarily follow eir increasing production and decreasing cost at points nearer the oops to be supplied.

Responsible officers of the Subsistence Department stationed at the adquarters of the several geographical divisions and departments as ief commissaries, acting constantly under the knowledge and ap- oval of their respective commanding generals, are charged, under nformity with the laws and regulations and the orders or decisions of e Secretary of War or Commissary-General, with the procurement, stribution, care, and issue of the necessary supplies.

During the fiscal year ending June 30, 1873, there were reported to is Office 205 advertisements inviting proposals for supplies, 305 con- acts for fresh meat, 62 contracts for complete rations, 127 contracts r miscellaneous articles, and 298 contracts, consisting of written pro- osals and acceptances.

The average price of fresh beef per contracts made during the year as as follows, in the several States and Territories:

States or Territories.	Cents per pound.	States or Territories.	Cents per pound.	States or Territories.	Cents per pound.
aine	13.62	Alabama	9.12	Dakota Territory	9.09
assachusetts	14.00	Mississippi	10.50	Wyoming Territory	8.88
ode Island	11.75	Louisiana	9.00	New Mexico Territory	8.53
nnecticut	10.00	Texas	5.04	Colorado Territory	7.18
w York	11.69	Tennessee	8.68	Utah Territory	7.87
nnsylvania	10.54	Kentucky	8.68	Montana Territory	9.15
aryland	10.81	Illinois	7.95	California	11.70
strict of Columbia	12.20	Michigan	10.85	Oregon	7.36
rginia	11.93	Missouri	5.50	Arizona Territory	13.87
rth Carolina	11.16	Minnesota	8.85	Washington Territory	9.18
uth Carolina	10.72	Nebraska	7.35	Idaho Territory	11.82
orgia	8.37	Kansas	8.68	Nevada	15.67
orida	8.66	Indian Territory	7.12		

Making the average contract price for the year 9.81 cents per pound net, eing 5½ mills less than for the previous year.

The average cost of the complete ration for the fiscal year ending June 30, 1873, at ten of the principal points of purchase was as follows:

Months.	New York, N. Y.	Baltimore, Md.	Louisville, Ky.	Saint Louis, Mo.	Saint Paul, Minn.	Omaha, Nebr.	Fort Leavenworth, Kans.	Chicago, Ill.	New Orleans, La.	San Francisco, Cal.

Average	16.69	19.67	15.02	16.16	16.40	17.82	17.64	14.96	18.55	21.96

Making the general average for the year seventeen cents and forty-eight hundredths per ration, showing an increase of thirty-four hundredths of a cent over the average of the previous year.

Under the requirements of section 6, act of March 3, 1865, the Subsistence Department has during the year furnished tobacco for sale to the enlisted men of the Army at cost price, to the amount of $152,489.40, the average monthly sale being $12,707.45.

It is respectfully requested that tobacco be furnished to the enlisted men of the Army by issue as a component part of the regular ration, instead of by sale, and that the ration of tobacco be, as near as may be, the same amount as is at present authorized to be sold to them, viz. 16 ounces per month.

Under the provisions of section 16 of the act of June 30, 1834, and paragraph 1202, Revised Regulations for the Army, 1863, subsistence supplies to the value of $19,925.68 have, in the discretion of commanding officers, been issued gratuitously to Indians of the various tribes visiting military posts, or in their respective nations, no part of which amount is returned to the appropriation for the subsistence of the Army.

During the fiscal year there were received from 415 officers of the Army on duty in the Subsistence Department, who were responsible for subsistence funds or supplies,

3,143	returns of provisions.
1,089	returns of commissary property.
3,231	accounts current.
7,463	total accounts and returns;

7,463 total accounts and returns; of which all have been examined and forwarded to the Third Auditor of the Treasury for final settlement, with the exception of 876, which await examination in this Office.

Under the act of June 23, 1870, as extended by the act of June 7, 1872, authorizing the proper accounting officers of the Treasury, in the settlement of certain accounts of disbursing officers of the Army and Navy, to allow such credits for over-payments and for losses of funds, vouchers, or property, as they may deem just and honorable, when recommended, under authority of the Secretaries of War and Navy, by the heads of the military and naval Bureaus to which such accounts reectively pertain, credits have been recommended in the cases of 370 sbursing officers in the sum of $107,236.77, making the total number officers relieved under the operation of the acts cited 767, in the total nount of $216,557.56.

Up to, and including, the 27th day of September, 1873, 6,096 claims, nounting to $3,312,757.68, had been submitted for examination under e third section of the act of July 4, 1864, for subsistence alleged to ave been taken or furnished during the war for Army use in States ot in rebellion; 105 of these, accompanied by regular vouchers given y the officers when purchasing the stores, have been recommended for ayment, in the aggregate sum of $9,152.75, by the Third Auditor of the reasury, as purchases under contract, while 1,301 others (aggregating 431,443.31) have been recommended to him for settlement under the t, in the aggregate amount of $308,295.79; and 4,443, amounting to 2,682,644.18, have been examined and disallowed.

Up to the 30th of September, 1873, there have been received and paid 525 certificates for commutation of rations to Union soldiers (prisoners of war) and their heirs, as authorized by the joint resolution of uly 25, 1866, and section 3 of the act of March 2, 1867, amounting to 287,318.

Under the act of March 3, 1873, to provide for the better care and rotection of subsistence supplies, by selecting from the sergeants of the ne of the Army, who shall have faithfully served therein five years, as any commissary sergeants as the service requires, not to exceed one r each military post or place of deposit of subsistence supplies, there ave been selected and appointed 149 commissary sergeants, who have een assigned to the same number of military posts; a considerable umber of whom have been in the performance of their duties a suffient length of time to show that they have performed them in a highly tisfactory manner, and already to give evidence that the benefit to e service that was anticipated would result from having such a body of xperienced and worthy non-commissioned officers will be fully realized. hese commissary sergeants have been selected from those sergeants of e line of the Army eligible under the law, who have an honorable ecord and are recommended by their company and regimental comanders; such recommendations in the majority of cases being accomanied by testimonials of character, capacity, and honorable service in e line as soldiers and non-commissioned officers by officers under whom ey have served.

The officers of this department, their rank and assigned stations and uties, are as follows:

HEALTH OF THE ARMY DURING THE FISCAL YEAR ENDING JUNE 30, 1873.

The monthly reports of sick and wounded received during the year represent an annual average mean strength of 24,844 white and 2,520 colored troops.

Among the white troops, the total number of cases of all kinds reported as taken on the sick-list was 48,767, being at the rate of 1,963 per 1,000 of mean strength. (That is very nearly two entries on the sick eport during the year for each man.) Of the whole number 41,398, or ,666 per 1,000 of strength, were taken on sick report for disease, and ,369, or 297 per 1,000 of strength, for wounds, accidents and injuries.

The average number constantly on sick report during the year was ,219, or 49 per 1,000 of strength; of these 978, or 39 per 1,000 of trength, were under treatment for disease, and 241, or 10 per 1,000 of trength, for wounds, accidents, and injuries.

The total number of deaths reported was 412, or 17 per 1,000 of mean trength. Of these 246, or 10 per 1,000 of strength, died of disease, and 66, or 7 per 1,000 of strength, of wounds, accidents, and injuries. The roportion of deaths from all causes to cases treated was 1 death to 118 ases.

Eight hundred and ninety-four white soldiers are reported to have een discharged on "surgeon's certificate of disability," being at the ate of 36 per 1,000 of mean strength.

The reports from the colored troops give the following figures, which lo not include the white officers.

The total number of cases of all kinds reported was 4,305, or 1,708 per ,000 of mean strength. Of these 3,625, or 1,438 per 1,000 of strength, vere cases of disease, and 680, or 270 per 1,000 of strength, were wounds, ccidents, and injuries.

The average number constantly on sick report was 122, or 48 per 1,000; f whom 94, or 37 per 1,000, were under treatment for disease, and 28, or 1 per 1,000, for wounds, accidents, and injuries.

The number of deaths from all causes reported was 53, or 21 per 1,000 f strength. Of these 46, or 18 per 1,000 of strength, died of disease, and , or 3 per 1,000, of wounds, accidents, and injuries. The proportion of leaths from all causes to cases treated was 1 death to 81 cases.

The number of discharges on "surgeon's certificate of disability" reported was 60, or 24 per 1,000 of mean strength.

WORK PERFORMED IN THE RECORD AND PENSION DIVISION.

The number of official calls for information from the Record and Pension Division is somewhat less than during the previous years, but still ontinues to be large. During the fiscal year terminating June 30, 872, as stated in my last annual report, 19,237 applications were received, of which 4,827 remained unanswered at the close of the year. From that time to June 30, 1873, the total number of new applications or information received was 16,601, of which 11,080 were from the Commissioner of Pensions, 5,125 from the Adjutant-General of the Army, and 96 from miscellaneous sources. These new cases added to the 4,827 cases emaining on hand at the commencement of the year made 21,428 to be lisposed of.

Search was made and replies furnished to the proper authorities in 9,875 of these cases, viz: 13,422 to the Commissioner of Pensions, ,005 to the Adjutant-General of the Army, and 448 to miscellaneous applicants, leaving 1,553 unsearched cases on hand on the 30th of June, 873.

As during previous years, the applications for information continue to efer chiefly to the cause of death or discharge from service and the ospital history of soldiers dead or disabled during the war of the rebelion. This information is used in the adjustment of pension and other laims, and serves both as a protection to the Government against fraudulent claims, and as an aid in establishing the merits of worthy ones. It is thought that hereafter the amount of such work required of this Office will slowly but steadily diminish.

DIVISION OF SURGICAL RECORDS.

At the date of the last annual report there were entered on the
ters abstracts of 207,135 surgical cases and of 39,291 surgical opera
or an aggregate of 246,426 surgical histories. During the year 1
cases of wounds and injuries, and 743 cases of operations, have
entered, making the aggregate 219,873 cases of wounds and 4
cases of operations, or a grand total of 259,907.

Supplementary information was added, results determined, &
15,612 of these cases from the files of the Office, and in 2,683 case
remote results of injuries were ascertained from the pension record

Four thousand six hundred and sixteen reports, letters, and ind
ments were received, indexed, and filed, and, in addition to routin
knowledgments, 566 letters were written.

Fifteen casts of pathological specimens and two volumes of pl
graphs were placed at the disposition of Prof. J. B. S. Jackson, t
presented to the museum of Harvard University.

From this it will be seen that although having attained an al
unprecedented size and value, this national collection continue
increase in importance and is becoming more generally appreciated
utilized. During the year 22,560 visitors registered their names.

MEDICAL AND SURGICAL HISTORY OF THE WAR.

The distribution of the first part of the Medical and Surgical History of the War having been authorized by Congress, about 1870 copies were available for issue from this Office as shown by the following statement:

Sent to congressional committees, as specimens	12
Sent to Senators	1,000
Sent to Representatives	2,000
Sent to Library of Congress	50
Damaged and imperfect copies	70
To be issued by Surgeon General's Office	1,868
Total number of copies printed	5,000

The delivery of copies from the Government Printing Office commenced in February, 1873, and they have been distributed as fast as received.

The demand for the work has been very great, and the number of copies placed at the disposal of this Office proves insufficient to supply those who as ex-medical officers, having rendered satisfactory service through the war, may be considered as properly entitled to it.

The second part of the work is now going through the press as rapidly as possible.

The interest felt by the medical profession of the country in the attempt to establish a national medical library worthy of the name, in connection with the Army Medical Museum, has steadily increased, as shown by letters received and by numerous presentations of books and pamphlets during the year. The library now contains about 25,000 volumes and 15,000 pamphlets, and although still very incomplete when compared with similar national collections in Europe, is at present the largest in this country. A new catalogue is now being printed which will, it is believed, be a valuable contribution to medical bibliography.

I would respectfully renew the recommendation made in my annual reports of 1870 and 1872, "that the necessary legislation be procured to enable me to publish an edition of one thousand of the Catalogue and Tables of the Anatomical Section of the Army Medical Museum, in a style similar to Morton's *Crania Americana*." A bill for this purpose (H. R. 3453) passed the House, and was before the Military Committee of the Senate at the close of the last session of Congress, thus failing to become a law.*

---

* The following report, No. 56, from the Committee on Military Affairs of the House of Representatives, dated February 4, 1873, sets forth more fully the reasons for the above request:

[Report to accompany bill H. R. 3453.]

The Committee on Military Affairs, to whom was referred H. R. 3453, entitled "A bill to provide for the printing at the Government Printing Office of one thousand copies of the Descriptive Anatomical Catalogue of the Army Medical Museum," have had the same under consideration, and submit as a statement of the facts in the case, and as reasons for the passage of the accompanying bill, the following communications from the Surgeon-General, which are made a part hereof:

War Department, Surgeon-General's Office,
Washington, January 18, 1873.

Sir: In reply to your letter of the 17th instant, asking for "a statement of the facts going to show the *importance* of printing the Descriptive Anatomical Catalogue of the Army Medical Museum," contemplated in the bill H. R. 3453, I have the honor to represent that it is mainly through the printed catalogues that the collections of the museum are made available to scientific students, the majority of whom cannot personally examine them. Catalogues of the surgical, medical, and microscopical sections have been already printed, and their distribution has resulted, not only in widely diffusing a knowledge of the contents of the museum relative to those subjects, but in

I am compelled to again repeat the statement made in previou
ports that very serious and increasing injury has resulted to the se
from the continued prohibition of appointments and promotions i
medical corps. The inducements of pay and rank, as at present e
lished, are not sufficient to make the service attractive or remuner
to physicians already engaged in practice; and though, through the
requisite rigid examination of candidates, it has heretofore been f
possible to secure a high grade of talent and qualification, it is
the younger portion of the profession, the recent graduates, th
must depend in filling up existing vacancies. As a large proporti
applicants fail to pass satisfactory examinations (which require in
case from three to six days) it will be the work of several yea
restore the corps to the necessary standard of numbers as provide
in the act of Congress approved July 28, 1866. Although ambiti
pass the Army medical board brings forward many of the most pr
ing graduates of the medical colleges, additional inducements of r
pay, and promotion are becoming more and more necessary, not on
make the number of candidates equal to the needs of the service, b
retain the most desirable of them in the service under their freq
inducements to accept advantageous offers in civil life. The acti
the American Medical Association, representing the medical profe
of this country, regarding the unequal position of medical officers c

---

large voluntary contributions to the collections. These have now attained
importance, that few recent works on military medicine, surgery, and hygiene
omitted to refer largely to the rich and reliable stores of information gathered v
the walls of the museum.

It is now proposed to print an *anatomical* catalogue, in which the most imp
feature will be the craniological chapter. The measurement and comparison of h
skulls is an interesting and difficult branch of the natural history of man, whic
of late received much attention in the scientific world. It is a study that can o
pursued by a few anatomists, having access to large collections of crania, an
requisite experience and skill to measure accurately. Craniology, established
science by Blumenbach and Camper, was prosecuted in this country by Morton
great success. His work was published by subscription. The medical officers c
Army have collected a much larger series of American skulls than have ever l
been available for study. The collection embraces many ancient crania from
and tumuli, from Greenland and Alaska to Florida and Arizona, and specimens
the majority of the existing tribes of Indians, and of the extinct tribes of the hi
period. These, as well as a sufficient series of skulls of the white and black
have been carefully measured and figured by orthographic drawings, so tha
dimensions may be verified. Anthropologists in different parts of the world are an
for the data thus accumulated for comparison with similar data published in Sw
Russia, Germany, Italy, France, and England. The French government, throug
legation here, after making repeated applications for the tables of cranial mea
ments, employed an artist to make casts and take photographs of a series of ty
skulls; and a professor of Bonn made the study of the collection the object of a
across the Atlantic. I mention these facts as an indication of the importance c
collection in the eyes of foreign savants; but it is especially with a view of ena
scientific students in our own country to utilize the collection that I urge the pu
tion of this catalogue.

In addition to the unique collection of crania, the anatomical cabinet posse
good series of preparations and drawings of the various organs of the body, pro
classified and catalogued. To render these accessible to students, a printed cata
is simply a necessity.

I take what I trust may be esteemed a pardonable pride in the reflection that
important collection has been accumulated through the almost unaided zeal a
dustry of the medical officers of the Army, and, I was about to say, entirely wi
cost to the Government. It is true, however, that a few preparations have
obtained by purchase, but by far the largest proportion have been collected b
medical officers, or procured in exchange for objects of ethnological interest coll
by them.

If the members of the committee would contrast the results obtained wit
small annual appropriation of $5,000 for the Army Medical Museum with the con

rmy—as compared to that of other staff corps—is based upon actual
vestigation of the subject, and presents to Congress all the facts in
he case.

I can only urge most earnestly upon your attention the pressing and
bsolute necessity for such legislation as will secure to our officers and
oldiers the efficient and reliable attendance in wounds and sickness
hich the Government should provide, and will make a position in the
edical corps of the Army, now as formerly, an object of ambition to
he best educated and best qualified young men in the profession.

At the date of my last report there existed fifty-nine vacancies in the
edical department, viz: two assistant medical purveyors, four sur-
eons, fifty-two assistant surgeons, and one medical store-keeper. Dur-
g the past year one surgeon and one assistant surgeon have died,
nd three assistant surgeons have resigned; leaving at present sixty-
our vacancies in the corps, viz: two assistant medical purveyors, five
urgeons, fifty-six assistant surgeons, and one medical store-keeper.

J. K. BARNES,
Surgeon-General, U. S. A.

To the Hon. the SECRETARY OF WAR.

---

foreign national museums, and the large sums annually voted them, the progress
ere accomplished would be appreciated, the results being possible only because the
bor has been performed, as incidental to their legitimate duties, by those already in
e Government service.

I have restricted myself to a concise statement of the importance of the proposed
talogue. Should the members of the committee desire more details, I would respect-
lly suggest that Assistant Surgeon Otis, who is familiar with them, should be granted
hearing before the committee.

I am, sir, very respectfully, your obedient servant,

J. K. BARNES,
Surgeon-General United States Army.

Hon. JOHN COBURN,
Chairman Committee on Military Affairs.

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,
Washington, D. C., January 24, 1873.

SIR: I have the honor to forward the following estimate of cost of printing and
nding Catalogue of the Anatomical Section of the Army Medical Museum, viz:

For 1,000 copies:

lates and wood-cuts	$20,000
aper, composition, and printing	2,700
nding, in cloth	1,000
nding, in leather	2,500

For 5,000 copies the cost will be:

r plates	$38,000
aper, composition, and printing	7,500
nding, in cloth	5,000
nding, in leather	12,500
tal cost, 1,000 copies, in cloth	23,700
tal cost, 5,000 copies, in cloth	50,500

Very respectfully, your obedient servant,

J. K. BARNES.
Surgeon-General United States Army.

Hon. JOHN COBURN,
Chairman Military Committee House of Representatives.

The committee recommend the passage of the accompanying bill.

REPORT OF THE PAYMASTER-GENERAL.

REPORT

OF

THE PAYMASTER GENERAL.

PAYMASTER-GENERAL'S OFFICE,
Washington, October 10, 1873.

SIR: I have the honor to submit my annual report of the transactions the pay department of the Army for the last fiscal year ending 30th ne, 1873.

Tabular statements herewith inclosed show in detail the fiscal operons of the department for that year, summarily stated as follows:

RECEIPTS AND DISBURSEMENTS.

ance on hand at beginning of fiscal year, (July 1, 1872)		$2,289,221 94
eived during fiscal year from Treasury		14,008,477 95
eived from soldiers' deposits		209,850 38
cellaneous receipts		221,079 32
Total		16,728,629 59
bursed to the Army	$11,056,522 35	
bursed to the Military Academy	176,010 97	
bursed on Treasury certificates	1,936,230 16	
Total disbursements	13,168,763 48	
plus funds deposited in Treasury	1,188,467 30	
cellaneous receipts deposited	218,407 00	
ance in hands of paymasters June 30, 1873, to be ccounted for in next report	2,152,991 81	
Total		16,728,629 59

The most important matter which it is my duty to bring before you the imperative necessity of more paymasters. The sixth section of e act of 3d March, 1869, forbids any appointments and promotions in e staff of the Army until further legislation. The thirty-first section the act of 7th July, 1838, forbids the detail of officers of the Army as ting paymasters. Thus the Pay Department has not the resources of e Quartermaster's or Subsistence Departments; for details for temrary duty in those departments have always been made, as also for y of the other departments of the staff.

There are now sixteen vacancies in the Pay Department under the ganization provided by the act of 28th July, 1866, two in the rank of utenant-colonel and fourteen in the rank of major, five of these vancies occurring since my last annual report. The duties of paying the troops during the last year have been performed in as satisfac a manner as could be expected, considering the reduced number of masters. I shall do but simple justice to them when I say that have faithfully and efficiently discharged their duties, oftentimes in remote and exposed regions on the frontier. One excellent officer been lost at sea and two attacked by robbers (fortunately foiled in audacious attempts) during the last year, which facts exhibit dangers incident to their tours of duty. The War Department sh have it in its power to give respite and relief to many on remote tions, which can only be accomplished by an increase of the numb paymasters. But without reference to those considerations, an incr is needed for the absolute wants of the service.

I recommend that the number of paymasters be now establishe fifty-two instead of sixty as provided by law in the eighteenth sec of the act of 28th July, 1866, and a repeal of the interdict upon fu appointments and promotions. It is but just that the power of pr tion should be restored to the Executive; for what is an army staff corps good for, in which the principle of promotion is not re nized?

I recommend that a greater period than thirty days be allowed t officer on leave of absence without reduction or pay. Thirty barely suffices to enable an officer to travel from remote departmen the East and return. By the eleventh section of the act of 20th J 1864, it was enacted that "leave of absence for other cause than ness or wounds may be allowed an officer by order of his proper mander, without deduction from his pay and allowances: *Prov* That the aggregate of such absence shall not exceed thirty days in one year." A previous act (of 3d March, 1863) provided that th duction should be one-half the pay and allowances of the officer.

The only other legislation concerning the Pay Department whi recommend is, that the pay of paymasters' clerks should be increa It is now $100 per month. A large share of their duties is dischar in regions where the journeys are arduous and very dangerous—regi too, having many attractions to draw them from our employment. superior pay enjoyed by clerks of the Quartermaster's and Subsist Departments has often worked to the injury of the Pay Departm Expert clerks of this Department have resigned and gone into t Departments. This is but the natural effect of inadequate compe tion and of the existing inequalities.

The acts of 15th May, 1872, concerning the pay of the enlisted and establishing a system of deposits, have signally ameliorated t condition. But they have not yet reduced the number of desertion much as we had hoped. Still the number of desertions in the Arm the fiscal year ending 30th June, 1873, was five hundred less than in previous year, and one thousand less than in the year ending 30th J 1871. It would be difficult to devise legislation better calculated those acts to encourage re-enlistments, reward faithful service, and minish desertions. It may require the experience of several year develop their full effect upon the rank and file of the Army. Som the company commanders represent that the interest given for depo should have been established at 6 per cent., instead of 4 per cent., annum.

I append to this report a table exhibiting the average amount of posits per company during the fiscal year ending June 30, 1873, in various military departments. From this it appears that the lar amount of deposits per company was in the Department of Ariz iz, $1,583; next, in the Department of the Columbia, $717 per company. In these departments there was the greatest amount of field op-rations, the troops being in campaign against the Apaches and Modocs.

This shows, as I expected, that in time of war the most deposits will e made by the enlisted men. During the civil war such a system would ave given the Government the handling of many millions for years.)uring the last years of the war there were at least about 14,000 companies of troops employed. This, at the rate of $1,500 deposited by ach company, would have made $21,000,000 per annum.

During the year ending 31st August, 1873, $246,643 (or an average xceeding $20,000 per month) have been deposited, the use of which the -overnment will have for an average period of about two and one-half ears.

Respectfully submitted.

BENJ. ALVORD,
Paymaster-General United States Army.

The Hon. the SECRETARY OF WAR.

BENJ. ALVORD,
Paymaster-General United States Army.

REPORT OF THE CHIEF SIGNAL-OFFICER.

REPORT

OF

THE CHIEF SIGNAL-OFFICER.

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., November 1, 1873.

SIR: Instruction in military signaling and telegraphy has continued
uring the past year at the Signal-School of Instruction and Practice at
ort Whipple, Va.

One of the officers at the Military Academy at West Point is designated
instructor of military signals and telegraphing, but no report has been
ceived from him, and it is not known what proportion of study and
actice is allotted the several branches under his charge. Experience
ads to the belief that the whole time of a skilled and industrious officer
ould be occupied by a course of instruction of the cadets at West Point,
hich should insure to them that proficiency in military signaling and
legraphy requisite to maintain equality in these branches with the of-
cers of European services, or to be of any practical value to the Army
the United States. The recommendation made in previous reports
at more special instruction at the Military Academy should be pro-
ded for, with a merit value affecting the standing of the cadets, is re-
wed, and it is also suggested that, to secure accuracy and uniformity,
e officer to be in future charged with that instruction should have
ssed the course at Fort Whipple. There has been a partial instruc-
on in the Department of the Missouri, under the charge of Second Lieut.
hilip Reade, Third United States Infantry, and acting signal-officer of
at Department. Although this officer has not had the advantage
the course provided at Fort Whipple, his industry and zeal have
en attended with good results. His reports show fifty five officers to
ve been fully, and ninety-seven partially, instructed, and one hundred
d two enlisted men fully, and three hundred and ten partially, in-
ructed during the year.

The only full and regular course of instruction, that at Fort Whipple,
s continued to be under the immediate direction of First Lieut. C. E.
ilbourne, Second United States Artillery, acting signal-officer, who
s proved faithful and efficient. The report of commissioned officers
structed, (six in number,) with their respective amounts of field-prac-
ce, is given in Papers 1 and 2, hereto attached. The number of private
ldiers instructed, as candidates for promotion to the grade of observer-
rgeant, has been sixty-seven, and of those instructed as assistants to
server-sergeants, one hundred and twenty-seven. The details of their
struction, examination, promotion, and duty are presented in Papers
and 4.

The Signal-School of Instruction and Post of Fort Whipple, Va., has,
uring the year, assumed a character of permanence which has been
uch desired. New barracks, a mess-hall, a guard-house, and stables

have been erected; and two buildings for officers' quarters, a buil for the purposes of instruction, and a wagon-shed for the field-teleg train, are in progress of construction. The hospital has proved a for the requirements of the command, and has been well managed u the charge of Acting Assist. Surg. L. W. Ritchie. A large amou work has been performed in the leveling and preparation of the gr occupied by the old fortifications. To complete the equipment of the in addition to the need for a commissary and quartermaster store-h a wagon-shed for quartermaster wagons, and stabling for neces public animals, a pressing want is felt for officers' quarters, those provided not being sufficient for the number of officers regularly on and under instruction. The Fort has become of interest to, and i quently visited by, distinguished American citizens and officers of fo governments. It is desirable that the War Department, always sidered responsible for its existence, should provide for it as a credit and representative post. The care of the Secretary of War has already directed to the comfort of the enlisted men. His favorable sideration is now asked to secure the requisite accommodation fo officers and the protection of the public property.

The field-telegraph train has been greatly improved, and drills it are regular and satisfactory, having been under the special dire of First Lieut. R. P. Strong, Fourth United States Artillery, acting nal-officer, who has, during the year, been in immediate charge of post, and has shown much energy in the performance of the duties fided to him. The other drills of the signal-service detachment, signal equipments, and with, as well as without, arms, have been thor and through increased facilities as well as numbers discipline has advanced. The system of duty and practice at Fort Whipple give military training necessary for the duties of the signal-service, a imparts the accurate understanding of the special branches for whi has been established. It is the sole place in the United States where e commissioned officers or enlisted men can be completely instructed tested in a branch of the military profession now recognized to b prominent importance in time of war, and of no less utility in tim peace.

The study of military signaling and telegraphy requires that the dent shall have the example and illustration of a skilled master would be unwise, in providing for the instruction of the Army ignore the thorough and well-appointed school already established, to expect much benefit from the mere issue of text-books and e ments, where teacher and taught are alike ignorant. The plan, at time suggested, that post-adjutants should become instructors, proved a failure.

During the past year a number of officers have applied to b structed at Fort Whipple; but the absence of any arrangement fo tails has prevented, for the time, a favorable consideration of t requests. It is desirable that a system of details should be establis The proper discharge of the duties of the field signal-service sin *i. e.*, those embracing only such knowledge of military signaling telegraphy as is constantly requisite at our frontier posts and for In wars, in time of general peace, or in the field during war, requir special tuition of at least sixth months' duration, and officers of e regiment and company ought to pass through the course as a pa their requisite military study. The signal-service is an armed or ization, and often needs the disciplined use of arms. Drills with a the movement of armed bodies, and the care of troops are as cons ent a portion of the duties at Fort Whipple as at any post of the Army, and the officers ordered there need lose nothing of their military practice. It is recommended that six officers, to be selected by the Secretary of War, upon the recommendation of their regimental and departmental commanders, be detailed for instruction in the duties of the ‘field” signal-service alone, as distinguished from the full duties of that service. These officers to rejoin their commands upon the completion of the course, their places to be supplied through other details, published in advance, in the manner customary in details for artillery instruction. The time of instruction would average about six months.

The officers so to be detailed should, however, be held to be of a class distinct from those charged with the full duties of the signal-service. The full duties of the signal-service include those applicable to peace as well as to war, and to attain proficiency in them the whole time of an officer, during years of study and application, is requisite. They comprise the duties of the field signal-service above described, and also all the duties of the service in relation to the display of warning signals, giving notice in advance of storms and floods. The latter involve the study of meteoric indications, and the practice and habit of controlling the organization spread over the United States; of managing the taking, telegraphing, receipt, collocation, and publication of reports from the different stations; of deducing correct results from them, and of giving necessary warnings, by signals or otherwise, when danger threatens. The value of the officer constantly increases with the experience had in the observation of storms, the study of meteoric indications, and the correct ordering of signals. To fulfill it reliably, the employment of a selected officer, once placed upon this duty, must be permanent. Provision should be made for such permanent employment for the same reason as it is made for the permanent employment of officers of the engineers and of ordnance. It will be fatal to the service if it is attempted to perform its duty by temporary details. The detail of officers for the duties of the full signal-service, as distinguished from the field signal-service, should, therefore, be regarded as almost necessarily permanent, and it should be made with the expectation of being permanent, until such time as Congress shall provide an established organization, to prevent the accidents and imperfect working to which a temporary service is always liable. The urgent need of such legislation is again presented for the consideration of the Secretary of War.

In the last annual report mention was made of the hardship involved in the fact that the officers detailed for the duties of this service were subjected to the misconstruction, and sometimes to the injustice, of those from whose commands they are involuntarily separated. Applications are frequently pressed to bring about the relief of officers, by persons wholly ignorant of their duties, which, if successful, would seriously embarrass the execution of the work required by law. It ought not to remain possible, through neglect of legislation, that the whole machinery of the signal-service should stop in an hour, as might already have happened had not the wise discretion of the Secretary of War been exercised to prevent so great a misfortune. Justice would seem to require that a service which has existed, and with admitted good result to the United States, for now thirteen years as a temporary service, and on which officers have served continuously through details of ten years' duration, in peace and in war, living and dying in this service alone, should be held to have established a claim to permanency. With interests now depending upon its daily work as great as can by any possibility rest upon any other branch of the service, there is no but upon which it may be embarrassed, or even fatally crippled, by removal of its skillful men at the junctures at which their services most needed. The War Department, while held rigidly responsible the failures of the service, has not yet been granted the legislatio provide for its proper discharge.

Recruiting for assignment to the signal-service has been condu under the direction of the War Department, that the recruiting offi of the general recruiting service at designated stations should enlist order to this office such men, they passing the required physical exa nation, as may be presented to them by the recruiting observer- geants of the signal-service. While the popularity of the service been remarkable, its requirements are not always understood by th who apply to be enlisted. So much trouble has been occasioned to Secretary of War by recruits complaining of the military duties sidered by this office essential, that a series of circulars and instructi shown in Papers 5 and 6, and paragraph 144 of Paper 7, hereto anne have been prepared and so brought to the notice of every applicant enlistment, the recruiting sergeant, and the recruiting officer, that apprehension seems to be impossible. The recruits are divided classes, those for the "full" and those for the "field signal-servi The first mentioned are such as, in the judgment of the observer- geant, after examination by him, are fitted by education and intellig for the full duties of the signal-service, including not only the du connected with field-signals and telegraphy, but the duties of obser at stations of observation. These men are placed on duty at Whipple, Va., as private soldiers of the signal-service detachment th stationed, for at least two months, after which they have the privi on their own application, their conduct being good, of appearing be a board of officers as candidates to be placed under the tuition ne sary to be assistants to observers on stations. Passing this examina the soldier continues the course, still performing his military du until such time as he is reported by the instructor competent to b assistant. He may then be detailed on duty as an assistant to an server on station. After six months' service satisfactorily rendered such assistant, during which time he recites regularly to the obse in charge, and upon a favorable report, he may be ordered to Whipple to be placed under the additional special instruction give candidates for the grade of observer-sergeant. This additional inst tion lasts about two months, during which the candidate must serv four tours of guard duty. Upon its completion he is ordered befo board of officers convened at this office for final examination on the cial subjects of the instruction, and also before another board conve at Fort Whipple for report on his proficiency in the drill (with and w out arms) and duties of the signal service detachment, and his un standing of the military duties and responsibilities of sergeants in signal-service, this examination embracing the more essential of the ticles of War, Army Regulations, and customs of the service applica to the duties of the grade above mentioned. On passing both of th boards, the candidate, as vacancies occur, is promoted to be sergean the signal-service, but, as a rule, is obliged to serve one month at Whipple before being ordered on station, during which period, in a tion to his other duties, he takes, under the direction of the instruc such observations and makes such records and reports as may keep familiar with the duties of an observer.

Applicants who, in the judgment of the recruiting observer-serge re not fitted by education and intelligence for the full duties of the signal-service, but who are of such ability and character as to render them ualified for its field duties, *i. e.*, those of field-signals and telegraphy, s distinguished from those including the duties of observer-sergeant, re presented to the recruiting officer for enlistment to and assignment o the "field signal-service." The recruits so enlisted are not precluded rom eventual advancement to the full duties of the signal-service and romotion, in case they prove fit and worthy.

A division is also made, after enlistment, among the private soldiers, y which those of good conduct, who pass specified examinations in elementary education, military signaling and telegraphy, and the duties nd drill (with and without arms) of soldiers of the signal-service detachment, are announced as privates of the first class, and wear the pecial designation in uniform provided for them in General Orders 92, Var Department, Adjutant-General's Office, dated October 26, 1872.

The propriety of legislation which will establish, as a special grade, hat of the observer-sergeants of the signal-service, is urged upon the onsideration of the Secretary of War. Very many of these men have nlisted with the hope that Congress will, in an organization of the signal-service, improve their position. This hope ought to become a realization. The great majority of the men of this service have enlisted for t directly under the promise, authorized by the Secretary of War, that hey shall not be transferred to any other branch of the Army. They either have nor would have enlisted under the general recruiting regulations, and without the promise above referred to the work intrusted o this office could not have been done.

In this connection it is proper to add that the action of the President n the promotion of observer-sergeant Theodore Smith to a lieutenancy n the Army, for good conduct, has been highly beneficial to the service.

The systematic course by which the enlisted men are selected, drilled, xamined, instructed, tested by practice, instructed in higher branches, gain examined and again tested before being intrusted with the management of stations, has thrown much labor upon the several boards of xamination. The preliminary board, convened at this office for the examination of applicants to be placed under the first course of instruction, is composed of Bvt. Lieut. Col. Garrick Mallery, acting signal-officer and assistant, Bvt. Capt. H. W. Howgate, acting signal-officer and assistant, and Second Lieut. David J. Gibbon, acting signal-officer. This board has held a session on every Thursday during the year, nd has examined (including re-examinations) three hundred and one pplicants.

Of the civilians, whose enlistment depended upon the result of their xaminations, eighteen were accepted, a much larger number being rejected. The proportion of those already enlisted, whose examinations vere satisfactory, has exhibited the good judgment of the observer-sergeants who selected them, one hundred and twenty-one having passed he board, while but fourteen are in the list of failures, some of whom nay yet pass on another examination.

The board convened at this office for the examination of candidates or promotion to the grade of observer-sergeant is composed of Bvt. ieut. Col. Garrick Mallery, acting signal-officer and assistant; First ieut. C. E. Kilbourne, acting signal-officer and instructor at Fort Vhipple; and Bvt. Capt. H. W. Howgate, acting signal-officer and ssistant. This board meets from time to time, as the instructor at Fort Vhipple reports candidates ready for examination, and has examined during the year fifty-two candidates, of whom all but two have passe and been promoted.

The board convened at Fort Whipple for examination in the gener duties of soldiers and non-commissioned officers, and the special drill the signal-service is composed of First Lieut. George S. Grimes, Secon United States Artillery; First Lieut. C. E. Kilbourne, Second Unit States Artillery; and First Lieut. C. C. Wolcott, Third United Stat Artillery, all acting signal-officers.

The morning report of Fort Whipple for September 30 includes sixte non-commissioned officers and one hundred and thirty-one privates present. Of these, seven non-commissioned officers and thirty-sev privates are under special instruction.

The work done at this office has become of large amount, comprehen ing many details. Never ceasing for a moment, it is necessary that liefs of officers and enlisted men shall be so arranged that each sh take up his duty at a particular point and perform it in the mann prescribed. At once the greatest expedition and minuteness are quired, both of which can only be obtained by a number of perso working at the same time on different parts of the same general dut with a system of checks and counter-checks to prevent error, or at on to detect its cause and the responsibility for it. The experience th far obtained has resulted in the issue of regulations and rules for t government of the office, (Paper 8,) to which attention is invited.

Bvt. Lieut. Col. Garrick Mallery, acting signal-officer and assista has continued during the year to have charge of records, general co respondence and orders, with the superintendence of enlistments a other details specially assigned to him. The various duties in his ca have been faithfully discharged.

The correspondence of the office in its several divisions is extensiv forty-six thousand four hundred and thirty-two letters having been se and two hundred and seventeen thousand five hundred and seventy-fi received during the year, the record of which is classified in Paper The aggregate of the correspondence is two hundred and sixty-fo thousand and seven letters and documents sent and received, exclusi of publications and telegrams. The numerous requests for informati on subjects, some only indirectly connected with the duties of this offic require of themselves much attention.

The office is in communication with many foreign corresponden The following-named below in order of time are some of those who hav at their request, been regularly furnished with copies of the weath maps and bulletins, viz, Robert Scott, esq., director Meteorological Offic London, England; Professor Buys Ballot, director Meteorological I stitute of the Netherlands, Utrecht, Holland; Professor H. Mohn, direct Royal Meteorological Institute of Norway, Christiania, Norway; Capt. Hoffmeyer, director Royal Meteorological Institute of Denmark, Cope hagen, Denmark; Professor Dr. Prestel, Emden, Germany; Monsieur Ma Davy, chef de la division météorologie de l'Observatorie physique ce tral de Montsouris, Paris, France; Monsieur Harold Tarry, vice-pr ident Meteorological Society of France, Paris, France; Imperial G man Naval School at Kiel, Germany; His Majesty the King of Würte burg, Stuttgart, Germany.

First Lieut. Henry Jackson, acting signal-officer and assistant, h continued to discharge the duties of property and disbursing officer wi skill and industry. Seven thousand nine hundred and eighty-ni accounts have been examined and settled in the property division, cluding those of officers of the Army responsible for signal proper vhich number four hundred and seven. Six hundred and six instrunents have been purchased, and six hundred and twelve issued. (Paper 0.) Lieutenant Jackson has also continued the collection of statistics o complete the lists of elevations above sea-level, requisite for the accuate reduction of meteorological observations. There have been added his year sixty-three levels of lines of railroads received from railroad ngineers, seven lines of levels received from civil engineers, fourteen evels collected from other sources.

The library of the office has been increased to two thousand four hundred and seventy bound volumes, exclusive of two hundred and thirty pamphlets, and one hundred and two maps and charts. The works are elected wholly for their value to the scientific branches connected with he duties imposed upon it, and many of them have been obtained without expense to the United States through the system of exchanges estabished. Paper 11 is a list of the foreign contributions to the library.

The act of Congress approved March 3, 1873, entitled "An act making ppropriations for sundry civil expenses of the Government for the fiscal year ending June thirtieth, eighteen hundred and seventy-four, and for other purposes," contained the following proviso: "Provided that the chief signal-officer may cause to be sold any surplus maps or publications of the signal-office, the money received therefor to be applied toward defraying the expenses of the signal-service, an account of the same to be rendered in each annual report of the chief of the signal-service." This account is presented in Paper 12, being exclusively for the amounts received for the sale of maps.

Until recently, the office has not been able so far to increase the issue of its publications as to allow of any considerable surplus, nor have persons interested yet become generally aware of their privilege to obtain, at a trifling expense, the publications which before had been applied for and necessarily refused. It is believed that the above provision will lead in future to a wide distribution of meterological knowledge without expense to the United States.

Bvt. Capt. H. W. Howgate, acting signal-officer and assistant, has continued to have general charge of instruction and general supervision of the observer-sergeants and assistants to observers at stations, and of the receipt, record, and publication of the weather reports, which duties, ogether with others specially assigned to him, have been performed vith marked devotion and ability.

The following record of stations is reported by this officer:

ALPENA, MICHIGAN.

[*Official Number*, 85.]

Latitude	45° 05′
Longitude	83° 30′
Elevation of barometer above sea-level	608 feet.

The location of the office has not been changed since the date of the ast report, and Sergt. F. P. Bayes still remains in charge, having given general satisfaction by the manner in which his reports have been rendered.

The station was inspected in March, and such trifling irregularities as vere discovered by the inspector promptly corrected.

Cautionary signals are not displayed here on account of the uncertainty of telegraphic communication, although a favorable point for hem; but warnings are sent to the observer to notify the shipping whenever danger is anticipated, and these warnings have been attende with beneficial results.

The several instruments are well located. The instrument shelter ha been moved from the window to the roof of the building, and thoroughl painted.

Bulletins are not issued, as no reports from other stations are r ceived; but the regular reports are published in the weekly papers in condensed form.

AUGUSTA, GEORGIA.

[*Official Number*, 23.]

Latitude	33° 28′
Longitude	81° 54′
Elevation of barometer above sea-level	172 fee

No change has been made in the location of the office since the la report, nor is any considered necessary at present. Sergeant N. D. Lan and Private Frank Mangels, both of whom were on duty at last repor still remain, and have given satisfaction.

The station was inspected in February, and found in good conditio with the exception of some slight irregularities, which were correcte immediately, when pointed out.

The instruments are well exposed and in good condition.

The only reports received are those from the Western Gulf station which are here transferred to Washington.

During the year four hundred and eighteen bulletins of local obse vations have been furnished the press, and published, in addition to th regular monthly means of barometer and thermometer, amount of rai &c.

The afternoon Probabilities are received regularly, and printed in th newspapers on the morning of the day succeeding their issue from th central office.

BALTIMORE, MARYLAND.

[*Official Number*, 18.]

Latitude	39° 18′
Longitude	76° 38′
Elevation of barometer above sea-level	45.19 fee

No change has been made during the year in the location of the office but an additional room was furnished the observer in February free o cost, through the courtesy of the Baltimore Fire Insurance Company This room is immediately adjoining the office, and adds materially t the comfort of the observer and to the facilities for the proper discharg of his duty.

The station was inspected in February last and found in excellen condition. As the inspector reported the men overworked, another as sistant was ordered to the station March 1, and since that date tw assistants have been on duty. Sergt. H. J. Penrod still remains i charge, and has performed his duties conscientiously and satisfactoril Private Otto Schutze, the assistant at the date of the last report, an his successor, Private J. W. Craig, were both called in for promotio during the year, and passed a successful examination. Private Mar Downing was relieved for misconduct September 8, and is now a

Fort Whipple on signal duty. Privates F. Anderson and Charles Freyer are the present assistants.

Full reports have been received during the year from all stations, and urnished to the press, in addition to the usual publications in the form f bulletins and maps. Until November 22, 1872, manifold maps were ssued; but since that date printed maps have been sent from the central office, and are received for distribution by 2 p. m., daily. This change has given general satisfaction, as the morning Probabilities, printed in these maps, are received in advance of the issue of the afternoon papers containing them.

During the year twelve thousand eight hundred and eighty-seven maps and four thousand seven hundred bulletins have been issued, and ix hundred and forty-five reports furnished to the press. All the daily papers publish the Synopsis and Probabilities with regularity, and have manifested a gratifying interest in the service at all times.

The observer states that inquiries concerning the weather are made daily at the office, and that mechanics, artists, merchants, sailors, invalids, physicians and surgeons are to a greater or less extent governed by the Probabilities received from the central office in pursuing their daily avocations.

Twenty-one cautionary signals were displayed during the year, of which nine are reported by the observers as justified in the immediate vicinity of the station.

As to known benefits to commerce or other interests the observer remarks as follows:

October 24–26, 1872.—Sailing-vessels took the warning and remained in port.

March 9–10.—Some damage was done in the more exposed portions of the city to nfinished buildings.

March 15–17, 1873.—Considerable damage was done by the storm to some unfinished buildings in the more elevated portion of the city. Vessels generally remained n port during the display of the signal.

March 19–22, 1873.—Though there was no gale in Baltimore, a fierce tornado is reported from off "York Spit" at midnight of March 20, which lasted fifteen minutes.

March 24–27, 1873.—Steamers due from Norfolk were delayed by the wind three hours.

March 29–30, 1873.—Considerable damage done by the storm. No lives lost or vessels wrecked.

BOSTON, MASSACHUSETTS.

[*Official Number*, 13.]

Latitude	42° 21′
Longitude	71° 04′
Elevation of barometer above sea-level	77.4 feet

No change has been made in the location of the office since the last annual report. It is in the heart of the city, and convenient to the different newspaper and telegraph offices, while the roof from which the cautionary signals are displayed affords a good view of the greater part of the harbor.

Reports from twenty-four other stations are received here, of which number four are received from the north and transferred to New York. These reports are bulletined regularly, and furnished to the press, and manifold maps of the morning reports are also printed.

During the year three thousand four hundred and forty-two maps and four thousand one hundred and ninety-three bulletins have been issued, and two thousand and fifteen reports furnished to the press. The Synopsis and Probabilities received through the agency of the Associated

Press are regularly published by the daily papers, which also print monthly abstracts and other data furnished by the observer. The is of post-office bulletins to four hundred and three offices was commen July 15, 1873, and been continued daily, with the exception of Sund since that date. These bulletins contain the midnight Synopsis a Probabilities issued from the central office, and two copies are mailed each post-office. The total number of copies issued to date amounts sixty-two thousand and sixty-two.

Previous to this issue, the observer wrote manifold copies of t Probabilities for display in connection with the regular bulletin. these, one thousand one hundred and eighty-eight copies were made a posted.

Sergt. H. E. Cole, who was in charge of station at the date of last report, was relieved April 12, 1873, on account of ill-health, a succeeded by Sergt. E. A. Lewis, who was succeeded September by Sergt. P. G. Dietz, who is now in charge. Private Dunne w ordered in for promotion July 1, and succeeded by Private E. D. H brook, the present assistant. When the issue of post-office bullet was commenced, two additional assistants were sent there to aid in g ting them out promptly. One of these men was relieved for misc duct September 23, and his place filled by a better man. Upon t recommendation of the inspecting officer, a fourth assistant was sent the station September 29, making four now on duty.

The station was inspected in January, and again in September of t year. At the first inspection, the instruments and records were fou in excellent condition, and the observer, Sergeant Cole, highly co mended for his zeal, intelligence, and excellent habits. His relief w a source of regret to the business men with whom he held official re tions.

The full report of the September inspection has not yet been receiv but the inspector reported by telegraph the unfitness of Sergeant Lew and recommended his immediate relief.

The meteorological committee at the station, of which Mr. Thom Gaffield is chairman, has been active in rendering such assistance was called for from time to time by this office, and also in extendi courtesies to the observer on duty.

During the year thirty-four cautionary signals have been display of which number twenty are reported by the observer as justified at t station.

The observer remarks in reference to these signals, as follows:

November 29–*December* 1, 1872.—Severe storm reported along the coast.

December 26–27, 1872.—Heavy storm along the coast, and shipping all remained in p

January 5–6, 1873.—Severe storm on the coast; all shipping remained in port.

January 23–25, 1873.—Shipping remained in port. The display of this signal co mended by the press.

January 27–28, 1873.—Shipping remained in harbor. Storm severe on the coast sou of this station.

February 7–8, 1873.—Storm along the coast reported severe. Vessels going to took warning and remained in port.

February 16–17, 1873.—Shipping remained in port. Severe storm along the coast.

February 21–22, 1873.—Very severe storm; shipping remained in port. The pr commended the display of the signal.

March 10, 1873.—Short, but severe storm.

March 11–12, 1873.—Shipping remained in port. Storm severe on the coast.

March 15–17, 1873.—Southeast snow-storm, followed by very high westerly win The shipping remained in port, with the exception of the steam-yacht Grace Irvi which put to sea, after being specially warned that a danger-signal was flying, a was lost, with all on board, four or five persons.

March 29–*April* 1, 1873.—The shipping would not sail at night, but waited for da light, while the signal was displayed.

April 12-15, 1873.—Shipping remained in port during display of signal; storm long d severe.

May 2-4, 1873.—Vessels remained in port; blowing hard outside.

August 13-15, 1873.—Storm very severe outside. Many vessels staid in port, and a small boats were washed from their moorings.

The following extract from a special report, made by Sergeant Cole, on the meteorological conditions attending the great fire of Novem- r 9 and 10, 1872, is believed to possess sufficient general interest to stify its insertion here:

During the progress of the fire, the wind varied from N. N. W. to N., with a locity from five to nine miles per hour, weather being clear and pleasant and the air y, the fire breaking out shortly after 7 p. m., November 9, 1872. Between 2 and 3 a. , November 10, standing at the intersection of School and Devonshire streets, on the rth or windward side of the fire, looking south toward and at a distance of about feet from it, the indraught of air along the ground through Devonshire street ward the burning buildings assumed the character of a brisk wind, probably sixteen eighteen miles an hour, while little or no wind could be felt on School street. At s time the heat over the fire, which covered an area of probably 800 or 900 feet uare, was so great as to cause fire, smoke, &c., to be carried in spirals to a very great ght.

At a point on South street, which is on the south or lee side of the fire, and about feet from it, the induced currents, at about 3.15 a. m., were very strong, rushing rough the street toward the fire, which then probably covered over 1,000 feet square, th a velocity of probably thirty or thirty-five miles an hour, carrying the fire bodily windward.

This state of affairs appears to be the reverse of the Chicago fire, where the force of the nd prevailing at the time was sufficient to overcome the induced currents, and the fire rned to leeward. In the present case, it appeared as if the light wind permitted the in- aughts to rise at a considerable angle after reaching the fire, leaving a large space of ghly rarified air in their front, inducing stronger currents to rush in, which, meeting the draught, gave the spiral or whirlwind form to the ascending currents; and this idea is rengthened by the fact that on the outskirts of the fire the flames, when breaking rough the windows of the buildings, always tended upward, joining with the whirling ass of flames and smoke which covered that portion of the city with a fiery dome, ile the flames from those buildings more in the center or vortex of the fire formed wnward a perfect cataract of flame, destroying even the granite blocks with which streets were paved. The surface-wind generally was accelerated on all streets ding to the fire, but more especially so on the south side of it.

During the night a flock of ducks passed at a great height over the fire, and the light lected from their plumage made them appear as fire-balls passing rapidly through air. Many who marked their flight called them meteors, and likened them to the -balls said to have been seen in the Northwest during the great fires in that region.

As an example of the great heat diffused, I would state that during the night I ex- sed a thermometer in the observatory to the full glare of the fire, when it rose nearly , although placed upward of two thousand feet from the burning buildings and dead windward of them.

No other meteoric phenomena were observed, the weather remaining unchanged.

BRECKENRIDGE, MINNESOTA.

[*Official Number*, 82.]

titude	46° 16′
ngitude	96° 38′
evation of barometer above sea-level	966 feet.

The location of the office remains unchanged since last report. It is e best that can be obtained in the place, and affords good exposure for e several instruments. The building occupied is a frame one, and not ell adapted for the comfort or convenience of the observer, and it is commended that suitable provision be made before another winter to otect the observer from the inclemency of the weather. As reports e not received here from other stations, bulletins are not issued.

Sergt. C. A. Shaw remains in charge, and has rendered all reports a satisfactory manner. He reports that much interest is manifested travelers in the working of the office and the different instruments. rangers in passing through the town seldom fail to call at the office.

BUFFALO, NEW YORK.

Latitude	4
Longitude	7
Elevation of barometer above sea-level	662

No change has been made in the location of the office at this st during the year, nor is any considered necessary, as the present o in the business center of the city. Reports from fifty-five other sta are received here and published in the regular manner, in the fo maps, bulletins, and press reports. During the year five thousand hundred and one manifold maps, six thousand four hundred and sev two bulletins, and one thousand and sixty-two press reports have issued. In addition to this issue one thousand five hundred and f nine copies of the Synopsis and Probabilities were made on n fold forms and posted with the regular bulletins before July 2 which date the issue of post-office bulletins was commenced to hundred and fifty-three offices. Two copies are furnished each daily, and the total number issued to date is twenty-one thousand hundred and twenty. The leading newspapers publish the tabul reports and also the monthly abstracts, while all of them print the l Probabilities received.

The meteorological committee of the board of trade continue assist the office whenever practicable, and its members retain thei terest in the service. Sergt. William McElroy was relieved from ch of the station January 24, and reduced to the ranks for failin render his mail reports regularly. He was succeeded by Sergt. W Colesberry, who has given satisfaction by the promptness and reg ity with which all reports have been made. Privates T. A. Taylor D. O'Leary have been called in successively from this station du the year for promotion, and both passed the required examina Four assistants are now on duty, and are kept steadily employed in ting out the various publications of the office and attending to daily distribution. The station was inspected in March, and some sl irregularities discovered in the records, which were attributed t neglect of Sergeant McElroy.

The instrument-shelter was also found defective, and as soon as necessary arrangements could be made a new one was built on the of the office-building in accordance with the plan adopted by office. Twenty-seven cautionary signals have been displayed du the year, of which the observer reports thirteen fully, and s partly, justified at the station. The observer remarks as follows in erence to the result of these warnings:

October 15–16, 1872.—The cautionary caused considerable apprehension, as th rometers had fallen rapidly in the previous eight hours, and was therefore gene observed, no vessel leaving the harbor during its display.

October 30–31, 1872.—The signal caused much comment among "lake-men," qu number of vessels being ready to go out, but were detained on account of the s until the morning of the 31st.

November 7–8, 1872.—The storm very severe; all vessels remaining in port d the display. One barge, with all on board, was lost while trying to make the h in the morning.

November 13–15, 1872.—Generally observed by lake-men. Two vessels attempt leave the harbor but failed. The wind blew a gale on the lake, its velocity being third greater than that shown by the anemometer on shore.

November 27–28, 1872.—Gale very severe, but the wind being from southwes several days previous, and no vessels leaving port, only those bound in caught.

November 30–*December* 4, 1872.—These cautionaries were generally heeded. Owing
ice in the upper lake few vessels had left this port during the week. The captains
two vessels stated that they escaped danger by the display of the signal. Most
ssels are laid up for the winter.

May 7–9, 1873.—Signal heeded by mariners, no vessels leaving port during the dis-
y.

September 12–13, 1873.—No vessels left port on account of signal.

September 15–16, 1873.—Signal attracted much attention from every one. A fleet of
enty-three vessels remained in port on account of the signal, which caused much
citement and anxiety among mariners.

BURLINGTON, VERMONT.

[*Official Number*, 45.]

titude	44° 29′
ngitude	73° 15′
evation of barometer above sea-level	223 feet.

The location of this office has not been changed since last report.
o reports from other stations are received here, and, consequently, no
lletins are issued. The local observations and the monthly abstracts
e printed regularly by the several newspapers published at the station.

The Synopsis and Probabilities are received irregularly and copied by
e observer on the proper manifold form and posted with his local
ports.

The station was inspected in December, 1872, and numerous irregu-
rities found. As these appeared to have been caused by the youth
d inexperience of the observer, Sergt. George H. Ellery, he was re-
ined on duty upon the recommendation of the inspecting officer, and
nce that date his reports have been regularly and properly rendered.

The members of the meteorological committee express themselves as
sirous of doing anything in their power to promote the interests of
e service.

The records of the office have been twice used during the year as evi-
nce in legal cases.

There is no assistant on duty at this station, and as the observer's
alth had become impaired by his close attention to duty, Sergeant
ee was sent to relieve him for one month from July 1, and he was per-
itted to rest for that period.

CAIRO, ILLINOIS.

[*Official Number*, 53.]

titude	37° 00′
ngitude	89° 10′
levation of barometer above sea-level	352 .2 feet.

No change has been made in the location of the office since last re-
ort. Reports from fifteen river-stations are received and bulletined
ch afternoon when the telegraphic communication is perfect, but none
e received in the morning or at midnight.

Three hundred and ninety-eight reports of local observations have
een furnished the local press, and one thousand nine hundred and two
lletins of river reports posted in appropriate places. The river ob-
rvations have been continued daily during the year, the top of the
vee being used as the bench-mark, and the zero of gauge fixed at the
oint reached by the extreme low water of December, 1871. The range

between this point and high water of 1867, which reached the to the levee, is fifty-three feet.

The station has not been inspected since the date of last report.

Sergt. Thomas L. Watson was relieved February 18, 1873, for ne of duty, and was succeeded by Sergt. D. W. Harnett, who left the tion without authority, and was reduced to the ranks while absent. was subsequently apprehended, tried, and found guilty of deser and is now serving out his sentence for that crime. Sergt. E. Gar was ordered to succeed him, and is now at the station. His report not promptly rendered, and it is intended to relieve him unless a ch for the better is made.

Private James M. Watson was ordered in for promotion April 1, after going through the regular course at Fort Whipple passed a s factory examination, and was succeeded by Private E. F. Brady, still remains and has given satisfaction.

CAPE MAY, NEW JERSEY.

[*Official Number*, 54.]

Elevation of barometer above sea-level	14.2

The location of the office at this station remains unchanged. No ports are received here from other stations, the station being use during the last year, for observation and report and the display of tionary signals only. Owing to the present defective telegraphi rangements much delay has been experienced in the transmissi the regular reports, the midnight ones, with few exceptions, being layed until the following morning. The papers published at this sta are furnished with the local observations daily during July and Au and weekly during the rest of the year.

Sergt. T. F. Townsend remains in charge of the station, and rendered all his mail reports promptly and in good shape. The sta was inspected in January of the present year, and instruments an cords reported by the inspector in good condition.

Thirty-six cautionary signals have been displayed during the year, and of this number twenty-one are reported as justified at the tion. In reference to these signals the observer remarks as follow

> *October* 24–26, 1872.—Wind blew in heavy squalls during the afternoon and eve of the 25th.
>
> *January* 5–6, 1873.—Tornado twenty miles up the coast at 3 p. m. of the 5th.
>
> *January* 16–17, 1873.—Heavy squalls, with rain.
>
> *January* 23–25, 1873.—Wind in heavy squalls.

No signal orders can be sent to this station after 7 p. m., as the graph-office closes at that hour.

There is a great demand for the Probabilities among the guest the several hotels during the watering season, but the local papers unable to obtain them on account of the early closing of the telegr office.

The following is an extract from the semi-annual report of the server for the six months ending July 1, 1873, in reference to the i est manifested in the service at this place:

> Owing to the uniform correctness of the prognostications, public interest is la on the increase and corresponding benefits derived. The buildings in this lo

ing entirely of wood, a large amount of labor and material, particularly in paint, annually saved by the forecasts and signals.

I find also a growing confidence in the cautionary signals among sea-faring men, d a more thorough knowledge in the use of their meteorological instruments than s heretofore existed.

CHARLESTON, SOUTH CAROLINA.

[*Official Number*, 21.]

titude	32° 45′
ongitude	79° 55′
evation of barometer above sea-level	61.4 feet.

The office remains unchanged since last report. Owing to the want f proper telegraphic facilities no reports from other points are received ere at present. The monthly summaries and the local observations are gularly furnished to, and published by, the daily papers. Twelve utionary signals have been displayed at this point, six of which are ported as fully justified at the station.

The observer remarks as follows upon some of these signals:

October 23–24, 1872.—Several vessels remained in harbor on account of the signal.
March 19–20, 1873.—No vessels left port during the display.
April 1–2, 1873.—A fishing-boat upset in Ashley River, and one man drowned.

Sergt. J. E. Evans, who was in charge at the date of last report, as relieved in October, for the benefit of his health, which had become npaired by close attention to duty. He was succeeded by Sergt. M. . Hearne, who still remains, and has given satisfaction.

Privates Sidney Powell and Thomas Cleary have been called in suc- essively for promotion, and passed the required examination satisfac- orily. Private J. J. Nanry is the present assistant, and is commended y the observer for his good conduct. A lively interest in the service manifested by the merchants and other business men at this station, nd regret is expressed at the non-receipt of full reports from other oast-stations and those in the interior of the Southern States. The legraphic service, so far as the transmission of the local reports are oncerned, has been performed satisfactorily.

CHEYENNE, WYOMING TERRITORY.

[*Official Number*, 68.]

titude	41° 12′
ongitude	104° 42′
evation of barometer above sea-level	6,058 feet.

No change has been made in the location of this office since last re- ort, the present location being a very desirable one.

The reports from Santa Fé and Denver are transferred here east and est. Seven hundred and fifty-two bulletins have been issued during e year and two hundred and eight reports, together with the local ob- rvations furnished the press.

Sergt. A. C. Dobbins remains in charge, and has given general tisfaction by the promptness and regularity with which reports have een rendered. He was unable to take observations on the 7th, 8th, d 9th of May on account of sickness, and as the instructed civilian sistant had left the station, the record would have been interrupted t for the courtesy of the post surgeon at Fort D. A. Russell, who made observations at that post and furnished copies of the same to observer, thus enabling him to complete his record.

To guard against the recurrence of such accidents, Private M. Perry was ordered to the station as an assistant, May 8, 1873, and s remains. His conduct is commended by the observer.

CHICAGO, ILLINOIS.

[*Official Number*, 37.]

Latitude	41°
Longitude	87°
Elevation of barometer above sea-level	657

The office was moved June 19, 1873, to a building on the corne Madison and La Salle streets, in order to get it nearer the several t graph offices. Two rooms are occupied, giving fine facilities for work of this station, which has largely increased during the year, is still performed under some of the disadvantages resulting from disastrous fire of 1871. Full reports from seventy-five regular stati are received here, besides the special reports from the river-stati when they are made. These reports are published in the regular m ner, and during the year thirteen thousand six hundred and ninety- maps have been printed and distributed, two thousand two hund and forty bulletins issued and posted, and two hundred reports furnis to the press. The issue of post-office bulletins to seven hundred ninety-eight offices began June 17, and since that date one hundred sixty-eight thousand seven hundred and thirty-two copies have b sent out. As the matter for these bulletins is seldom received befo o'clock a. m., and the copies ready for mail must be in the post-office 5 a. m., the work is necessarily done with great rapidity, and in view these facts the accuracy and regularity with which the issue is m deserves commendation. Considerable difficulty has been experien in the receipt and transfer of reports, owing to the frequent inter tion of one or more of the telegraph lines over which they should received, and the consequent necessity of transferring them to s other office with as little loss of time as practicable, especially at n night, when every minute is of importance. The different telegra offices have to be visited regularly at report hours, and their condit ascertained, and the action of the observer governed by the informat thus received. His instructions on this subject are as follows:

When the regular Atlantic and Pacific circuit to New York is in rupted, all reports received will be sent by Pacific and Atlantic cir to Cincinnati, and the observer at that point notified that commun tion cannot be had with New York: If this latter circuit is also do the reports will be sent by the Western Union to the observer in N York, if that route is open, and when it is not, will be filed in the W ern Union Office, addressed to the Chief Signal-Officer at Washingt to be sent by any available route at the disposal of the company.

Reports for Saint Louis and Cincinnati will be sent to those poi by the Western Union whenever the regular Pacific and Atlantic cuits are broken. Reports for Milwaukee will be sent by the West Union whenever the Great Western lines to that point are down.

Some few delays have occurred from a natural reluctance on the p of operators to admit that their wires were down, and some from ot causes; but, as a whole, this part of the work has been well perforn by all parties.

The station was inspected in April of this year, and such irregul ies as were found to exist pointed out and corrected. Several changes have been made during the year in the management of the station, Sergt. Theodore Mosher being transferred to the central office January 2, 1873, and Sergt. A. C. Ford, his successor, to Nashville, Tenn., May 1, 1873.

Sergt. W. S. Kauffman has been in charge since the last-named date, and has given satisfaction by the prompt and accurate manner in which his various duties have been performed, under circumstances of unusual lifficulty.

Of the assistants who have been on duty here during the year, one, Private J. D. M. Fee) was called in for promotion, and after going hrough the usual course of instruction at Fort Whipple passed a satsfactory examination; one was called in for misconduct; one (Private H. R. Pullan) deserted; one was discharged; one transferred to another station, and one to the central office. Six regular assistants are now on duty, and kept busily employed in getting out and distributing the arge daily issue of maps and bulletins.

A lively interest is manifested in the service among all classes of citzens, and the labors of the office are properly appreciated.

Thirty-eight cautionary signals have been displayed during the year, of which twenty are reported fully justified, and two partly justified, at the station. In this connection the observer remarks as follows:

October 15–16, 1872.—Gale much more severe on the lake than at the port. Many essels remained in harbor on account of the warning; but six or seven which went out while the signal was flying were compelled to return during the night.

October 28–31, 1872.—The office was visited by twenty-eight captains of vessels and owners during the display of the signal, more than half of whom stated that they emained in port on account of the warning given.

November 4–6, 1872.—The wind blew in heavy gusts, and was more severe out on he lake. The office was visited by many captains of vessels and others interested, and many vessels remained in port on account of the warning.

November 6–8, 1872.—The wind blew in gusts and was severe on the lake. The office was visited by a number of captains, and many staid in port on account of the warnng given.

November 13–14, 1872.—Numbers of vessel-men called at the office, many of whom tated that they delayed their departure on account of the signal.

November 26–28, 1872.—This gale is represented to have been one of the most severe ver experienced on the lake. One schooner known to have delayed her departure on ccount of the warning. The office as usual was visited by numbers of seamen.

December 7–10, 1872.—But few vessels leaving port now. One schooner reported to have remained in port on account of warning.

April 3–7, 1873.—Storm of wind, snow, and rain.

April 21–23, 1873.—Propeller detained in harbor by the signal, which was justified.

September 17–18, 1873.—The wind was much heavier on the lake than at the port. Many vessels remained in, and those which attempted to go to sea were compelled to eturn. The papers make mention of numerous vessels damaged by the storm.

September 24–25, 1873.—The weather was bad, and several captains of vessels called at the office, who were detained by the signal, and with good effect, as news has been eceived of the loss of at least one vessel on the lower part of the lake.

September 26–27, 1873.—For a southwest gale and the season of the year, it is said to be unusually severe. The papers contain accounts of numerous injuries to vessels that were caught in the blow, several of which were wrecked on the east shore. A number of vessels remained in port, and probably escaped damage.

The leading newspapers publish reports regularly, and since the issue of post-office bulletins commenced have received, through the energy of he observer, the latest one sent to him from the central office in Washington.

CINCINNATI, OHIO.

[*Official Number*, 65.]

Latitude .... 39°
Longitude .... 84°
Elevation of barometer above sea-level .... 614 f

The location of the office of this station has not been changed si last report, but through the liberality of the members of the cham of commerce a second room, rendered necessary by the increas amount of work thrown upon the station, has been added and furnish at a mere nominal expense to the Government.

Reports from thirty-one other stations are received here in the mo ing, and the same number in the afternoon, with the addition of tho from the special river-stations during the spring and fall months. midnight seventy reports are received for the map, which is printed a distributed each morning by 7 o'clock a. m. Most of these reports transferred to Washington as received, which materially increases t work of the observer, who is obliged to keep himself constantly inform of the condition of the telegraph-lines in order that he may not lose va able time at the moment for action. When the regular circuits are working from any cause, the observer is instructed to transfer all ports promptly to any available line that will transmit them promp to their destination.

During the year, eighteen thousand three hundred and one maps, a seven thousand six hundred and sixty-one bulletins have been issu and two thousand three hundred and thirty-seven reports furnished the press. The issue of post-office bulletins to seven hundred a fifty-three offices was commenced April 7, 1873, and up to date two h dred and sixty-four thousand five hundred and two copies have be printed and mailed, two copies being sent to each office. As the m closes at 5 o'clock a. m., this part of the work requires to be done promp and with system. No instance has been reported where these bullet were printed too late for the mail, which speaks well for the conduct the men charged with the duty.

River observations are made regularly, and during the year one th sand eight hundred and eighty-three river-bulletins have been post on the appropriate form.

The bench-mark, from which measurements are made, is the extre low-water mark of September 15, 1858, which was twenty inches abo the bed of the river. The leading newspapers publish full tabulat reports daily in excellent form, and also the latest Probabilities receiv together with the monthly abstracts and the Weekly Weather Chronic At no other station has the press taken a livelier interest in the servi or done more to promote its usefulness.

The monthly abstracts of the weather prepared by the observer models of meteorological forms, both in appearance and contents, and is hoped they will be followed at all stations where the press is willing publish them.

Sergt. E. F. Maynard was in charge until May 16, 1873, when deserted, while under the influence of liquor, and was succeeded Sergt. Theodore Mosher, who is still in charge and has performed various duties in an unusually able and intelligent manner. He is high spoken of by the meteorological committee of the chamber of commer by the members of the press and the general business men with wh he is daily thrown in contact. Twice during the year Sergt. N. Gor

as in temporary charge on occasions when Sergeant Maynard was
nable from sickness to perform his duties. Of the assistants on duty
uring the year, one was called in for misconduct, one transferred to
ort Whipple as orderly sergeant, one, Private Edwin Booth, ordered in
r promotion, and one, Private Martin Evans, committed suicide while
mporarily absent from station on leave. At present there are six as-
stants on duty, one of whom is a sergeant, sent to relieve the observer
a portion of his responsibility. During the industrial exposition held
Cincinnati through the month of September, the morning Probabili-
es were sent from the central office to Sergeant Mosher and printed
y him daily in the exposition building, on a press kindly furnished for
e purpose by the executive committee.

A full set of standard station-instruments was also sent him for ex-
bition and excited favorable comment from the visitors and the press.

These instruments were sent to Chicago at the close of the exposition
r display there. Two extra assistants were furnished the station dur-
g the exposition, and were ordered to other points at its close.

The members of the meteorological committee of the chamber of
ommerce are entitled to the thanks of the Chief Signal-Officer for
eir uniform kindness to the observers individually, and for the public-
irited interest they have constantly manifested in the service.

The station has been twice inspected during the year, once in Novem-
er, 1872, and again in April, 1873. On both occasions it was found in
ood condition, with records neatly kept and up to date.

CLEVELAND, OHIO.

[*Official Number*, 34.]

atitude	41° 30′
ongitude	81° 47′
levation of barometer above sea-level	682.7 feet.

The office was moved April 30, 1873, upon the recommendation of the
nspecting officer, to the third story of the National Bank building, on
e corner of Water and Superior streets, where two rooms are occu-
ied, affording ample space for the station work.

The roof exposure for instruments and the display of cautionary sig-
als is an excellent one.

Reports from fifty-five other stations are received here and published
the regular manner, manifold maps being issued daily.

During the year two thousand one hundred and thirty-seven maps
nd three thousand three hundred and ninety bulletins have been issued,
nd seven hundred and two tabulated reports furnished to the press, in
ddition to a daily abstract of the local observations.

The greater part of this work was done after the relief of Sergt. J.
. Martin, March 18, 1873, as under his charge the station fell into gen-
ral disrepute and the work was grossly neglected. He was relieved
pon the recommendation of the inspecting officer and ordered to Fort
Vhipple, where, after reduction to the ranks, he was discharged the serv-
e. Sergt. L. M. Crist was transferred to the station from Roches-
er, where he had been serving creditably as an assistant, and by his
nergy and tact soon inspired new interest in the service, and by his
romptness in furnishing reports to the press secured their regular pub-
cation in tabulated form.

Becoming insubordinate he was ordered to Fort Whipple, but desert-
d before reaching that post. He was succeeded May 1 by Sergt.

Will Stromberger, who still remains in charge and has given satisf tion both to the central office and to the citizens. One assistant been transferred to the central office and one ordered in for promoti but has not yet completed the regular course of instruction at F Whipple. Private M. L. Landers, the present assistant, is commen by the observer for his good conduct.

The station has been twice inspected since the last report, once October, 1872, and again in March, 1873. At the last inspection merous grave irregularities were discovered, which led to the relief the observer as before stated.

Instruments and records are now reported to be in good condition

Twenty-five cautionary signals have been displayed during the ye of which number fourteen are reported as justified at the station.

In reference to these displays the observer remarks as follows:

October 15-16, 1872.—Several vessels left the harbor about 11 p. m. of the 15th, about 2 a. m. of the 16th encountered a severe wind and were compelled to return port to escape accident.

November 7-8, 1872.—Reports from the lake state the wind was very severe several vessels received more or less injury before they were able to reach har The display of the signal was the means of keeping many vessels in port that wo otherwise have left in the afternoon and thereby been exposed to imminent danger

November 13-14, 1872.—A heavy wind commenced about 1 a. m. of the 14th, wh from the statements of captains of vessels must have been much greater than th miles per hour. Several vessels that left the harbor contrary to the warning were c pelled to return to the harbor, where they arrived with much difficulty and narro escaped serious injury.

November 24-25, 1872.—Signal justified. No vessels are now leaving port, nav tion being about to close, and none will again leave until the opening of navigatio the spring.

November 28–*December* 1, 1872.—The wind was very severe on Lake Erie. One sel near the port is supposed to have been lost. All the vessels in the harbor are up for the winter.

April 15-18, 1873.—No damage reported. It is stated that the lake was made rough by "cat squalls." Navigation not yet opened.

September 15-16, 1873.—Several schooners remained in port because of the warn the captains of which stated that they always worked by the signal. Four schoo went out but had to put back, reaching port about midnight, the captains of wh immediately came to the office to learn the prospects.

September 17-18, 1873.—One steamer and several schooners remained in port on count of the warning.

A gratifying amount of interest is at present manifested in the vice by the members of the meteorological committee, by the press, by the citizens generally.

The editors of the several morning papers have recently effected arrangement with the Atlantic and Pacific Telegraph Company, by wh they receive regularly, in time for publication, the midnight Synop and Probabilities issued from the central office.

The office was moved temporarily on November 2, 1872, to a sm house in the upper part of the city, and on December 3, 1872, to present location on Montana street, between Sixth and Seventh stre

Sergt. S. W. Beall remains on duty and manages the station alo He has rendered all reports regularly and promptly, and in a satisf ory manner. Reports from nine other stations are received here irreg-ılarly, of which two are transferred to the Chicago circuit.

During the year three hundred and four bulletins have been issued, ınd two hundred and thirty-three reports of local observations furnished he press.

The station has not been inspected since the date of the last report, ınd the present condition of the office is therefore unknown.

DAVENPORT, IOWA.

[*Official Number*, 51.]

atitude	41° 30′
ongitude	90° 38′
levation of barometer above sea-level	603.3 feet.

No change has been made in the location of the office during the year, ıor is any considered necessary at present, as it would be difficult to find ınother possessing the same advantages.

Reports from twenty-nine regular stations are received here, and luring the spring and fall from all the special river-stations.

Three thousand four hundred and thirty-five bulletins have been ssued and ninety-three reports furnished the press. In addition to this ıumber one thousand two hundred and three river-bulletins have been ssued and furnished the press.

The gauge used for the river observations was constructed by Colonel Iacomb, United States Engineers, on the pivot on draw-bridge pier of he Government bridge, between Davenport and Rock Island. It is in he Davenport channel, and is cut in the stone-work and painted in lack and graduated into feet and tenths. Its zero-point is the low water f 1863, the lowest water known.

The station was inspected in June of this year, and the instruments nd records found in such bad condition that the observer in charge, ergt. Max Marix, was at once relieved from duty and discharged the ervice. He was succeeded by Sergt. S. P. Ruthven, June 19, since vhich date a marked improvement has been observed both in the form nd promptness with which reports are transmitted. One assistant has een transferred during the year to the central office, and one, Private . S. Collins, called in for promotion and passed the required exami-ation satisfactorily. Private B. E. Light is the present assistant, and s favorably mentioned by the observer.

The local observations, river-reports, and monthly abstracts are urnished regularly to the press and usually published.

Mr. Dalzell, the chairman of the meteorological committee, has dis-layed a marked interest in the welfare of the service, and done all that aid in his power to promote its usefulness.

The telegraphic service from this station has been of the most unsatis-actory nature, and it is to be hoped that an improvement will be made n this respect at an early date.

DENVER, COLORADO.

atitude	39° 44′
ongitude	104° 58′
levation of barometer above sea-level	5,135 feet.

The office was removed March 15, 1873, to the Woodward building, on Iolliday street, between Fifteenth and Sixteenth streets, to get a better exposure for the instruments than could be obtained at the forn location, and to get it nearer the telegraph-office, which is located in t same building. The present office is on the third floor of the buildi is 14 by 20 in size, and has two windows facing the northwest, from o of which the instrument-shelter projects. The shelter was removed fr the old office, and put up again without injury or expense to the G ernment.

The station was inspected in November, 1872, and all instruments a records found in good condition.

Sergt. Henry Fenton still remains in charge, and has forwarded mail reports with commendable promptness and in a creditable sha The morning and midnight telegraphic reports have most of the ti failed to reach the central office on time, owing to the present unsa factory telegraphic facilities. No reports are received here from ot stations, and therefore no maps or bulletins are issued.

During the year, seven hundred and eight reports of local obser tions have been furnished the press. There is no assistant at this s tion. Sergeant Fenton's experience and knowledge of the country ha been of service to the central office in the work of establishing the s tion upon Pike's Peak.

DETROIT, MICHIGAN.

[*Official Number*, 36.]

Latitude	42°
Longitude	83°
Elevation of barometer above sea-level	656.3 f

No change has been made in the location of the office since the d of last report. Reports from fifty-five other stations are received h and published in the usual manner on manifold maps and bulletins a in press reports.

During the year three thousand five hundred and nineteen maps, thousand seven hundred and fifty-eight bulletins have been issued, a seven hundred and four press reports furnished for publication. T regular issue of post-office bulletins to three hundred and thirty-sev offices was commenced July 21, since which date forty-seven thous eight hundred and fifty-four copies have been sent out.

Before the work of printing the Synopsis and Probabilities was co menced two thousand and fifty-two copies of them were manifolded a posted with the regular bulletins.

Reports from two other stations are received here for transfer to New York circuit.

The station was inspected in April, 1873, and the records and inst ments found in good condition, although the conduct of Sergt. Mann, the observer, was such that his relief was recommended by inspector and immediately ordered. Sergt. William Finn took cha of the station April 5 and still remains, having given satisfaction the manner in which his duties have been performed.

Two assistants have been relieved during the year for miscondu and one, Private Will Stromberger, called in for promotion, and pas the required examination.

Four assistants are now on duty and are all kept busy in getting the various publications of the office.

Twenty-nine cautionary signals have been displayed during the ye of which six are reported as justified at the station.

The observer remarks, in reference to these displays, as follows:

November 27–28, 1872.—The wind was gusty and boisterous, making a rough river.
November 28–30, 1872.—The wind gusty and boisterous, making a rough river.
April 30–*May* 3, 1873.—According to dispatches received from points on Lake Huron, e wind is reported to have been blowing a gale there.
May 6–9, 1873.—Newspaper reports state that there was very heavy weather, with iolent southwest wind outside of this on Lake Huron on the 7th.

The leading newspapers publish the tabulated reports more or less ally, the monthly abstracts, and the latest Probabilities received at the tation.

The interest in the service has been largely increased since the issue f the post-office bulletins brought the work of the office more directly efore the people of the State.

DUBUQUE, IOWA.

The office is located in Sullivan's block, in the business center of the ity, corner of Maine and Sixth streets. The building being higher han any of the surrounding ones, its roof affords a very good exposure or the several instruments. The instrument-shelter is of the authorized orm, facing north. The station is supplied with two full sets of the tandard instruments, all of which are reported in good condition. The tation was established by Sergt. Robert J. Bell, who began taking reglar observations on July 10, 1873.

This station is one of observation only, and no reports are forwarded o this office by telegraph, except occasional mid-day observations, in ccordance with instructions on this subject.

No reports are received here from other stations, and therefore no aps or bulletins are issued. The local observations are furnished reglarly to the press.

A river-gauge has been constructed by the observer, who is instructed o make regular daily observations, and report them by telegraph to aint Louis over the regular circuits. The gauge is located at the foot f Seventh street, and its zero point is low-water mark of October, 1864, nd is 21 feet 10 inches below the high-water mark of April 22, 1870. he average depth of water in the channel is 18 feet below low-water ark of 1864.

The station was inspected in August of the present year, and the intruments and records found in the "best possible condition."

Much interest is manifested in the service by all classes of citizens at his place, and an earnest desire is expressed for the receipt of reorts from other stations.

DU LUTH, MINNESOTA.

[*Official Number*, 40.]

atitude	46° 48′
ongitude	92° 06′
levation of barometer above sea-level	642.7 feet.

No change has been made in the location of this office during the ast year. Sergt. John Dascomb, who was in charge at the date of the last report, was transferred, on his own request, to Vicksbu Miss., October 4, 1872, and was succeeded by Sergt. R. R. Ma who still remains in charge.

The station was inspected in May of the present year, and foun a creditable condition.

Upon the interest in the service manifested by the observer, th spector remarks: "The observer's journal shows that during notable storms extra observations have been made by him, and in case hourly observations for a period of fifteen hours."

Upon the recommendation of the inspector, Private Addison Slamm sent to the station as assistant May 2, 1873, and is favorably mentio by the observer for his attention to duty.

No reports are received here, and therefore no maps or bulletins issued. The press is furnished with the monthly summaries and local observations, but the former only are published at present.

During the past year twenty five cautionary signals were displa and of this number fourteen are reported as justified at the station. following remarks are made by the observer upon incidents conne with these signals:

November 9–12, 1872.—The schooner Monitor was ready to sail, but remained twenty-four hours on account of storm-signal flying.

November 13–14, 1872.—This has been the severest storm felt here in a long Three schooners and one steamer were driven ashore, and two of the schooners wre The breakwater and the freight warehouses, docks, &c., of the Northern Pacific road Company and elevator damaged

December 12–15, 1872.—Signal justified—wind, accompanied by snow.

Considerable interest is manifested in the service by the busi community of this place, as the following extract from the obser semi-annual report for the six months ending July 1, 1873, will sho

> Judging from the increased interest manifested, the service appears to have ma rapid stride in the public favor. Very few captains of vessels leave this port wit first coming or sending to this office for information concerning the probable chara of the weather.
>
> Early in January last I was called on by the resident engineer of the Nort Pacific Railroad Company, who informed me that a regular series of meteorolo observations was about to be commenced under the auspices of that company at ous stations along the line of their road, these observations to be alike in all res with those of our service. I gave all the information and instructions necessar the work, and urged the importance of having them taken synchronously with t of the signal-service. According to this arrangement, stations were establish Brainard, Minn., and Fargo, Dak., and copies of the report furnished to the ce office.

The weekly reports from the stations referred to above have b regularly received at the central office, and form a valuable additio its records.

Elevation of barometer above sea-level	61.25

The office is located in the custom-house, in the business center of town. The bay is one square directly east of the building. The posure for roof-instruments and thermometers is as good as can be tained. The instrument-shelter projects from a window facing nort

The station was opened April 1, 1873, by Sergt. W. C. W. Shr who still remains in charge.

Private Daniel C. Murphy was ordered to this station as assistant July 22, 1873.

All reports have been forwarded promptly by mail, and the general nanagement of the station has been satisfactory.

No reports are received here, and therefore no maps or bulletins are ssued.

Ten cautionary signals have been displayed since the station was esablished, of which five are reported as justified at the station.

Much interest is taken in the service by mariners, and the observer eports two cases where captains put in from sea in passing by Eastort to ascertain whether the cautionary signal was flying or not.

The station was inspected in September, 1873, and is reported in good ondition.

ERIE, PENNSYLVANIA.

[*Official Number*, 97.]

atitude	42° 07′
ongitude	80° 03′
levation of barometer above sea-level	671.5 feet.

The office is located in a three-story brick building on the corner of tate, the principal business street of the city, and the instruments have s fair an exposure as can be obtained. The instrument-shelter is of he authorized pattern, and projects from a window of the office-room acing north. Sergt. E. F. McComas opened the station on May 25, 873, and remains in charge. Previous to August 4, 1873, no reports vere sent by telegraph to the central office, and none were received from ther stations, and therefore no maps or bulletins were issued.

Since the above-mentioned date, however, reports are received from fty-five stations, and three hundred and fifty maps and eight hundred nd five bulletins have been issued, and the local observations, together vith the bulletins, furnished the press and published regularly. On ccount of the increased work, an assistant, Private H. L. L'Eesterre, vas ordered to this station August 2, 1873. The station was inspected n August, 1873, and everything found in creditable shape. Three autionary signals have been displayed here, one of which is reported ustified at the station.

Much interest is manifested in the service at this station by members f the press and the business community.

ESCANABA, MICHIGAN.

[*Official Number*, 49.]

atitude	46° 44′
ongitude	87° 16′
levation of barometer above sea-level	601.6 feet.

The location of the office remains unchanged since last report, but the nstrument-shelter has been remodeled and built with double walls of attice-work, to guard against the effect of radiation from adjoining valls. No reports are received here from other stations, and conseuently no maps or bulletins issued, but the local observations are furnshed to the Weekly Tribune, in tabulated form, and regularly published. he station has been inspected twice since last report—once in October, 872, and again in April, 1873. At the last inspection the records and nstruments were found in excellent condition. Sergt. R. J. Bell was relieved from charge of the station on account of ill-health March 1873, and was succeeded by Sergt. J. H. Garrard, who remained u ordered in and reduced to the ranks, for neglect of duty in fail to forward his mail reports promptly. Sergt. Edward Lloyd is in charge, and has given satisfaction.

Private A. J. Berry was ordered to the station as an assistant vember 18, 1872, and still remains, having performed his duties i commendable manner. In compliance with urgent requests from citizens of the station and of ship-owners at other points on the lal it was fitted up for the display of cautionary signals soon after the inspection.

The first signal was ordered up May 18, but owing to some difficu in the telegraph line was not received at the station. Since that d three others have been ordered, one of which was reported as not ju fied at the station.

There is no meteorological committee at this station; but one of citizens, Mr. S. C. Baldwin, connected with the Chicago and Northw Railroad, has shown a marked interest in the service, and done al his power to assist the observer in making it useful.

FORT BENTON, MONTANA.

[*Official Number*, 71.]

Latitude	47°
Longitude	110°
Elevation of barometer above sea-level	2,674

No change has been made in the location of the office. As during previous year, much irregularity has again been experienced in transmission of the telegraphic reports, chiefly owing to the uncertai of telegraphic communication in so unsettled and wild a part of country. Sergt. W. F. Slater remained in charge of this station u September 15, 1873, when he was relieved by Sergt. William Mc livray. Sergeant Slater has given entire satisfaction while in cha of this station, and has rendered all mail reports with the utmost prom ness and as regularly as mail facilities would admit. A plain river ga has been constructed during the year, and the stage of the river repor in the regular afternoon telegrams.

No reports are received here, and therefore no bulletins are issued

The thanks of the office are due to the commanding officer an Captain Kirtland, Seventh United States Infantry, for assistance dered the observer.

FORT GIBSON, CHEROKEE NATION.

[*Official Number*, 93.]

Latitude	35°
Longitude	95°
Elevation of barometer above sea-level	511

The office is located in the second story of a building at the corne two streets running north and west, respectively, in the village of F Gibson. The location is the best that could be obtained, and the struments are well exposed.

The instrument-shelter projects from a window in the office, and i the authorized form.

The station was opened on the morning of April 1, 1873, by Se homas A. Taylor, and reports have been received since then with as uch regularity as the limited telegraphic facilities would admit. ome delay has been experienced in getting the mail reports from this ation, and the observer has been repeatedly reprimanded for his shortomings in this respect.

No reports are received here, and consequently no bulletins are issued. he local observations are furnished to and published by a weekly aper printed in the English and Cherokee languages.

FORT SULLY, DAKOTA.

[*Official Number*, 83.]

titude	44° 39′
ngitude	100° 40′
evation of barometer above sea-level	1687.8 feet.

The office at this station remains unchanged. Telegraphic communiation has been frequently interrupted during the year, in one instance r nearly a month, owing to the unprotected and poor condition of the ne. The telegraph-office was finally abandoned by the Northwestern elegraph Company, whose property it is, on September 5, 1873, and as not since been re-occupied. Sergt. George Prendor remained in harge until September 29, 1873, when he was relieved by Sergt. Willm Ramsay, with a view to transfer to a more important station. The ation was inspected in July of the present year and found in propet ondition. The inspector remarks in his reports: "The books and apers were found in a condition unsurpassed by no other station in eatness and accuracy, and have been so kept under exceedingly diffilt circumstances."

A river-gauge has been constructed during the year, and the stage of e water reported in the regular afternoon telegrams. The distance the river from the fort is nearly a mile and a half, and the observer marks in his semi-annual report: "The performance of this duty aking river observations) exposes the observer to a twofold danger—e rifle and arrow of the Indian, or drowning. Examples are too nuerous of the grave risks that attend a defenseless white in the thick ndergrowth on the confines of the river, and I am the only person who entures there unarmed." No reports are received here and consequently bulletins are issued.

The office is indebted to Gen. D. S. Stanley, colonel Twenty-second fantry, for continued interest and a constant effort to afford all posble facilities to the observer.

The present observer has a sufficient practical knowledge of telegphy to act as operator in addition to his other duties, and it is exected that the transmission of reports will be resumed at an early te.

GALVESTON, TEXAS.

[*Official Number*, 55.]

titude	29° 18′
ngitude	94° 33′
evation of barometer above sea-level	40.2 feet.

The location of the office remains unchanged since the date of last port. No reports are received here from other stations, and no maps bulletins issued. The local observations are furnished the newspapers, and published by them during the summer season, and the amo of rain-fall and a monthly abstract of the climatology of the stat regularly.

Sergt. E. O. C. McInerney remains in charge of the station, and performed his duties satisfactorily, and rendered all reports promp and regularly. A series of interesting experiments made by him, reference to rain-fall at different elevations, has produced unexpec results, as each weekly report has shown a greater amount of rain lected at fifty feet above the ground than at the surface, the gau used being duplicates of the standard signal-service pattern. Priva J. E. Cook and B. C. Anderson have been called in, successively, promotion, and passed the required examination. Private William Belt was transferred to the station as an assistant April 10, 1873, a died of yellow fever September 18, after a brief illness. He was a you man of excellent character and habits, and had discharged his duties a conscientious and praiseworthy manner.

In consequence of the danger to which an assistant not acclimat would be exposed at this season of the year, none will be sent to place Private Belt until later in the season, as the observer is conside fully competent to manage the station alone for a few weeks.

The chairman of the meteorological committee, and the citizens g erally, have repeatedly urged the importance to their city of havi more reports furnished them from stations to the west and north in interior of the State. They also desire to receive reports from the G stations to the eastward.

The station was inspected in March of the present year, and found good condition.

GRAND HAVEN, MICHIGAN.

[*Official Number*, 48.]

Latitude	43°
Longitude	86°
Elevation of barometer above sea-level	616.3 f

No change has been made in the location of the office during the ye No reports are received here from other stations. The local obser tions and monthly abstracts of the local weather are occasionally pu lished by the newspapers, but not with sufficient regularity to ma them of much service to the public.

The station was inspected in April of the present year and found fair condition. Several irregularities were discovered and corrected fore the inspector left.

Sergt. F. F. Wood remains in charge and is favorably mentioned the inspector in his report for his sobriety, courtesy, and general havior.

Sergt. J. H. Garrard was on duty at the station from January to March 11, 1873, during the illness of Sergeant Wood.

The midnight reports are not sent until the succeeding morning, the telegraph-office is closed at the proper time of sending. The unc tainty of the telegraphic communication also interferes seriously wi the prompt transmission of cautionary signal orders, which if sent night are frequently delayed several hours until the local telegraph-offi is opened for business the next day.

Considerable interest is manifested in the service, especially in co nection with the cautionary signals, of which thirty-six have been d

ayed during the year. Of this number twenty-eight are reported as
stified at the station.

In reference to several of these signals the observer remarks as fol-
ws:

May 12-13, 1873.—The steamer Saginaw left as usual but returned on account of
avy sea. The Chicago and Milwaukee boats are behind time on account of wind and
a.

September 17-18, 1873.—One vessel remained in port on account of signal.

September 24, 1873.—Quite a number of vessels entered the port for shelter during the
splay of the signal.

The citizens are desirous of receiving reports from the other lake-sta-
ons, but with the present telegraphic facilities it would be impractica-
le to furnish them at the proper hours.

INDIANAPOLIS, INDIANA.

[*Official Number*, 43.]

atitude	39° 47′
ongitude	86° 06′
levation of barometer above sea-level	746.7 feet.

The location of the office remains unchanged since the date of last
eport, but arrangements have been made to remove it to another part
the same building early in October, in order to obtain better facilities
nd more space. Reports from thirty-seven other stations are received
ere in the morning and afternoon, and from seventy-six stations at mid-
ight—the additional ones being copied as they pass between Cincin-
ati and Chicago. No maps are printed, but during the year four thou-
nd seven hundred and fifty-five bulletins have been issued, and one
ousand nine hundred and eighteen press reports furnished for publi-
tion.

Three hundred and twenty-seven river-bulletins and one thousand
ven hundred and thirty manifold copies of the Synopsis and Proba-
ilities have also been posted.

Sergt. C. F. R. Wappenhans remains in charge, and has given full
tisfaction. All reports have been promptly and properly rendered.

Two assistants have been relieved for misconduct during the year.
rivate W. D. Halliday, the present assistant, has been on duty since
ebruary 10, 1873, and is commended by the observer for his steadiness
nd intelligence. He was in charge of the station alone for one month
uring the observer's absence, and rendered all reports in proper form
nd time.

The leading newspapers print the local observations regularly, and
so frequent selections from the general reports and the latest Proba-
ilities received.

The observer speaks in high terms of the courtesy of the telegraph
ficials, by which he has been enabled to perform his duties under the
ost favorable circumstances.

INDIANOLA, TEXAS.

[*Official Number*, 84.]

atitude	28° 32′
ongitude	96° 30′
levation of barometer above sea-level	25 feet.

The office remains as at last report, in Schultz's building on Main street.
o reports are received here from other stations, and the station is there-
re one of observation and report only. The local observations and

monthly abstracts are furnished the only paper published here, and printed in good form.

Sergt. Edward Lloyd was in charge until March 13, 1873, w he was relieved on account of ill health and succeeded by Sergt. Fr Mansfield, who still remains.

All mail reports have been forwarded regularly and promptly, but telegraphic ones have been frequently delayed by accidents to the and the closing of the office at the regular reporting hour.

The midnight reports are uniformly held until the next day and warded with the morning report, and both are delayed even then eral hours because the telegraph-office does not open until the regu business hours of the place.

In reference to the interest taken in the service the observer rema as follows:

> I have noticed that agriculturists appreciate the service even more than the mercial community. One gentleman remarked to me that it depended wholly the signal-service whether the sugar-lands of Texas would ever be fully develope not. In other words, that these lands never could be worked to advantage wit the farmers interested had access to the weather reports.

The station has not been inspected during the year, but the obse reports all instruments and records in good condition.

JACKSONVILLE, FLORIDA.

[*Official Number*, 73.]

Latitude	30
Longitude	80
Elevation of barometer above sea-level	22.9

The location of the office remains unchanged since the date of report. Reports from five other Gulf stations are received here published in the regular matter. During the year three thousand seventy-six bulletins have been issued and four hundred and forty pr reports furnished for publication. The station was inspected in Fe ary of the present year and found in fair condition. Sergt. D. Daboll was in charge until January 2, 1873, when he was relieved account of ill health, and succeeded by Sergt. Richard McLaug who still remains and has given satisfaction. All mail-reports h been forwarded promptly and in proper form. Private W. U. Sim still remains on duty as assistant, and has given satisfaction to the server and to the central office. Considerable interest is manife in the service here, and much regret is expressed at the inability of office to furnish reports from a greater number of stations, especi during the winter, when many visitors from the North spend the sea in Jacksonville and are naturally anxious to know the state of wea at their homes. Both newspapers published at the station print al ports furnished them in excellent form. Owing to a temporary dera ment of the telegraphic facilities the midnight reports from July August 1 were not forwarded until the next morning, and during time the 9 o'clock p. m. reports were sent instead.

Four cautionary signals have been displayed during the yea which three are reported as justified at the station.

The observer makes the following remarks in reference to these plays:

> *March* 23-25, 1873.—Two schooners loaded with lumber delayed going until the was over, the captains ascribing the saving of their vessels to the display of the si
>
> *March* 25-26, 1873.—The steamer City Point waited until after the signal was ered before she left.

evation of barometer above sea-level	584 feet.

No change has been made in the location of the office since last report.
eports from twenty-nine other stations are received here with as much
gularity as the imperfect telegraphic facilities will permit, and during
e spring and fall reports from all the special river-stations are also re-
ived. One thousand seven hundred and ninety-six regular bulletins
ve been issued during the year. One thousand and ten river-bulle-
ns posted. The newspapers print selections from the river-reports,
d also that part of the Probabilities which applies to the West, but
ecline to use the tabulated reports, and manifest less interest in the
rvice than the press of any other station.

The station was inspected in June of this year, and the instruments
und in good condition. Several irregularities were found in the man-
er of keeping the records, which were corrected before the inspector
ft the station.

Sergeant Daw was relieved from charge of the station November 22,
r neglect of duty in failing to forward his mail reports promptly, and
as succeeded by Sergt. James H. Marsh, who still remains, having
ven general satisfaction.

The assistant on duty at last report was called in for promotion
pril 14, and passed a satisfactory examination after going through the
gular course of instruction at Fort Whipple.

Private Mark Foley is the present assistant, and has performed his
ty satisfactorily.

Regular observations have been made daily of the stage of water in
e river, and reported by telegraph.

The bench-mark used is at the northeast corner of Old Pilot's Indi-
tor, 1,400 feet above the bridge. The height above low water is
.183 feet, and above high water 8.95 feet. The measurement is not
ade from the bed of river.

Depth of water in channel at extreme low water 4½ feet, and at ex-
eme high water 24 feet 9 inches to 25 feet 4 inches.

Considerable interest is manifested by leading citizens in the service,
pecially by those connected with the river trade.

No change has been made in the location of the office at this station
nce last report. Reports from the West India stations are received
ere and transferred by the observer to Lake City, besides being fur-
shed to the press, with the local observations, weekly. The station
as inspected in December, 1872, and the records and instruments
und in excellent condition.. Sergt. M. J. Shanefelter was in charge
ntil February 18, 1873, when, under authority from the central office,
e exchanged stations with Sergt. William Theodovius, then at
unta Rassa. Sergeant Theodovius was in turn relieved July 7, by

Sergt. B. C. Anderson, who still remains and gives satisfaction the promptness and regularity with which his reports are rendered.

One assistant has been called in for promotion during the year, a after going through the regular course of instruction at Fort Whipp passed a satisfactory examination. Private E. K. Moore reported assistant December 23, 1872, and exchanged stations February 18, 187 with the assistant at Punta Rassa, Private M. M. Lewis, who still r mains, and has merited the commendation received from the observ for his faithful discharge of duty. He had entire charge of the stati for several weeks previous to Sergeant Anderson's arrival, and made a reports in proper form and time.

KNOXVILLE, TENNESSEE.

The office at this station still remains in the University building, a affords sufficient facilities for its station-work, although its distan from the telegraph-office is a disadvantage. No rent is paid for t office, and every facility is extended by the faculty to promote the us fulness of the service. No reports are received here from other st tions, but nine hundred and thirty-six reports of local observations ha been furnished to the press and regularly published. Sergt. John Payne remains in charge of the station, and has furnished all repor promptly and satisfactorily. He has no assistant, but gets occasion aid from the students of the university.

The midnight report is usually delayed until the succeeding day account of the closing of the telegraph-office. The station has not bee inspected during the year.

LA CROSSE, WISCONSIN.

[*Official Number*, 87.]

Latitude	43° 4
Longitude	91° 2
Elevation of barometer above sea-level	686.26 fe

This station was established October 15, 1872, by Sergt. Richa Williams, who still remains in charge and has given satisfaction.

The office is in the business center of the town, at the corner of Se ond and Main streets, convenient to all important public places. T roof exposure for instruments cannot be excelled at the station. T post-office is two squares distant, the court-house and Internation Hotel and the Mississippi River are the same distance. The telegra offices are one square distant.

The instrument-shelter is of the standard model, and projects from window in the second story.

Reports from other stations are not received here, but the local obse vations are furnished regularly to the press, and published in goo form.

The station was inspected in August of the present year, and the re ords found in poor condition. The errors were pointed out and co rected by the inspector, and the observer retained upon his recon mendation, as he appeared to have erred through ignorance alon egular river observations have been made each afternoon, and fur- ished with the usual telegraphic reports.

The zero of gauge is low-water mark of October 1, 1871, and is two et two and a half inches above the bed of the river. The gauge is tached to one of the piles of the bridge leading to North La Crosse.

Telegraphic reports were suspended from January 10 to April 4, 1873, accordance with instructions from the central office.

The inspector reports that considerable interest is felt in the service nong the citizens of the station.

LAKE CITY, FLORIDA.

[*Official Number*, 24.]

titude	30° 13′
ngitude	82° 40′
evation of barometer above sea-level	216 feet.

The location of the office at this station remains unchanged since last port. The reports of three regular stations and all of those from the est India stations are transferred here to the observer at Savan- ah.

No bulletins are published, nor any special local use made of the re- orts, and as the necessity for a station at this point no longer exists s removal to some more useful location is recommended.

The station was inspected in February of the present year, and in- ruments and records found in fair condition. The office and instru- ent-shelter needed repairing, but as there was reason to believe that e station would be broken up at an early date, it was not considered lvisable to expend any more money upon it than was absolutely ecessary, and the repairs were not made.

Sergt. James O'Dowd was in charge of the station until relieved ugust 27, 1873, on account of ill-health. He was succeeded on that ate by Sergt. A. D. Woolcott, who still remains. Both men have ven satisfaction.

Two assistants have been called in for promotion during the year and oth passed the required examination, and are now in charge of sta- ons.

One assistant was ordered in for discharge, and was succeeded by Pri- ate John A. Cody, who still remains.

But little interest is felt in the service by the inhabitants.

LEAVENWORTH, KANSAS.

[*Official Number*, 52.]

titude	39° 19′
ngitude	94″ 58′
evation of barometer above sea-level	813.38 feet.

The office has not been moved since last report, and as it is commo- ous, centrally located, and convenient to the principal business places, change is recommended.

Reports from other stations are not received here, and the only bulle- ns issued are those of the local observations, of which six hundred nd ninety-three copies have been furnished the press during the year, nd published in full by the several newspapers of the city. These apers also publish the monthly abstracts of the local weather, prepared by the observer, and also the Monthly Weather Review, ceived from the central office.

Regular river observations are made daily, and reported in the us manner. The zero of the gauge is fixed at low-water mark in the M souri, which is about one foot above the bed of the river, although t river bottom changes at each flood.

The station was inspected in July of the present year, and found good condition. Some irregularities existed in the manner of keepi the records, but they were corrected by the inspector. Sergt. Geor Boehmer, in charge at the date of last report, was transferred to t central office December 2, 1872, and succeeded by Sergt. George Rowley, who still remains, and whose mail reports have been forward with regularity. His general management of the station was favora mentioned by the inspector.

Private E. W. McGann was ordered in for promotion November 1872, and after going through the regular course of instruction at F Whipple passed a satisfactory examination, and is now in charge o station. His successor, Julius F. Beyer, was fatally injured by falli from the office-window to the pavement, while on duty, and died F ruary 8, 1873. He was a man of excellent habits and fine intelligen The present assistant is private Thomas Jones, who has been on duty that capacity since March 18, 1873.

The midnight reports from this station are not forwarded until t morning following, as the telegraph-office is closed at the regular ti for sending them.

The inspector reports that much interest is felt in the service by t citizens, and a general desire is expressed for the receipt of reports fr other stations on the western rivers and in the Territories. With t present telegraph facilities these reports cannot be furnished in a sat factory manner.

LEXINGTON, KENTUCKY.

[*Official Number*, 90.]

Latitude	38°

The station was established October 1, 1872, by Sergt. W. Jewell, who still remains in charge and has given satisfaction. T office is in one of the university buildings, and is furnished free of cost the Government. Reports are not sent by telegraph, but the seven r ular observations are made daily, and forwarded by mail at the end each week. No reports are received here. The officers of the u versity have made several urgent requests to be furnished with full ports from Cincinnati once each day, and as the station is one of struction it is recommended that the request be complied with. T observer is commended by the officers of the university for his gene good conduct, intelligence, and attention to duty.

LOUISVILLE, KENTUCKY.

[*Official Number*, 64.]

Latitude	38°
Longitude	85°
Elevation of barometer above sea-level	496 f

No change has been made in the location of the office at this stati ince last report. Reports from nineteen regular stations are received ere, and also from all the special river stations, when in operation.

During the year three thousand three hundred and eleven bulletins f the regular reports and six hundred and ninety of the river reports ave been issued, and seven hundred and fifty-nine reports furnished o the press and published in excellent form. Eight hundred and fifty anifold copies of the Synopsis and Probabilities have also been posted ith the bulletins in the most prominent public places.

The leading daily papers publish, in addition to the tabulated reports, he complete local observations, the river reports, weekly chronicle and onthly abstracts and the latest Probabilities received, and manifest n every way a gratifying interest in the welfare of the service.

The station was inspected in March of the present year, and the office, nstruments, and records found in good condition. The observer in harge, Sergt. R. E. McGrady, was favorably mentioned by the inspector for his attention to duty and courtesy in furnishing information o applicants. After the visit of the inspector, however, Sergeant McGrady began to neglect his work by failing to transmit the mail reports n time, and at length fell so far behind in this respect that he was rdered to Fort Whipple September 22, 1873, and succeeded by Sergt. esse W. Craig, who is now in charge. During the year two assistants ave been ordered in for promotion, one of whom has passed the required examination and is now in charge of a station, and the other is oing through the regular course of instruction at Fort Whipple. Private Ned Warren, the present assistant, has been on duty since July 9, 1873, and given satisfaction by the manner in which he has discharged is duties.

Regular river observations are made daily in the usual manner, the epth of water being taken from a gauge at the foot of Tenth street, hich is used by all river-men and considered reliable.

The zero of this gauge is the sill of the lock of the Louisville and Portland Canal. The bench-mark is the door-sill of house, corner of Tenth and Water streets, and is 28.1 feet above zero. Extreme high ater of February 21, 1832, is 41.8 feet above zero.

LYNCHBURGH, VIRGINIA.

[*Official Number*, 44.]

atitude	37° 30′
ongitude	79° 02′
levation of barometer above sea-level	738 feet.

The office was moved September 1, 1873, to No. 135 Main street, in he building of the First National Bank, where all instruments have a uch better exposure than previously.

Reports from other stations are not received, and therefore the only ulletins issued are those of the local observations, which are furnished egularly to the local newspapers. These papers also print the latest Probabilities received from Washington through the agency of the Southern Press Association.

The station has not been inspected since last report, and the present ondition of the office is therefore unknown, except from the reports of he observer, who states that all instruments are in perfect order.

Sergt. S. B. Murray was relieved from charge of the station January 9, 1873, for neglect of duty in not forwarding his mail reports on time. He was succeeded by Sergt. H. U. Jones, who still remai and has been especially prompt in rendering all reports.

There is no assistant at the station, nor is any considered necessa at present, as the work of the observer is limited to making the sev daily observations and recording them.

In reference to the interest manifested by the citizens in the servic the observer remarks as follows in his report for the six months endi June 30, 1873:

> Lynchburgh being one of the greatest tobacco-markets in the United States, and t greatest manufacturing city, receives undoubtedly the most positive and definite amou of benefit from the system of weather reports of any city in the Union that is situat in the interior. The manufacturers, after a long and patient comparison of t Probabilities and the weather which actually occurs, have arrived at the conclusi that for practical purposes the Probabilities are "certainties," and make their rangements about placing tobacco in the open air in accordance therewith, and th are unanimous in their declarations of appreciable good derived directly from the s nal-service reports in enabling them to prevent a great loss of labor and material.

MARQUETTE, MICHIGAN.

[*Official Number*, 50.]

Latitude	46°
Longitude	87°
Elevation of barometer above sea-level	666.33 fe

The office remains at the corner of Spring and Front streets, in t business center of the town, and within one square of the lake, t telegraph-office, and the most important public houses. The location a good one for the exposure of the instruments. No reports are receiv here, the station being for observation and report and for the display cautionary signals only.

The local observations are furnished regularly to the Mining Journa the only paper published at the station. This paper also prints week abstracts of the local weather. The station was inspected in May of t present year, and records and instruments found in good condition.

Sergt. W. H. Clendenon remains in charge, and has rendered all ports promptly and satisfactorily. The inspector reports that he spoken of in very warm terms of commendation by citizens with who he has official relations. Arrangements were made for the display of ca tionary signals as soon as the telegraphic communication could be lied upon to transmit them promptly; and the first signal was order September 26, 1873. Previous to that date several warnings had be sent to the observer whenever danger was anticipated.

There is no assistant at the station. Since the date of last report t telegraphic communication has been greatly improved, and the repor transmitted with greater regularity.

MEMPHIS, TENNESSEE.

[*Official Number*, 62.]

Latitude	35°
Longitude	90°
Elevation of barometer above sea-level	299 fe

No change has been made in the location of the office since last repo

Reports from nineteen regular stations are received here, and al those from the special river-stations when made. During the year, tv thousand nine hundred and seventy-two tabulated and one thousan five hundred and seventy-seven river-bulletins have been issued, a our hundred and sixty-five press reports furnished for publication. ne thousand and fifty-six manifold copies of the Synopsis and Probbilities were made and posted with the bulletins previous to August 5, on which date the printed issue to post-offices was commenced. ifty-nine offices are supplied with two copies each daily, the total numer issued to date being three thousand seven hundred and seventy-six.

The station was inspected in March of the present year, and reported 1 excellent condition.

Sergt. S. W. Rhode remains in charge, and has rendered all reports romptly and in proper form. His semi-annual reports are especially vell prepared.

Privates John D. Sumet and James T. Clements are on duty as assistnts, and are both favorably mentioned by the observer for their good onduct and faithful attention to duty. One assistant (Private A. G. 'assin) has been ordered in for promotion during the year, but, receivng a commission as second lieutenant in the Army before completing is course of instruction at Fort Whipple, was not examined.

The following extracts from the semi-annual report of the observer or the period ending June 30, 1873, will give a fair idea of the interest nanifested in the service:

> As to the use made of the reports received at this station, I have to report that I am ften called upon by the railroad and express companies to know the condition of the 'eather. These companies are often sued for damages to goods from being exposed to ne rain and sudden changes in the temperature. It is a very important matter to nem to know the condition of the weather while these goods were in their charge. I ave always been able to furnish the information these parties desired, the Weekly 'eather Chronicle being very useful in this connection. One brickmaker stated to e that he had often saved as high as two and three hundred dollars a day by giving ose attention to, and heeding the warnings given in, the Probabilities.
>
> The increase of the river-reports was highly commended by the river-men, and this ovement by the Department in their behalf has been duly appreciated by every one onnected with the river. The planters along the river also give close attention to the ver-reports, as they can now have several days' warning of an overflow.
>
> The cotton-factors of this city also manifest considerable interest, and this office is isited almost daily by cotton-men, desiring information as to the amount of rain-fall, mperature, &c., in the cotton States. The river-men have been very profuse in their ncomiums, as the river-reports of the service have been of great value to their interts. The additional river-station shave been very valuable to them, and there is no oubt but that, by the present system, an immense amount of property can be saved the planters in the Lower Mississippi Valley. The service has gained a fast hold on e people of this city, and there are certain portions of the public that have saved so uch by heeding its warnings that they would not know what to do without it.

Regular river observations are made at this station and reported in e usual manner. The gauge used is one constructed by the United tates Engineer Corps, as stated in the last annual report.

MILWAUKEE, WISCONSIN.

[*Official Number*, 38.]

atitude	43° 03
ongitude	87° 54′
levation of barometer above sea level	661.4 feet.

The office was removed in April to an adjoining room in the same uilding, but, while centrally located, labors under the disadvantage of eing imperfectly heated during the winter months. Efforts will be ade to remedy this defect before the cold weather renders the office ncomfortable.

Reports from fifty-seven stations are received here, of which seven are transferred to Chicago in addition to their publication at the station the usual manner.

During the year one thousand eight hundred and fifty-three ma and three thousand five hundred and sixty bulletins have been issue and four hundred and fifty-five press-reports furnished for public tion.

Eight hundred and forty-nine manifold copies of the Synopsis a Probabilities have also been made and posted with the bulletins in t most prominent public places.

The station was inspected in April of the present year, and t records and instruments found in good condition.

Sergt. D. H. Sackett was relieved March 20, 1873, on account of personal difficulty with the telegraph-operators, in which he does n appear to have been the most at fault. He was succeeded by Serg H. M. Ludwig, who still remains in charge and has given full satisfa tion by the able manner in which he has discharged his duties.

One assistant has been transferred to the central office during t year. His successor, Private A. Dunhauser, was ordered there Ap 1, 1873, and still remains. His conduct has been favorably mention by the observer.

Thirty-six cautionary signals have been displayed during the year, which twenty-four are reported as justified at the station.

In reference to these displays the observer remarks as follows:

> *October* 15–16, 1872.—High northerly winds prevailed on the lake, and vessels p back to port and remained until the signal was lowered.
>
> *October* 29–31, 1872.—Sailing-vessels remained in port; steamers went out, but turned and remained in port until the gale abated.
>
> *November* 7, 1872.—Heavy gale on the lake.
>
> *November* 13–14, 1872.—Vessels that were out put back to port and waited until t signal was lowered.
>
> *November* 25, 1872.—The vessels remained in port.
>
> *November* 28–30, 1872.—Vessels remained in port. The majority are laid up for t winter.
>
> *November* 30–*December* 2, 1872.—Wind, accompanied by snow. One vessel disobey the signal and went out, but met with a heavy sea which compelled her to put back port.
>
> *December* 2–3, 1872.—No vessels going out; all laid up for the winter.
>
> *April* 7–10, 1873.—No sailing-vessels left port. No casualties reported.
>
> *September* 17–18, 1873.—Very few departures during the display of the signal, a damage to shipping reported. A rough sea experienced by Milwaukee-bound vesse
>
> *September* 24–25, 1873.—Vessels remained in port until the wind veered to the sout west, of which several took advantage and cleared. The bark Unadilla lost her mi zen-topmast by rough weather on Lake Michigan on Wednesday, and the schooner J. Whaling foundered at Grand Haven and is a total loss.
>
> *September* 26–27, 1873.—Vessels remained in port during the continuance of sout east wind and cleared with the southwest.

The leading newspapers print the tabulated reports, the weekly a monthly abstracts, and the latest Probabilities received up to the tim of going to press. The inspector reports that the citizens display marked interest in the service. In reference to this subject the observ remarks:

> Farmers and visitors from the surrounding country, whom I frequently meet, speak with the highest praise of the benefits derived from the reports, and especial the Probabilities, which have been unusually correct for this region. Numerous vess owners and others interested in shipping study the Probabilities for anticipat changes in the direction of the wind, and accordingly regulate their vessels for ea departure or otherwise, as the case may be. Cautionary signals, when up, are a closely watched, and cases have come under my personal notice where vessels delay their departure during the display of the signals.

MOBILE, ALABAMA.

[*Official Number*, 27.]

Latitude	30° 42′
Longitude	88° 11′
Elevation of barometer above sea-level	41 feet

No change has been made in the location of the office at this station since the date of last report. No reports from other stations are received here, but during the year one thousand seven hundred and twenty-three bulletins and one thousand four hundred and sixty-six press-reports of local observations have been issued by the observer, in addition to five hundred and forty-seven manifold copies of the Synopsis and Probabilities made and posted with the bulletins. The station was inspected in February of the present year, and instruments and records found in good condition.

Sergt. D. O'Donoghue remains in charge, and has given entire satisfaction. All reports have been rendered promptly and in excellent form. Two assistants have been called in for promotion during the year, one of whom has passed the required examination, and the other is still under instruction. Private C. A. Smith is the present assistant, and is commended by the observer for his attention to duty.

Thirteen cautionary signals were ordered during the year, of which five are reported as justified at the station. Several of these signals were delayed in transmission until their time of usefulness had passed.

In reference to the display of April 1, 1873, the observer remarks: "A few vessels not taking warning were driven from their moorings."

The inspector reports that the citizens are very much interested in the service, and are anxious to have reports from other stations.

The secretary of the cotton-exchange made a most earnest request through him, that the cotton-exchange be furnished with reports from the cotton States during the cotton-growing season at least. He states that these reports are of the utmost value to cotton-merchants, as they show the actual state of the weather at the points where stations are located, and upon this data the business men rely in a great measure in making their calculations as to the probable value of the crop.

MONTGOMERY, ALABAMA.

[*Official Number*, 26.]

Latitude	32° 22′
Longitude	86° 23′
Elevation of barometer above sea-level	249.9 feet.

The office at this station remains at 49 Market street, in the business portion of the city. It was inspected in February of the present year, and found in a fair condition. Upon the recommendation of the inspector, the instrument-shelter has been remodeled and painted, to procure a better exposure for the instruments. It is also intended to remove the office to a more suitable building, but as yet none has been found.

Sergt. George A. Clum remains in charge, and has forwarded his reports promptly and in good shape; and as no reports are received here from other stations, he has been without an assistant until September 11, 1873, when the station was made one of the southern centers for the distribution of the daily Synopsis and Probabilities to post-offices, and Private H. E. Armstrong, a printer, ordered here as assistant.

Commencing September 20, 1873, the midnight Synopsis and Proba ities are received by telegraph and are printed, and two copies mailed daily to forty-five post-offices.

The press has been furnished with and published the daily local servations and the monthly summaries.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Official Number*, 46.]

Latitude	40° 16′
Longitude	71° 16′
Elevation of barometer above sea-level	6285.4

The office at this station was located during last winter in the de of the Mount Washington Railway Company, on the summit, and d ing the summer was moved from one building to another, belonging the same company, until it was finally settled permanently, in Septe ber, in a comfortable and roomy house built for this especial purpo at the expense of the central office, by Mr. Walter Aiken, to whom office is indebted for many courtesies shown the observers, and for va able assistance rendered on many occasions. The station was inspec in December, 1872, and an officer is now on his way to make anot inspection. The station was found in excellent condition when l visited, all instruments and records being in good working ord and the men comfortably situated. Sergt. A. R. Thornett remains charge, and has given entire satisfaction by the regularity, neatness, a promptness with which all of his reports have been forwarded. He sent most of his own telegraph reports during the year, having learn to operate with sufficient skill. Sergt. William Line also remains the station, and is warmly commended by the observer in charge for ability and zealous attention to duty. Private William Ramsay w ordered in for promotion July 1, 1873, and, after the usual instructi passed his examination, and is now in charge of a station. An ex assistant was sent to the station during the time the special obser tions were made, of which a separate report has already been submitt to you. He was recalled August 4, 1873, and succeeded by Private De Rosher, who performs his duties satisfactorily. A great amount extra labor was thrown upon Sergeant Thornett in connection with t establishment of the special stations on the side of the mountain, a he is entitled to praise for the faithful and intelligent manner in whi he performed it.

The following estimate of provisions required for the supply of thr persons for eight months is given as the result of the observer's perience, and as a guide for future occupants of the station:

3	barrels flour.	1	barrel ship-bread.
1	bushel corn-meal.	1	barrel plate-beef.
5	dozen 3-pound cans tomatoes.	5	dozen 2-pound cans corn.
8	dozen 1-pound cans milk.	2	dozen 3-pound cans beef.
45	pounds Java coffee.	1	barrel white sugar.
1	pound mustard.	1	pound pepper.
25	pounds baking-powder.	1	keg standard sirup.
1	keg vinegar.	2	boxes raisins.
3	kits mackerel.	60	pounds corn-starch.
250	pounds fresh beef.	25	bushels potatoes.
2	barrels onions.	3	gallons English pickles.
60	pounds butter.	50	pounds ham.
6	pounds tea.	25	pounds rice.
1	box table-salt.	3	boxes herrings.
50	pounds dried apples.	50	pounds dried peaches.
2	bushels beans.	3	bars castile soap.
10	bars extra soap.	150	pounds fresh pork.
1¼	pounds assorted spices.		

A few cans jelly, chickens, &c., for use in case of sickness; some obacco, and a few herbs, such as sage, &c. Some unknown ladies have indly given the observer about one hundred volumes of the latest novls and other interesting publications, to amuse the men on station durng their long and dreary winter isolation. It is to be regretted that he names of the generous donors are unknown, in order that their houghtful kindness might be suitably acknowledged.

As in previous years the thanks of the office are due to Mr. Walter iken and Capt. J. W. Dodge, of the Mount Washington Railroad Comany, and to Mr. Benjamin Kilburn, of Littleton, for their continued ssistance in many ways.

The line has been kept in good repair from base to summit during he year, and the interruptions that have occurred in communication ave been caused at points beyond the control of the observer.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Base.*]

levation of barometer above sea-level.................................. 2,898.3 feet.

This station was opened May 1, and observations made regularly ntil June 30, 1873, in connection with the summit and other stations. detailed report of their observations has been already submitted. ergt. Robert Seyboth was in charge of the station, and had two asistants. All the men were faithful in the discharge of their duties, nd the full records were brought to the central office in excellent shape nd condition. One of the assistants (Private William Seely) was tally injured, June 28, by falling from the railway trestle-work, and ied at Littleton, to which place he had been removed for medical reatment.

He was an honest and faithful man, and his loss was greatly deplored y his comrades. A full account of the accident will be found in the ournal of Sergeant Seyboth for June 28, 1873, given in the special reort already referred to.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Station No.* 2.]

levation of barometer above sea-level.................................. 5,553.3 feet.

This station was opened by Sergt Edward Lloyd, assisted by rivates A. L. Bowie and G. H. Crane, June 1, and discontinued June 0, 1873.

It was located in a railway-car, furnished through the courtesy of the ailway company, and which answered the purpose admirably, except uring the prevalence of high winds, when it was shaken so violently hat the mercury in the barometer oscillated far beyond its normal ange, and caused the discrepancies that will be occasionally noticed in he readings of this station. All the records were brought in to the entral office in good shape, and will be found in the detailed report of hese special observations.

MOUNT WASHINGTON, NEW HAMPSHIRE.

[*Station No.* 3.]

Elevation of barometer above sea-level	991.23

The office at this station was located on the second floor of the W Virginia University building until August 1, 1873, when a more su ble and convenient office on the third floor was kindly provided by president of the university. The roof instruments are well expos the instrument-shelter is of the authorized pattern, and projects fro window facing 26° east of north.

The office is furnished by the university free of cost.

Sergt. Charles R. Daw opened the station January 28, 1873, but lecting his work he was relieved for neglect of duty and reduced to ranks. Sergt. Thomas L. Watson succeeded him in charge of the sta April 22, 1873.

This man also failed to attend to his work properly, and upon the mendation of the inspecting officer, who visited the station in August the present year and found it in a neglected condition, was at once ieved and reduced to the ranks. Sergt. J. D. M. Fee took charge gust 25, 1873, and still remains and gives satisfaction.

This station being one of observation only, no reports are sent by egraph, except occasional mid-day barometrical reports, and since ay 3, 1873, also one report of the stage of the water at 3 p. m. daily. The river-gauge used at this station rests upon the bed of the river, d the reports, consequently, indicate the exact depth of water in the annel.

No reports are received here from other points, and consequently no aps or bulletins are issued. The monthly summaries are furnished to d published by the Morgantown Post, a weekly paper.

The station is highly valued by all the officers of the university, and ere are reasons to believe that the present observer will extend his here of usefulness.

The office is indebted to Dr. Alexander Martin, the president of the iversity, for valuable aid rendered in connection with the station.

NASHVILLE, TENNESSEE.

[*Official Number*, 63.]

titude	36° 11′
ngitude	86° 53′
vation of barometer above sea-level	504 feet.

No change has been made in the location of the office at this station ce the date of last report, nor is any considered necessary, as it is in e business center of the city, and within easy reach of the telegraph- ices. Reports from nineteen regular stations are received here, besides those made from the special river-stations. During the year, three ousand three hundred and seventy-two tabulated bulletins and one ousand and seventy-three river-bulletins have been issued, and two ndred and eight reports furnished on the regular form to the press for blication. The full local observations have also been constantly given the press, in addition to a daily abstract of the weather at the several ations from which reports are received.

This abstract is prepared by the observer, and has been received with rked favor. This station having been selected as one of the centers distribution for the Synopsis and Probabilities to post-offices, the reg- ar issue to ninety-six offices commenced September 4, 1873, and has en continued regularly since that date. The station was inspected in arch of the present year, and found in excellent condition. Sergt. W. Kauffman was in charge at the time, and the inspector commended n in warm terms for intelligence and zeal. He was transferred May 1873, to Chicago, and Sergt. A. C. Ford from that station took his ace. The duties have been well and faithfully performed by Sergeant rd.

Two assistants have been called in for promotion during the year, th of whom passed the required examination after going through the ual course of instruction at Fort Whipple.

Privates Stansell and O'Brien are the present assistants, the latter ing a printer, sent to assist in getting out the post-office bulletins. th men are favorably reported upon by the observer for their atten- n to duty. The citizens manifest a gratifying interest in the service, pecially that part of it connected with the river-reports. The observer has been called upon several times to furnish the records of his offic evidence in lawsuits of importance.

Regular river observations are made at this station, and reported the usual manner. The river-gauge remains on the southern face of northern draw-pier of the Louisville and Nashville Railroad bridge, a the zero of the gauge corresponds to extreme low water in the Cu berland River. Referring to these reports, the observer remarks as lows in his journal for June, 1873:

> In conversation with the president of the board of trade and other business me the city, the observer learned that the river-reports of the signal-service were doi great deal of good with the shippers of the place. A conversation had with the se tary of the board, and a large tobacco-dealer, is submitted entire.
>
> *Question by observer.* Do you think that the weather-reports of the signal-service of any local or immediate benefit to this community?
>
> *Answer.* O, yes, a very great benefit; for instance, I am in the tobacco business tensively, and to me the river-reports are particularly valuable, and so to others in pursuits. If we want to ship freight by water, we can tell before it leaves whethe can go through or not, without reshipping, knowing the draught of the boat on wh we load and the stage of water in the rivers we intend to run her in; nothing is eas This, too, makes a difference in insurance rates in favor of the shipper, the compa charging higher rates if the cargo is to be reshipped, for they say, "we don't k what kind of a boat you will transfer to," and the risk is greater.
>
> *Observer.* Have the Probabilities ever attracted your attention?
>
> *Answer.* I watch them like a hawk. I have also a farm about three miles from city, and have utilized these predictions in carrying on my farm. I cut hay, plant c harvest, &c., when the indications are favorable by the reports.

NEW LONDON, CONNECTICUT.

Longitude	72°
Elevation of barometer above sea-level	24.6

No change has as yet been made in the location of the office, bu removal to a more suitable building is in contemplation.

Sergt. C. E. Brinsmade, who was in charge at the date of last port, was relieved and reduced to the ranks on December 2, 1872, absenting himself from the station without leave. He was succeeded Sergt. Timothy O'Neill, who still remains in charge and has rende his reports in good shape and given satisfaction.

Private Mark Foley, who was on duty at the date of last report, ordered in for promotion January 21, 1873, and was succeeded by Priv C. J. Costello, who remains, and is reported attentive to duty at prese although inclined to show himself indifferent when first ordered here

Reports are received here from twenty-four other stations, and dur the year two thousand nine hundred and thirty-four bulletins and thousand and ninety-two copies of the Synopsis and Probabilities ha been posted, and one hundred and fifty-one reports furnished press.

Thirty-nine cautionary signals have been displayed during the ye twenty-seven of which are reported as justified at the station.

The following are some extracts from the observer's remarks upon cidents connected therewith:

> *January* 5–7, 1873.—No damage to vessels, all remaining in port except one, wh sailed about an hour before the signal was hoisted, and returned on the 7th disma and rigging all gone.
>
> *February* 7–8, 1873.—No injury to vessels, all remaining in port.
>
> *March* 10–11, 1873.—No injury to vessels, all having taken shelter in port when cautionary signal was hoisted.

The interest manifested in the service at this station remains baated.

NEW ORLEANS, LOUISIANA.

[*Official Number*, 28.]

atitude	29° 58′
ongitude	90° 07′
levation of barometer above sea-level	55.81 feet.

The only change made in the office at this station since last report has een its removal to another room on the same floor, which did not affect ne elevation of the instruments. Reports from twenty-one regular sta- ons are received here, in addition to those from all the special river- tations. The reports from Shreveport, Indianola, and Galveston are ransferred to Cincinnati as received.

Five thousand five hundred and seventy-three regular, and three ousand four hundred and fifty-one river-bulletins have been issued uring the year. Thirty post-offices have been regularly supplied with ne printed midnight Synopsis and Probabilities since September 15, 873.

The leading papers print the river-reports, the monthly abstracts of ocal weather and the latest Probabilities received through the agency f the Associated Press, with occasional selections from the tabulated eports. The station was inspected in February of the present year nd the office found in a very unclean and disorderly condition. The nstruments and records were in good order, however, and all reports ad been properly made, and the unfurnished state of the office-room ppeared to be the principal cause of the disorder noted. The observer as not recalled. Since the removal of the office no complaint has been ade.

Sergt. Frank Mansfield was in charge until March 7, 1873, when he as transferred to Indianola, and succeeded by Sergt. Nelson Gorom, ho still remains, and has given satisfaction by the promptness and egularity with which all reports have been rendered.

Private D. C. Ralston, the assistant at last report, was ordered in for romotion March 14, 1873, and passed a satisfactory examination after oing through the regular course of instruction. Three assistants are ow on duty at the station, one of whom is a printer, charged with the sue of post-office bulletins. Two of them are favorably reported upon y the observer, but the third man has only been on this station a few ays, and his capacity is therefore unknown.

Regular river-observations are made here and reported in the usual anner. The gauge used is one put up by the city engineer as stated last year's report.

The bench-mark is high-water mark of 1871, (and is marked on the ty tide-gauge,) at which the zero of gauge (from which all river-measure- ents are made) is placed. From this point to the bottom of the river approximately 178 feet. The zero is 15 feet above sea-level and 10.5 et below the city datum-line.

Merchants and others interested in shipping take a lively interest in ne reports, and express an earnest desire to have more of them than e received at present, especially from the cotton-growing States.

Twelve cautionary signals have been displayed here during the year, which five are reported as justified at the station.

NEW YORK CITY.

[*Official Number*, 15.]

Latitude	40° 42′
Longitude	74° 00′
Elevation of barometer above sea-level	165.60

The only change made in the office at this station during the year
been its removal to two rooms on a lower floor of the Equitable bu
ing. These rooms are the same size as those previously occupied,
are more easily reached. Reports from all stations are received h
and are transferred to the several circuits over which they are distri
ted. The transfer requires prompt action and correct judgment on
part of the observer, especially when—as frequently happens—som
the telegraph lines are broken. This duty has been performed by
in a generally satisfactory manner. During the year forty-one thous
six hundred and thirty-six maps, containing the full midnight repo
have been printed and ready for distribution by daybreak daily, and
thousand nine hundred and seventy-seven bulletins have been issue
the regular manner. The issue of printed copies of the Synopsis
Probabilities to six hundred and seven offices was commenced Febru
25, 1873, and since that date two hundred and thirty-eight thous
four hundred and twenty-eight copies have been sent. These bullet
must be in the post-office by 5 o'clock a. m., daily, and the promptn
and regularity with which they have been delivered shows the duty
have been well performed by all engaged upon it. The station was
spected in January of the present year and found in good conditi
Sergt. C. R. Estabrook remains in charge, and has given entire sa
faction by his management of the station. Sergt. M. F. Tighe
remains as the senior assistant, and is highly commended by the ob
ver for his close attention to duty. There are four other assistants
duty, of whom two are printers, and all are worked to their full capac
in getting off the large daily issue of publications. An additio
printer is furnished by the Equitable Insurance Company to assist
getting out the maps, and that company also furnishes a messenger
distribute a portion of them. All the present assistants are favora
mentioned by the observer. One man was relieved during the year
misconduct at this station and one for discharge.

Thirty-nine cautionary signals have been displayed here during
year, of which twenty are reported as fully, and one partly, justified
the station. Much complaint is made by sailors of the want of b
liancy of the signal-light, which is not distinguishable from the bay,
is therefore practically useless. Arrangements are making to sup
the station with a conspicuous light that will be easily visible at a
tance of three miles or more.

In reference to the display of signals the observer remarks as follo

January 5–6, 1873.—Owing to the signals having become loaded with ice, thus end
gering the safety of the people in the streets below, they were loosened at 3 p. m.,
again raised at sunset.

January 23–24, 1873.—Three coasting vessels known to have remained in the ha
on account of the warning.

February 7–8, 1873.—A large number of lighters were observed to seek safe positi
in the harbor in advance of the gale.

NORFOLK, VIRGINIA.

Longitude	76°
Elevation of barometer above sea-level	55.52

The location of the office remains unchanged. Sergt. James E. agruder, who was in charge at the date of last report, was relieved ebruary 18, 1873, for misconduct, and subsequently discharged the rvice. His successor, Sergt. E. W. McGann, remains in charge, id has given entire satisfaction. The station was inspected in Feb- iary of the present year, and upon the recommendation of the inspect- g officer the above-mentioned change in the observers was made.

Private E. B. Robbins, who was on duty here as assistant at the date last report, was called in for promotion and succeeded by Private . T. Carvalho, who still remains, and has also given satisfaction.

No reports have been received here during the present year, and no aps and bulletins are issued. The leading dailies, however, publish ie monthly summaries and the Probabilities. Thirty cautionary signals ave been displayed, and thirteen are reported fully justified and six artly so.

The observer remarks as follows on some of these signals:

October 23–26, 1872.—No injury known to have resulted to commercial or other inter- ts. The rain-fall during the storm amounted to 7.47 inches.

March 3–5, 1873.—No vessels left port during the display of the signal. Many were ixious to leave, but did not do so until two hours after the signal was lowered.

March 11, 1873.—No vessels left port during the display of the signal.

March 15–17, 1873.—No injury known to have been done.

March 18–19, 1873.—No injury known to have been done to shipping.

March 19–22, 1873.—A heavy gale which lasted one hour, during which considerable image was done to several vessels in port. One life was lost by a schooner being rown on her beam-ends. A number of vessels remained in port until the signal was wered.

April 16–17, 1873.—No vessels left port. One steamer, the N. P. Banks, attempted to ave but was compelled to put back.

April 22–24, 1873.—A heavy sea outside. Ten vessels remained in the roads until the gnal was lowered.

September 19–20, 1873.—No boats left during the display of the signal. The steamer . P. Banks, attempting to leave port, was compelled to put back on account of high a.

NEW HAVEN, CONNECTICUT.

[*Official Number*, 96.]

atitude	41° 17′
ongitude	72° 57′
levation of barometer above sea-level	107.1 feet.

The office is located in the upper story of the new insurance building, 38 Chapel street, a six-story structure, and affords an excellent expo- ire for all the instruments. It stands in the business center of the city, id is within a short distance of the post and telegraph offices. The istrument-shelter is of the authorized form, and projects from a window cing north.

The roof-instruments are located on the tower-deck, at an elevation one hundred and twenty-seven feet above the curb. In the center of ie deck stands the flag-staff for the display of cautionary signals, and om its height (one hundred and fifty-seven feet above the ground) can e easily seen from all parts of the harbor.

The rent paid for this office is $18 per month, and the thanks of the ffice are due to the members of the New Haven Chamber of Commerce r their valuable aid rendered this office in procuring so favorable a cation.

Sergt. William Black opened the station on December 10, 1872. It eing one of observation and for the display of cautionary signals ily, no reports are sent to the central office by telegraph, except occasional mid-day reports, in accordance with instructions on this su ject. The regular number of daily observations are, however, ma here, and transmitted weekly by mail. They have all been render promptly and in good shape.

The station was inspected in January of the present year, and report in good condition.

No reports being received here, there are no bulletins or maps issue and the local observations and monthly summaries only are furnished and published by the press.

The first cautionary signal was displayed on March 8, 1873, and seve teen have been ordered since, eleven of which have been reported justified at the station, and two partly so.

The following are some extracts from the observer's remarks up these signals:

> *March* 24–27, 1873.—The signal was justified, and gave general satisfaction by t prediction, so far in advance, of the two consecutive days' rain, sleet, &c., and t subsequent northwesterly gale. Several instances of benefit reported.
>
> *April* 16–18, 1873.—One schooner heeded the signal, and avoided rough weather.

Much interest is manifested in the service by the shipping interes of the place and vicinity, and frequent applications have been receiv from these quarters for telegraphic-reports from other points.

The observer also makes the following remarks in his semi-annu report for July 1, 1873:

> The press-reports furnished by the central office are published in excellent form, a held in high esteem. The telegraph-operators are required to hold open at night, af the hours of regular business, in order to get the latest Probabilities for publication the morning newspapers. One editor reports that the country circulation of his pap has been greatly increased during the past spring by the accuracy of the publish weather information.

NORTH POLAR EXPEDITION.

Sergt. Frederick Meyer, the observer sent with this expeditic returned to Washington early in June of the present year witho records or instruments, having lost everything at the time of his sep ration from the vessel, as described in his special report already su mitted. He was fortunate, however, in retaining note-books containi important topographical data, which have enabled him to chart t Arctic regions to a point farther north than any before reached by e plorers.

OMAHA, NEBRASKA.

[*Official Number*, 67.]

Latitude	41°
Longitude	96°
Elevation of barometer above sea-level	1,045.69 fe

The office was removed November 29, 1872, to the corner of Thirteen and Farnam streets, where it still remains. It is centrally located a convenient to all the principal public places, and the roof exposure f instruments is as good as can be obtained in the city. The instrumen shelter is of the standard pattern and projects from a window facing t north. Reports from nine other stations are received here irregular and furnished to the press. During the year five thousand one hundr and eighty-eight bulletins have been issued. The monthly abstracts a published regularly by the local papers, and also by several papers the interior. The station was inspected in the latter part of July of th year and found in such a disorganized condition that the observer was mmediately relieved and, upon the recommendation of the inspector, reduced to the ranks and his place filled August 13, 1873, by Sergt. Thomas Cleary, who has rendered all reports promptly and in proper orm. One assistant has been ordered in for promotion during the year nd passed the usual examination in a satisfactory manner. Private ohn McCann is the present assistant, and has performed his duties aithfully while on the station.

Regular river observations are made daily and reported in the usual manner. The gauge used is attached to a pier of the Union Pacific Railroad bridge and its zero is the low-water mark of 1867. The high-water mark of the same year is 19 feet above zero of gauge.

OSWEGO, NEW YORK.

[*Official Number*, 31.]

atitude	42° 28′
ongitude	76° 35′
levation of barometer above sea-level	299 feet

No change has been made in the location of the office at this station ince its establishment, nor is any considered necessary. Reports from fty-five stations are received here and published in the usual manner.

During the year, two thousand seven hundred and three maps and hree thousand two hundred and twelve bulletins have been issued, and ive hundred and eighty press-reports furnished for publication, in addition to the full local observations.

The station was inspected in February of the present year, and found n excellent condition. Sergt. B. F. Hough remains in charge, and as forwarded all reports promptly and satisfactorily. The inspector eports that he is "an extremely zealous, energetic, courteous, and ffective man."

The self-registering wind-vane, constructed by the observer and eferred to in the last annual report, continues to work satisfactorily.

Two assistants have been called in, successively, from this station uring the year for promotion, and after receiving the usual instruction passed their examination. Private E. Bird is the present assistant, nd gives satisfaction.

Twenty-three cautionary signals have been displayed, of which eleven re reported as justified at the station. In reference to these signals, he observer remarks as follows:

November 7–8, 1872.—A number of vessels were kept in the harbor by the display of he signal, and were benefited thereby.

November 13–15, 1873.—Many vessels remained in port that would otherwise have een caught out, had it not been for the display of the cautionary signal—this I learn rom officers of vessels.

November 27–28, 1872.—No damage reported.

November 29–*December* 1, 1872.—No injury is known to have resulted to commercial nterests.

The two daily newspapers at the station publish selections from the abulated reports, all the local observations, the monthly abstracts of he local weather and the latest Probabilities received.

A permanent interest in the service is manifested by the leading citiens. In reference to this subject, the observer remarks as follows:

The citizens manifested the usual amount of interest in the weather reports. Those ost interested are the contractors, builders, shipping and commercial men, though he mariners, as a class, have derived the greatest benefits. I have the names of some who have told me that, by means of the weather-reports and information obtained from this office, they have made one or two trips more than other vessels sailing fr the same port. At the close of navigation last fall, when the insurance rates w high, captains and owners of vessels visited the office, watching their chance to s without insuring cargo or vessel. One man in particular, the owner of a propell came regularly for two or three days, and made his trip to Hamilton, Ontario, witho insuring, which was a saving to him of $350.

PEMBINA, DAKOTA.

[*Official Number*, 86.]

Latitude	49°
Longitude	97°
Elevation of barometer above sea-level	790 fe

The office is located in [illegible]e-story building, about two hundred yar from Fort Pembina. The instrument-shelter projects from a north wi dow and is of the authorized pattern. There being a scarcity of hous in this country, the location is the best obtainable. Sergt. Alfr Brimer opened this station, but was subsequently discharged the ser ice, and was succeeded by Sergt. George McDonald, who commenc taking observations November 1, 1872. This man proved to be of inte perate habits and neglected his work, and a request was subsequent sent to the commanding officer at Fort Pembina to place him und arrest and prefer charges against him for drunkenness and neglect duty. This was done and he was tried before a general court-marti convened at Fort Pembina, and by the sentence of the court dishon ably discharged the service of the United States May 14, 1873. examination of the records shows that he had failed to take seven o servations in December, 1872, and forty-four in January, 1873.

Sergt. Sidney Powell was ordered to this station January 30, 187 and Sergeant McDonald being in confinement, and the new observ taken ill shortly after his arrival, there were one hundred and fifty-thr observations missed during the following month before he recovered.

The station was inspected in May of the present year and found in fair condition. No reports are received here, and consequently no ma or bulletins are issued.

Much irregularity has been experienced in the transmission of repo by telegraph on account of the unprotected and exposed condition the line. The office is indebted to Lieut. John Bannister, Twentie Infantry, who has acted as telegraph-operator, while stationed at Fo Pembina, for valuable assistance rendered the observer. Upon t recommendation of the inspector, the office was furnished with a co plete set of telegraph-instruments to enable the observer to send h reports himself in case of emergency. There is no assistant at th station, and none is considered necessary.

PHILADELPHIA, PENNSYLVANIA.

[*Official Number*, 17.]

Latitude	39°
Longitude	75°
Elevation of barometer above sea-level	71.12 fe

No change has been made in the location of the office since the da of last report, but through the courtesy of the officers of the chamb of commerce an additional room has been furnished free of expense the Government, which adds greatly to the comfort of the observe and to the facilities for performing their work.

A serious objection to the present office consists in the want of prop eans of heating the rooms during that portion of the day when it is not cupied for business purposes, as there are no facilities for putting up stove in any one of the office-rooms. Unless this difficulty is overcome fore the approach of cold weather, it will be necessary to remove to me more favorable locality.

Reports from all stations are received and published here in the usual anner. The maps issued are printed from the midnight reports and e ready for distribution by daylight.

The members of the meteorological committee of the chamber of mmerce assist in distributing the maps, and a wider circulation is ereby given them than could be attained by the force of the office one.

During the year twenty-four thousand two hundred and sixty-seven aps and five thousand six hundred and seventy-nine regular bulletins ve been issued.

Two hundred and eighty-one press-reports and one hundred and eight ver-bulletins have been furnished for publication, and one thousand d twenty-four manifold copies of the Synopsis and Probabilities sted with the bulletins.

The station was inspected in January of the present year and found good condition so far as the instruments and records were concerned.

Sergt. W. T. Boyd remains in charge, and has performed all his duties an unusually able and intelligent manner, and bears an excellent putation among the business men with whom he has official relations.

Eight assistants have been relieved in succession from this station ring the year, three of whom were ordered in for promotion, four for isconduct, and one transferred to another station. There are three sistants now on duty, and all are worked to their full capacity, and e commended by the observer for attention to duty.

In reference to the interest taken in the service the observer remarks follows in his semi-annual report for the period ending June 30, 73:

> It is unnecessary to say very much on this subject. The service speaks for itself. advancement and continued progress in the well-wishes of all our prominent busis men is a well-known fact. As a prominent member of the board of trade rerked: "Stop this service for one month and its necessity would become so apparent the public interests that any favor they might ask Congress would gladly grant." ny instances might be given where there have been large sums of money at stake, d difficult questions have arisen which have been solved by the signal-service. For nt of time I will mention but one. A vessel, with cargo fully insured in this city, e lost in a storm at sea, about half way between New York and New London, Conn., ne time in July, 1872. The owners claimed the insurance for the full amount, vessel d cargo. Some doubt seems to have arisen about the affair, and more especially as the wind and weather in that locality at the time the loss occurred. Mr. Steelman, retary of the vessel-owners' association, called at the observer's office for informan as to the state of weather, velocity and direction of wind at New York and New ndon at midnight of July 24, 1872. This happened at the time the reports were susnded, and no data could be furnished by this office. The observer addressed a comnication to the observers in New York and New London, and the reports, as received m those stations, were taken as evidence in court, and the case was decided in favor the insurance company, who proved that on the night in question there was only resh wind and clear weather at both of those stations, and it was very improbable a storm to have occurred at so short a distance from the land at that time. It was certained afterward that the vessel was scuttled and sunk purposely to get the large urance. This is but one of the many cases which might be cited.

PIKE'S PEAK, COLORADO.

[*Official Number*, 99.]

titude	38° 48′
ngitude	104° 59′
evation of summit above sea-level	14,216 feet.

Sergt. George Boehmer was ordered to this station July 21, 1 to make the necessary arrangements for its establishment. As se teen miles of telegraph-line had to be built, and the same amoun road made, to render the summit accessible before a shelter coul erected, considerable delay has necessarily occurred in getting read work. It is expected, however, that regular observations will be m from and after October 11, 1873. Four assistants are on duty, on whom is a sergeant, and who, with one other assistant, will remai the base to forward supplies to the party on the summit. An office been rented at Colorado Springs for the use of the lower party, w can be made available as a station, should observation be desired in future from this point.

PITTSBURGH, PENNSYLVANIA.

[*Official Number*, 41.]

Latitude	40

No change has been made in the location of the office since last re-
rt, but one is ordered as soon as suitable arrangements can be made
r removal. This change is made in accordance with the recommenda-
on of the inspecting officer, who visited the station in September of
e present year.

No reports are received here, and therefore the only bulletins issued
e those of the local observations, of which one thousand nine hun-
ed and seventy-three copies have been furnished to the press. The
ading newspapers also print the monthly abstracts of the local weather
d the latest Probabilities received up to the hour of going topress.

Sergt. A. B. Williams remains in charge of the station, and has
ndered all reports properly and promptly. One assistant has been
dered in and promoted during the year, after passing the usual exam-
ation. Private Charles Dill, the present assistant, has given satisfac-
on by his intelligence and attention to duty. Several errors in the
anner of keeping the records were discovered by the inspector, and
rrected under his supervision. A general desire is expressed by the
tizens to have reports from other stations sent here as in previous
ars.

Thirty-six cautionary signals have been displayed during the year, of
hich twenty-five are reported as justified at the station. The observer
akes the following remarks in reference to several of the signals:

November 7, 1872.—Boats in the harbor that had prepared to sail remained in, as the
rm was quite violent at sea.

November 29–30, 1872.—The display of the signal was a benefit, as those vessels which
re prepared to sail remained inside the harbor; those that were out came in consid-
bly damaged and knocked to pieces.

December 9–10, 1872.—Quite a storm reported outside the harbor, doing considerable
mage.

December 26–27, 1872.—The signal was hoisted several hours before the storm, afford-
sufficient time to make preparations, and no vessels left the harbor.

January 5–6, 1873.—Signal hoisted four hours before the commencement of gale, giv-
timely warning for vessels to prepare and remain in.

January 23–25, 1873.—Not much damage sustained by vessels, on account of the
nely warning.

January 27–28, 1873.—From inquiry made, no vessels sustained injury in this port.

February 7–8, 1873.—No known damage sustained at this port.

March 15–17, 1873.—The gale broke the top off of the pole for the display of caution-
y signals.

March 29, *April* 1, 1873.—By timely warning not a vessel left the harbor for their
stination.

April 22–15, 1873.—Vessels all remained in the harbor; gale accompanied by heavy
ow.

May 3–4, 1873.—Vessels all put into the harbor and remained.

August 14–15, 1873.—Gale light from the northeast at this station, but a heavy swell
ming in from sea.

The office still remains in the eighth story of Powers' Block, at
corner of State and Maine streets, one of the best locations in the

Reports from fifty-five other stations are received here and publis
in the usual manner. During the year two thousand six hundred

ty-two manifold maps and five thousand and seventy-four bulletins e been issued, and eight hundred and fifty-nine press-reports furued for publication. One thousand two hundred and eighty-eight uifold copies of the Synopsis and Probabilities have also been posted h the bulletins.

he three daily newspapers printed at the station publish regularly latest Synopsis and Probabilities received, the Weekly Chronicle, ithly abstracts, tabulated press-reports, and also a daily local item ng a general summary of the weather at Rochester for the preceding nty-four hours. Great interest has been displayed by the newspaper os in the workings of the service.

'he station was inspected in March of the present year and found in ellent condition. Sergt. F. M. M. Beall remains in charge, and given entire satisfaction in his management. The inspector reports y favorably upon his zeal, attention to duty, promptness, and court- . He has recently commenced drawing the isobaric lines upon his uifold maps, and has been very accurate in his work in this and other pects. Private L. M. Crist was on duty as assistant until March 18, 3, when he was promoted and assigned to the Cleveland station. He succeeded by Private H. M. Wells, who still remains and is favor- y mentioned by the observer for steadiness and good conduct. Ser- nt Beall was permitted to leave the station for one month from Au- t 4, and during his absence Sergt. George Onslow was in charge, ing been sent from Fort Whipple for that purpose.

'wenty-four cautionary signals have been displayed during the year, which thirteen are reported as fully, and three as partly justified, at station. In reference to the results of these signals the observer arks as follows:

tober 16, 1872.—The storm was severe on the lake between 9 a. m. and 2 p. m. No el left port during "signal up," and none were observed out.

vember 7–8, 1872.—No vessel left port during the display. The wind attained a city of thirty-five miles an hour, and from its variable force was dangerous. Many ons have mentioned their appreciation and use of the warning. The daily papers he 8th instant make mention of its perfect reliability.

vember 25–26, 1872.—The highest wind of the season. No vessels are known to been out in the storm; navigation about closed.

vember 27–28, 1872.—The velocity of the wind reached thirty-eight miles per hour, was steady.

vember 29–*December* 1, 1872.—Signal hoisted thirty-five hours before the storm hed the station. The storm followed, with low temperature, and was the most gerous of the fall, the wind moving in fierce, sudden gusts, full of snow. The Erie al frozen up, and impassable to boats.

cember 1–4, 1872.—The wind was steady, at twenty-eight miles an hour. No ves- entered or left the harbor; navigation about closed.

cember 8–11, 1872.—The wind was very variable, accompanied by a light, fine, ing snow-storm.

cember 13–16, 1872.—This signal closes a successful season of display, and they are ended with a satisfactory increase of confidence in the ability of the service to e reliable storm-forecasts.

ay 1–3, 1873.—Am informed by builders, shippers, and others, that a warning for xtensive rain is of as great value to their interests as a display for dangerous ds—the signal was, therefore, justified, as a cold, driving rain followed.

ay 7–9, 1873.—It (the signal) had the usual effect of causing those whose business rests were affected by high winds and rain to prepare for the same. The commu- in general appear to have a settled and unquestioned dependence upon the signals

'he inspector reports that a general desire is expressed in Rochester ave the signals repeated at Charlotte, seven miles distant, and on e Ontario, at the mouth of the Genessee River. The attention of Chief Signal-Officer is respectfully invited to this subject.

itude	32° 05′
gitude	81° 08′
vation of barometer above sea-level	71 feet.

No change has been made in the location of the office since the date the last annual report.

'he only reports received here are those from the West Indies and rida stations, and are furnished regularly with the local observa- ns for publication.

'he station was inspected in February of the present year, and the truments and records found in good condition.

'he office itself needed some repairs, which have since been made.

Sergt. J. O. Manson is still in charge, and has given entire satisfac- n.

All reports have been made promptly and properly by mail, and those telegraph as regularly as the telegraphic facilities would permit.

Private McGillivray was ordered in for promotion June 3, and passed e required examination satisfactorily. He was succeeded by Private rmann Frey, who is still on duty, and is favorably mentioned by the server.

Twelve cautionary signals have been displayed during the year, of ich four are reported as fully and two partly justified at the station. reference to these signals the observer remarks:

ctober 23–24, 1872.—The wind blew steadily most of the day of the 23d, with some ts in the afternoon. Several vessels were detained by the signal. From informa- n received it appears that a severe gale was experienced along the immediate coast.

farch 23–25, 1873.—The success that the department has attained as to accuracy in playing cautionary signals begins to inspire in the breast of the mariner in port pect for the science which, on many an occasion during the last year, has indirectly ed numbers of vessels from destruction.

farch 25–26, 1873.—No vessels left port during the display of this and the previous nal.

pril 1–2, 1873.—The wind attained a velocity of thirty-six miles an hour. No injury ulted. Many persons doubted the verification of this signal, as the weather was very asant and clear at the time of hoisting.

eptember 19–20, 1873.—The wind reached a velocity of forty-eight miles an hour, with outheast direction until 8 p. m. of the 19th, when it changed to west and then to thwest. No vessels left port during the day, and much uneasiness was felt by ties in vessels that left before the display of the signal was made.

No change has been made in the location of the office since the of last report. No reports are received here and no bulletins iss except those of the local observations, which have been regularly nished the press.

The station was inspected in March of the present year, and foun excellent condition.

Sergt. Hugh Coyle was in charge until his death from yellow fe September 28, 1873, since which date the work has been done by Pri John G. Lynch. Sergeant Coyle was one of the most faithful me the service, and an earnest and conscientious worker. All his rep were forwarded promptly, and in perfect order. Two assistants h been called in successively for promotion during the year, one of wh is now reviewing his course of instructions, and the other has been lieved from duty in this division of the service for misconduct. Pri Lynch, the present assistant, has discharged his duties intelligently well, and is now in sole charge of the station.

River-observations are made and reported here in the usual man the gauge used being one constructed by the observer, under the di tion of this office.

The reference point in reporting depth of river is in the bed of ri and 40 feet below high water of 1849, and 25 feet above bottom of ri From bottom of river to high-water mark of 1849 is 65 feet.

Considerable interest is taken in the service here, especially in part of it connected with the river-reports.

SAINT LOUIS, MISSOURI.

[*Official Number*, 66.]

Latitude	38° 37
Longitude	90° 15
Elevation of barometer above sea-level	543.54

The office was removed March 1, 1873, to the building of the S Louis Mutual Life Insurance Company, at the corner of Sixth Locusts streets, where it now remains.

The officers of the insurance company and the members of the Ch ber of Commerce have contributed liberally to the equipment of station, and are entitled to the thanks of the office for their act The present office is reported to be more convenient and better equip than that of any other station. Reports from twenty-nine other stat are received here in the morning, with more or less regularity. In afternoon the same reports are received, with the addition of those f all the special river-stations, and at midnight the number of reg reports is increased to seventy-six, from which a map is prepa printed in time for distribution by daylight each morning, includ Sunday.

During the year, fifty-three thousand one hundred and eighty m sixteen thousand six hundred and eighty-six regular, and six thous and thirty-eight river bulletins have been issued, and three thous and ninety-four press-reports furnished for publication. The stat was made one of the centers of distribution for the printed Synopsis Probabilities to post-offices, and on September 1, 1873, the issue commenced to four hundred and fifty-five offices, two copies being nished to each. The station was inspected in June of the present y and the instruments, records, and office found in excellent conditio

Sergt. E. H. Singleton remains in charge, although it is prop transfer him to a larger field of duty at an early date. He has dis- yed unusual intelligence and ability in the manner in which he has scharged his duties and extended the usefulness of the service at this tion, and he is commended to the especial attention of the Chief Sig- l-Officer. The inspector refers to him in the following strong terms approval:

> have inspected every important station in the country, excepting Cincinnati, and sider the Saint Louis office the best managed of any, and that the interests of the vice have been advanced more by the work of this station than of any other single .

Four assistants have been relieved from duty at this station during e year for misconduct, two transferred to other stations, and one led in for promotion, who subsequently passed the required exami- tion. Seven assistants are now on duty, of whom one is a sergeant, . O. Bailey,) sent to relieve the observer of a portion of his responsi- ity. All these men are worked to their full capacity, as the record work shows, and all are favorably mentioned for general good con- ct.

Through the agency of Sergeant Singleton, the police force of the city s been enlisted in the meterological service to the extent of making ily reports on forms furnished from the central office, and which have en proved of value in working up the local meteorology of the station. e chief of police has shown a commendable degree of public spirit in lering this work done.

Arrangements have been made also by the observer for a wide distri- tion of the reports through the agency of the several railroad lines ding into Saint Louis, the nature of which is fully explained in the lowing statement of the observer:

> t the last session of the State Board of Agriculture, held in this city, your observer s invited by that body to appear before them and explain in what manner the re- ts could be best utilized. With this request I complied, and I also suggested means ereby the farmers of Missouri and surrounding States could be put in possession of ormation sent daily from Washington, which would be of great value to them; the n being simply to interest the railroad management in the matter, and to induce m to transmit the daily weather-reports over the wires gratis. From want of per and concerted action upon the part of the various agricultural associations, the tter was left in abeyance until April last, when your observer, after consulting with eral prominent railroad officials, determined to address a letter to the respective road presidents, briefly pointing out the advantages to be derived by furnishing ir employés information as to the probable state of the weather. This letter met the robation of the gentlemen addressed, and its provisions were immediately carried effect, the operators at all telegraph stations being instructed to post a copy of the patch sent them in a conspicuous place in their office, and at large stations, where ers are published, duplicate copies were to be made on forms furnished by this ce, that those papers might avail themselves of them. In addition to this work, the gage-masters of morning trains were ordered to leave at each station, upon arrival, vious to 5 p. m., one of the daily weather-maps.
>
> he Saint Louis, Rockford and Rock Island Railroad was the first to put this plan operation; the action of this road was quickly followed by the Saint Louis, Vanda- and Indianapolis, the Cairo Short Line, the Saint Louis, Kansas City and Northern, Chicago and Alton, the Saint Louis and Iron Mountain, and the Saint Louis and theastern; and thus the reports are distributed over a very large extent of country.

The press of this station has shown a marked degree of interest in the velopment of the service, and have published full reports in fine shape, d assisted the observer in many ways.

Mr. George H. Plant, chairman of the meteorological committee of e Chamber of Commerce, has also manifested a lively interest in the rvice.

River-observations are made here, and reported in the usual manner, d are received with great favor by the parties engaged in the river- ade.

SAINT PAUL, MINNESOTA.

[*Official Number*, 39.]

Latitude	44° 53′
Longitude	93° 05′
Elevation of barometer above sea-level	794.53 feet.

The office still remains at the corner of Third and Market streets, and is favorably located. Reports from six northwestern stations are received here for transfer to Milwaukee and for local publication. The reports from all the principal river-stations are also sent here during the seasons of high and low water in the Mississippi, and of these five hundred and twenty-nine bulletins have been issued.

The local observations have been furnished to the press regularly and are published, together with the latest Probabilities received. The station was inspected in May of the present year and found in very bad condition, and the immediate relief of both observer and assistant was found necessary.

Sergt. C. W. Held was relieved for neglect of duty, May 15, 1873, and subsequently reduced to the ranks upon the recommendation of the inspector. He was succeeded by Sergt. H. E. Cole, who still remains, and has given entire satisfaction by the promptness and regularity with which he has forwarded all reports and the very neat manner in which they are made out. Two assistants have been relieved in succession during the year, one of whom deserted before reaching Fort Whipple.

Private James A. Barwick, the present assistant, has been on duty here since July 17, 1873, and been faithful and attentive.

Regular river observations are made and reported daily in the usual manner. The bench-mark is at the pier of the bridge, and is marked at extreme low water of 1864. The daily report of river is the depth of water above that mark. The depth of water in the channel at extreme low water is 1 foot 11 inches. There is no reliable high-water mark.

ISLAND OF SAINT PAUL'S, ALEUTIAN ISLANDS.

Latitude	57° 02′
Longitude	170° 00′
Elevation of barometer above sea-level	Unknown.

Reports have been received from the observer at this station for the period from June 5, 1872, to May 31, 1873, as shown in the special report already submitted. Private Charles P. Fish remains on duty, and his reports show that he has carried out his instructions in an intelligent and faithful manner.

SPRINGFIELD, MASSACHUSETTS.

This is not a reporting station, but was established July 19, 1873, for the distribution of printed copies of the midnight Synopsis and Probabilities to such post-offices as could be reached daily by 3 o'clock p. m. Private John G. Murray has worked the station alone, and given full satisfaction. He began work on the 28th of July, and supplies seventy-one offices daily. The office is in the Republican building, and in every way a desirable one.

TOLEDO, OHIO.

[*Official Number*, 35.]

Latitude	41° 40′
Longitude	83° 32′
Elevation of barometer above sea-level	649.5 feet.

The office is located in the fifth story of the chamber of commerce lding, at the corner of Madison and Summit streets, in the business ter of the city, within convenient reach of the telegraph-offices and various public buildings. An excellent exposure is afforded by the f for the several instruments and the display of cautionary signals. e instrument-shelter is of the standard pattern, and projects from vindow on the northeastern side of the building. The location of s shelter is not a good one, but is the best attainable at present. ports from fifty-five stations are received here and published in the ial manner. During the year two thousand and ninety-eight manifold ps and three thousand seven hundred and six bulletins have been ied, and one hundred and fifty-five reports furnished to the press. In lition to this, nine hundred and eighty-two manifold copies of the iopsis and Probabilities have been posted with the bulletins.

The station has been twice inspected during the year—once in Octo-, 1872, and again in March of the present year. It was found in condition at both inspections. Sergt. A. C. Ford was relieved iuary 2, 1873, and transferred to the Chicago station, and was sucded by Sergeant J. E. Cook, who still remains in charge and has warded all reports promptly and properly. The inspector commends for his zeal and general good conduct. The record of work done, en above, shows that he has displayed a commendable energy in ting his reports before the public. Two assistants have been called uccessively for promotion, and both have passed the required examiion.

Private William McElroy is the present assistant, and has been on y in that capacity since April 14. The observer speaks in warm ms of his attention to duty and capacity. The leading newspapers lish the tabulated reports from a selected number of stations, the nthly abstracts of local weather and latest probabilities received. ively interest is manifested in the service among the citizens, and office is visited daily by parties in search of meteorological informa. Twenty-seven cautionary signals have been displayed during the r, of which seventeen are reported as justified at the station.

The observer remarks, in reference to these displays, as follows:

ctober 29–31, 1872.—Several persons made application for information, and a number essels detained in the harbor on account of the signal.

ovember 13–14, 1873.—Several vessels remained in port, and the masters of them le inquiries at the office, and expressed their entire satisfaction at the result of the ning.

ay 6–9, 1873.—The schooner Minnie Powell left port on the morning of the 6th, sprung a leak soon after getting into the lake, and was towed back some distance sank. Amount of damage unknown.

VICKSBURGH, MISSISSIPPI.

evation of barometer above sea-level	30.7 feet.

No change has been made in the location of the office since the date last report. No reports are received here from other stations, and e only bulletins issued are those of the local observations, which are rnished regularly to the daily newspapers, and printed with the latest obabilities received.

The station has not been inspected since July, 1872, but the observer ports the records and instruments in good condition. Sergt. Robert yboth was transferred to the central office April 10, 1873, and suceded by Sergt. Otto Schutze, who is now in charge, and has rendered l reports promptly and in excellent form.

Two assistants have been relieved during the year for misconduct, and ie called in for promotion, who passed the usual examination. The esent assistant is J. C. Senger, who has been on duty since August , 1873, and given satisfaction.

Twenty cautionary signals have been displayed here during the year, which thirteen are reported as fully, and four as partly, justified at ie station. The observer makes the following remarks in reference to iese displays:

October 23–25, 1872.—The gale having been signaled sixteen hours in advance, the ipping in port were prepared for it, consequently no damage was done.

November 29–30, 1872.—No damage or injury reported.

February 27–28, 1873.—No injury to vessels reported.

March 2–4, 1873.—No vessels left port during the display, although several intended to do so on Sunday and Monday. An unusually severe storm is reported to hav vailed on Sunday afternoon on the North Carolina coast.

March 19–21, 1873.—No vessel left port during the display of signal, and no da is reported.

March 23–27, 1873.—No damage done to the shipping in port, and no vessel le harbor during the display of the signal.

March 28–30, 1873.—Three large foreign vessels were about to sail on Friday n but remained in port on account of the cautionary signal. No damage done in p

April 9–10, 1873.—A Norwegian brig and the schooner John went to sea befor signal was hoisted; both vessels, becoming unmanagable before they were out o channel, collided heavily and were badly damaged.

September 19–20, 1873.—The signal was heeded by mariners, merchants, and the lic. One of the most violent storms known for a number of years prevailed here 1.30 a. m. to 5 a. m. of the 20th, the wind attaining a velocity of forty-eight mil hour. Trees were torn up by the roots, chimneys and fences blown down, and trees that heretofore had battled successfully with rude Boreas were compelled t in obedience to his mighty power. North of the city the storm was even more se destroying barns and out-houses, killing and crippling numbers of cattle, th coming down in torrents all the while.

WOOD'S HOLE, MASSACHUSETTS.

[*Official Number*, 60.]

Latitude	41
Longitude	70
Elevation of barometer above sea-level	25

This station was opened December 4, 1872, by Sergt. J. K. P. Purd who remains in charge. All the regular observations are made daily none are forwarded by telegraph, except when the instrumental ind tions are unusually threatening.

The principal object of the station is the display of cautionary sig of which sixteen have been ordered during the year, and eleven of t reported as justified at the station.

The observer remarks, in reference to the verification of these sig as follows:

March 8, 1873.—No damage, as far as heard from. At 11.26 p. m., the wind velocity of thirty-five miles per hour.

March 11–12, 1873.—The signal caused some vessels to stay in harbor—one ca said he would have lost his vessel had he made sail.

March 20–23, 1873.—The signal prevented several vessels from leaving port, and they escaped the gale. The captain of the steamer Island Home won't leave port the signal is hoisted. No damage reported.

March 24–28, 1873.—Several vessels anchored in the harbor, and escaped the gal

April 16–18, 1873.—One vessel wrecked on Broad Shoal, four and a half miles Nobsque light-house; all the crew saved.

May 2–5, 1873.—The Island Home did not leave port, and escaped the gale.

May 8–9, 1873.—No damage reported. Several vessels anchored in the harbor d the gale.

August 13–15, 1873.—No damage at this place. The steamer New Bedford took ing, and did not run her trips; also the steamer Island Home.

The office is on Water street, and well located, in a meteorolog point of view. The instrument shelter, which is of the standard patt projects in the usual manner from a window facing the north.

The anemometer, wind-vane, and rain-gauge are placed on a platf built on the roof of a shed connected with the house in which the o is located, and are well exposed.

The fishermen of the place are of the opinion that it is one of the m important points on the coast for the display of signals, as it is not usual for from 200 to 300 vessels to seek shelter in the harbor in of storms.

The station was inspected in January of the present year, and fo in a fair condition; but all errors were corrected under the supervision of the inspector.

The observer has forwarded all his mail reports promptly and in a satisfactory shape.

WYTHEVILLE, VIRGINIA.

[*Official Number*, 91.]

Latitude	36° 58′
Longitude	81° 05′
Elevation of barometer above sea-level	2294.8 feet.

This station was occupied January 16, 1873, by Sergt. F. Z. Gosewisch, who still remains in charge and has given entire satisfaction by the prompt and neat manner with which all reports have been forwarded.

The office is well located over the store of Messrs. Crush & Snow, and the roof exposure of the instruments is good. The station has not been inspected, and the details of the position of the several instruments is unknown. Their condition is reported as good by the observer. No reports are received here and none sent by telegraph, the station being one of observation alone. The local observations are regularly furnished to the press.

YANKTON, DAKOTA.

[*Official Number*, 95.]

Latitude	42° 50′
Longitude	96° 44′
Elevation of barometer above sea-level	1296 feet.

An observer was ordered to this station March 11, 1873, and he began sending regular telegraphic reports April 1, 1873. The office was at first located some distance from the town in a building belonging to Mr. Clevenger, and fitted up for the purpose by that gentleman, but as the wire by which it was connected with the main telegraph-office did not work satisfactorily, the observer moved, July 3, to a room on the third floor of the St. Charles Hotel, at the corner of Capitol and Third streets, where it is eligibly located and convenient of access to the principal public buildings and to the river. The roof exposure of the instruments is excellent. The instrument-shelter projects in the usual manner from one of the office windows, facing west, as a northern front could not be obtained.

No reports are received here, and consequently no bulletins issued, except those of the local observations, which, with the monthly abstracts, are regularly furnished the Weekly Press, and published in good form.

The station was inspected in July of the present year, and found in good condition. Several irregularities in the manner of keeping the records were discovered, and corrected under the supervision of the inspector. Sergt. N. Phelps has been in charge of the station since its establishment, with the exception of one month, when he was absent with permission, and his place filled by Sergt. George Onslow. All mail reports have been forwarded promptly and in proper form. River observations are made and reported in the usual manner each afternoon. The gauge used is one constructed by the observer, and although roughly made, is accurately graduated. The bed of river is the zero point of the gauge, and the actual depth of water in the channel is therefore reported.

In reference to the interest taken in the service the inspecting officer remarks as follows:

> I learn from most reliable sources, Governor Burbank, Colonel Foster, A. Q. M., and other gentlemen, that a misapprehension existed among the citizens and others as to the scope of the observer's duties at this point. They supposed that he was to foretell storms, and when the exceedingly severe storm of April 13 came upon them without warning, driving from their camp into private houses the men of the Seventh Cavalry there was a great feeling of bitterness toward the observer by the enlisted men of that organization, and they threatened violence to him within hearing of citizens. The observer was then located in the suburbs, and did not visit town, and so had no personal threats. The misunderstanding as to his duties has been removed, yet the citizens retain their interest in the service.

SPECIAL RIVER-STATIONS.

Since the date of the last annual report nineteen stations have been selected on the principal western rivers and their tributaries, at which regular river observations are made and reported to this office by telegraph. These stations are independent of those occupied by enlisted men of the signal-service, and the observations are limited to the rise and fall of the rivers in which they are located, the state of the weather, and the direction of wind at the time of report. Each station is in charge of some well-known citizen, who takes sufficient interest in the service to make the observations regularly and correctly, and the general result of the past year's experience has been satisfactory in demonstrating both the practicability and the usefulness of the work. The reports are sent over all the river circuits, and dropped at each of the regular stations on the principal rivers. The following table shows the names of the several stations, the rivers upon which they are located, the name of the observer, and the date at which each began reporting:

	Stations.	Rivers.	Names.	Commenced reporting.
1	Freeport, Pa	Alleghany	David Alter	April 17, 1873
2	Hermann, Mo	Missouri	Edward Kehr	April 24, 1873
3	Jefferson City, Mo	do	Louis C. Lohman	May 12, 1873
4	Oil City, Pa	Alleghany	J. D. Thompson	April 20, 1873
5	Brownsville, Pa	Monongahela	J. Allen Hubbs	June 6, 1873
6	Evansville, Ind	Ohio	A. C. Pushee	April 21, 1873
7	Confluence, Pa	Youghiogheny	M. Tannehill	April 23, 1873
8	New Geneva, Pa	Monongahela	H. T. Davenport	April 24, 1873
9	Lexington, Mo	Missouri	Z. S. Mitchell	April 28, 1873
10	Kansas City, Mo	do	H. A. M. Vaughan	April 21, 1873
11	Brunswick, Mo	do	G. D. Kennedy	May 1, 1873
12	Little Rock, Ark	Arkansas	C. H. Conradt	April 21, 1873
13	Plattsmouth, Nebr	Missouri	A. L. Child, M. D	April 20, 1873
14	Marietta, Ohio	Ohio	J. H. Best	April 19, 1873
15	Saint Joseph, Missouri	Missouri	A. L. Kerr	May 8, 1873
16	Warsaw, Ill	Mississippi	D. H. Cox	May 7, 1873
17	Paducah, Ky	Ohio	Capt. C. Bachman	May 1, 1873
18	Booneville, Mo	Missouri	W. H. Young	April 28, 1873
19	Le Claire, Iowa	Mississippi	J. P. Disney	June 2, 1873

From July 1 to the present date, only one report per week from each station has been received by telegraph; but the observations have been kept up regularly at all of them, and reported weekly by mail on the established form adopted by the office. The regular daily telegraphic reports will be resumed October 1 and continue until the close of navigation renders them unnecessary. The instructions issued to these special stations, with the cipher in which the reports are transmitted, and the location of the "bench-marks" at all the river-stations, both regular and special, have been previously submitted to you and approved. Other instructions will be issued from time to time, as occasion requires.

Longitude	64° 21′
Elevation of barometer above sea-level	

Began reporting September 27, 1873, and received via Buffalo.

The reports from all these stations, except Fort Garry, are collected at Toronto by Prof. G. T. Kingston, the chief of the Dominion meteorological bureau, and forwarded by him in a consolidated form. The same cipher is used as for those made at the regular stations in the United States, and weekly transcripts of the observations are forwarded regularly by mail on forms prepared by Professor Kingston. The numbers given the several stations are for the convenience of our own observers in reporting them on Form 19.

RECAPITULATION.

Number of sergeants on station at this date	88
Number of assistants on station at this date	93
Number of deaths during the year	5
Number of desertions during the year	5

Of the deaths, three were accidental and two from yellow fever.

Total number of maps issued during year	320,770
Total number of regular bulletins issued during year	143,097
Total number of river-bulletins issued during year	23,210
Total number of press-reports issued during year	23,224
Total number of post-office bulletins issued during year	895,014

Paper 13 is a table of condensed meteorological statistics reported from these stations. The report from the observer on the island of Saint Paul, in the Aleutian group, presents some points of peculiar interest, and is given separately in Paper 14.

There are seventy-eight stations now established in the United Sta
and in regular operation, being an increase of thirteen during the ye
The plan on which these have been designated was minutely describ
in the last annual report.

For the exact study of the phenomena of the upper portions of t
atmosphere, and to determine more accurately the proper reductions
be made for great elevations, temporary stations have been establish
at favorable points. In addition to the regular station on the sumn
of Mount Washington, New Hampshire, three others, one at the ba
and two dividing the interval between the base and the summit, were
operation between June 1 and July 31, (Paper 15.) The summit of Mou
Mitchell, North Carolina, was occupied as a station during the months
June, July, and August, and the base of that mountain was also oc
pied during August, (Paper 16.) For similar reasons the difficult ta
of establishing a permanent telegraphic station on the summit of Pik
Peak, Colorado, at an elevation of 14,216 feet, has been accomplished, a
the station is now in operation. A telegraphic line seventeen miles
length has been built to connect the summit with Colorado Springs, a
a road has been made by which it is easily accessible. A substant
building has been erected on the crest of the peak. By the care of t
honorable the Secretary of War proper steps have been taken to decla
a portion of the mountain to be a Government reservation.

Material aid has been contributed to the establishment of this stati
by citizens of Colorado Springs, and by the officers of the Denver a
Rio Grande Railroad Company. Mr. Matt. France, of Colorado Sprin
and Mr. B. F. Woodward, of Denver, are entitled to special thanks
their exertions. It is in contemplation to take observations from t
base of the mountain, as well as the summit, during a period sufficie
for useful comparisons. The discussion of these observations will
entered upon as soon as is practicable.

The system of thorough inspection of each station by officers specia
instructed for the purpose, alluded to in the last annual report, has be
continued, experience showing it to be indispensable. First Lie
Charles S. Smith, Fourth United States Artillery, acting signal-offic
continued on that duty from October last until April 5, subsequen
being relieved from detail with this office. First Lieut. A. W. Gree
Fifth United States Cavalry, acting signal-officer, has been during t
whole year engaged in inspection duty, to the manifest benefit of t
service. Paper 17 shows the dates at which sixty-four separate s
tions have been inspected and by whom.

The reports now received by comity of exchange with the Dominion
Canada are from eleven stations, four having been added during t
year. Return reports are telegraphed to Prof. G. T. Kingston, of T
ronto, chief of the meteorological bureau of the Dominion, at his
quest. Separate reports have also been received from Prof. Char
Smallwood, director of the Montreal Observatory. Warnings are giv
to the meteorological bureau of the Dominion whenever the conditio
known at this office are such as to indicate unusually dangerous weath
on the lower lakes or eastern provincial coasts, in a manner and by
special arrangement of cipher agreed upon. The immediate value
this international system to both countries is now frequently show
while its future good results, political and practical, will increase
time, and with the more thorough interchange which will follow the
tension of both services.

After much delay arrangements have been completed by which t
egraphic reports, regarded as essential for meteoric indications,

There are seventy-
and in regular o

now receives its stated reports is ninety-two, of which seventy-eight are the regular stations in the United States, eleven belong to the Canadian system, and three to that commenced for the West Indies.

Applications have been received for the establishment of one hundred and forty-nine stations, which, with the present appropriations, cannot be supplied. Paper 25 exhibits a list of these stations.

The number of observer-sergeants on duty at this date is eighty-eight. The assistants to observers at stations number ninety-three.

Justice to the two civilian clerks provided by law for this office requires the renewal of the recommendation contained in the last annual report, that they should receive a more adequate compensation, which would be accomplished by an amendment of section 19 of the act of Congress approved March 3, 1863, changing the words "class two" to "class four." The services of these clerks are valuable. Their laborious duties can to some extent be estimated by reference to the appropriate heads in Paper 8. On examination of the classification of clerks in the several bureaus of the War Department, it is ascertained that no duties similar in character and equal in amount to those performed by the two clerks of the signal-service, are paid for at so small a rate as that provided for them ten years ago, when the work of the office was comparatively small.

The comparison and testing of meteoric instruments for the purpose of establishing standards has been continued, as also the study and experiment to provide improved apparatus for the equipment of stations. An electrical self-recording river-gauge, devised by Second Lieut. D. J. Gibbon, acting signal-officer, especially for use at river-stations, is still being tested, as is also one more recently devised by First Lieut. H. H. C. Dunwoody, acting signal-officer and assistant. The electrical self-recording attachment to the anemometer, devised by Lieutenant Gibbon, heretofore adopted by this office, has been improved by him, through the addition of electrical machinery connecting it with the wind-vane, by which the direction, as well as the velocity, of the wind is continuously given. A description of this instrument is given in Paper 7. Lieutenant Gibbon has also devised a self-recording barometer, the fluctuations of which are recorded continuously by means of electricity. This instrument has advantages in simplicity and cheapness.

The instrument-room at this office has been under the general charge of First Lieut. H. H. C. Dunwoody, acting signal-officer and assistant. Paper 20 gives a detailed report of the instruments compared and corrected for station-work, and tested for other purposes during the year.

The telegraphic service connected with the office has been, since January 1st last, under the special charge of Mr. James A. Swift, electrician, whose duties have been well performed. Seven hundred and sixty-eight thousand and sixty-six cipher words of weather-reports have been received by telegraph at, and three hundred and nineteen thousand nine hundred and ninety-two sent from, this office during the year. Three thousand seven hundred and twenty-one telegraphic messages, other than weather-reports, but connected with that work, have also been received, and three thousand four hundred and eighty-six sent. Eighty-three thousand one hundred and thirteen mailed reports have been examined and compared with telegraphic copies, and filed for future reference. The auditing of the bills of telegraph companies is also under the supervision of the electrician.

In the regular discharge of the duties of the office three telegraphic now receives its stated reports is ninety-two, of which seventy-eight a the regular stations in the United States, eleven belong to the Canadi system, and three to that commenced for the West Indies.

Applications have been received for the establishment of one hundr and forty-nine stations, which, with the present appropriations, cann be supplied. Paper 25 exhibits a list of these stations.

The number of observer-sergeants on duty at this date is eighty-eig The assistants to observers at stations number ninety-three.

Justice to the two civilian clerks provided by law for this office quires the renewal of the recommendation contained in the last annu report, that they should receive a more adequate compensatio which would be accomplished by an amendment of section 19 of the a of Congress approved March 3, 1863, changing the words "class two" "class four." The services of these clerks are valuable. Their labo ous duties can to some extent be estimated by reference to the appr priate heads in Paper 8. On examination of the classification of cler in the several bureaus of the War Department, it is ascertained that duties similar in character and equal in amount to those performed the two clerks of the signal-service, are paid for at so small a rate that provided for them ten years ago, when the work of the office w comparatively small.

The comparison and testing of meteoric instruments for the purpo of establishing standards has been continued, as also the study and e periment to provide improved apparatus for the equipment of statio An electrical self-recording river-gauge, devised by Second Lieut. D. Gibbon, acting signal-officer, especially for use at river-stations, is sti being tested, as is also one more recently devised by First Lieut. H. C. Dunwoody, acting signal-officer and assistant. The electrical se recording attachment to the anemometer, devised by Lieutenant Gi bon, heretofore adopted by this office, has been improved by hi through the addition of electrical machinery connecting it with t wind-vane, by which the direction, as well as the velocity, of the wi is continuously given. A description of this instrument is given Paper 7. Lieutenant Gibbon has also devised a self-recording barom ter, the fluctuations of which are recorded continuously by means electricity. This instrument has advantages in simplicity and chea ness.

The instrument-room at this office has been under the general char of First Lieut. H. H. C. Dunwoody, acting signal-officer and assista Paper 20 gives a detailed report of the instruments compared and co rected for station-work, and tested for other purposes during the year.

The telegraphic service connected with the office has been, since Ja uary 1st last, under the special charge of Mr. James A. Swift, electricia whose duties have been well performed. Seven hundred and sixt eight thousand and sixty-six cipher words of weather-reports have be received by telegraph at, and three hundred and nineteen thousan nine hundred and ninety-two sent from, this office during the yea Three thousand seven hundred and twenty-one telegraphic message other than weather-reports, but connected with that work, have al been received, and three thousand four hundred and eighty-six sen Eighty-three thousand one hundred and thirteen mailed reports ha been examined and compared with telegraphic copies, and filed f future reference. The auditing of the bills of telegraph companies also under the supervision of the electrician.

In the regular discharge of the duties of the office three telegraph ports are received daily, each report averaging eight hundred and xteen cipher words. The average time of transmission from the mo- ent the instruments are read at the several stations until the reports f those observations are received at this office, has been eighty-five inutes.

The office has still to regret that its telegraphic facilities are not as omplete as the best discharge of the duties in its care would require. he hope is entertained that this source of difficulty will be removed.

The preparation of the deductions, known as the Synopses and Proba- ilities, from the meteoric data recorded at this office, and the editing of e regular publications, the "Weekly Weather Chronicle," "Monthly eather Review," "Synopses, Probabilities, and Facts," have been dur- g the year in immediate charge of Prof. Cleveland Abbe, assistant; irst Lieut. Robert Craig, acting signal-officer and assistant; Prof. hompson B. Maury, assistant; and First Lieut. H. H. C. Dunwoody, cting signal-officer and assistant. The duties have been performed by em in rotation, each having care of the preparation of the deductions r the period of one month, and for the succeeding month supervising e publications above mentioned. The services of these officers upon ese and other special details assigned them have been marked by delity.

A regular course of study and practice is pursued by officers at this ffice in preparation for these duties. As a portion of this course the llowing writings are required to be carefully read in the order named, iz: Loomis's Treatise on Meteorology; Practical use of Meteorological eports and Weather-Maps; Instructions to Observer-Sergeants; Smith- onian Directions for Meteorological Observations; Buchan's Handy ook of Meteorology; Piddington's Horn Book; Espy's Philosophy of torms; Fitz Roy's Weather-Book; Martin's Rotary Theory of Storms; ey's Laws of the Winds; Espy's First Meteorological Report; Espy's ourth Meteorological Report. In connection with these works, and eference had to others in the library of the office, the officer is required make studies of the daily weather-maps noting thereon the atmos- heric conditions as indicated by the reports, with the variations in ressure, temperature, humidity, wind-direction, &c., and the consequent hanges as exhibited from day to day. The study of text-books and ublications on the subject of meteorology is not considered sufficient r purposes of the education in view, without constant comparison of e reports in their sequence, and the charting of them as received, with e advice and correction of officers experienced in the duty. The chart- g of weather-maps is thus practiced until the officer becomes thor- ughly familiar with the process, after which the preparation of deduc- ons from the tri-daily reports is commenced and made a continuous tudy. Special attention is given to the subject of cautionary signals, ith reference to the direction and velocity of wind considered danger- us at the various cautionary-signal stations.

The tri-daily Synopsis and Probabilities have been issued from this ffice in the manner explained in previous reports with unfailing regu- arity at 10.30 a. m., 6.30 p. m., and 1 a. m., daily, no case of omission or erious delay having occurred during the year.

The display of bulletins and weather-charts at stations, the supply of rompt and gratuitous information to the press, and the exhibitions at esignated stations of day or night signals at times of supposed special anger, have been continued. The total number of tabulated bulletins ssued and distributed at the several lake, sea-coast, and river ports, and inland cities have been one hundred and forty-three thousand and ninety-seven, excluding the special river-bulletins, which have amounted t twenty-three thousand two hundred and ten. The total number c weather-charts issued and distributed has been three hundred an twenty thousand seven hundred and seventy, and the press-reports (exclusive of the publication of the Synopses and Probabilities) have bee twenty-three thousand two hundred and twenty-four.

The attention of the office has, during the past year, been frequentl directed to the fact that the publication of the deductions known a Probabilities alone, as given in many of the journals, is not a sufficien exhibit of the data supplied. It ought to be understood that these deductions given alone constitute but an inferior portion of the information furnished. The plan of the office has been, from the beginning, t publish for public use, and tri-daily, four principal papers: 1st. Th tabulated bulletins, exhibiting tri-daily the observations as read at eac station; 2d. A chart presenting these data chartographically; 3d. A Synopsis; and 4th. A Probability. Each of these papers ought to b read with reference to the others, and if such reading is made with th use of local instruments and some knowledge of meteoric laws, it wil be found that the instances are few in which important meteoric change occur without some warning given of their approach. The tabulate bulletins are prepared for the press at most of the principal cities. Th Synopsis is invariably transmitted to the several press associations together with the Probabilities, the former condensing the facts upo which the opinions stated in the latter are based. The publicatio of the Probabilities alone causes the forecasts to appear as mere oracles and not, as they are designed to be, scientific inferences or deduction from meteorological data actually recorded.

The office has continued, under the direction of the Secretary of Wa its exertions to solve for the special benefit of agricultural interests th problem of giving promptly the information contained in the daily weathe reports to the many farming and other communities not now reached b telegraph, and for which the copies published by the press do not arriv in time for use. The plan adopted has been to divide the territory of th United States into districts, each district having a distributing point a or near the center, from which two printed copies of the Synopses an Probabilities are forwarded by mail to all post-offices within the district and which can be reached by rail, steamer, or mail-coach by 4 p. m. o the same day. These reports are designed to exhibit the probable condition of the weather in the district, including not only notice of storm generally considered dangerous, but, when possible, giving indicatio of dry weather, light rain, extremes of temperature, and frost.

On December 7 last a request was made by the Chief Signal-Officer t the honorable the Postmaster-General, with the approval of the honorable the Secretary of War, for his favorable action upon the plan indicated, and was responded to by the Postmaster-General on Decembe 11, with assurance of the co-operation of the Post-Office Department and the information that he had issued an order instructing all postmasters receiving the above-mentioned reports by mail to post them immediately in the frames supplied for that purpose by this office. S soon as the necessary arrangements could be made, the plan went int operation. The following list shows the stations taken up as distributing points, the time when the special work commenced at each, and th number of post-offices supplied from it.

Station.	Commenced.	Number of offices supplied.
1. Washington	January 3, 1873	146
2. New York	February 25, 1873	607
3. Cincinnati	April 7, 1873	753
4. Chicago	June 14, 1873	798
5. Detroit	July 21, 1873	337
6. Buffalo	July 25, 1873	153
7. Boston	July 15, 1873	403
8. Springfield	July 28, 1873	71
9. Memphis	August 25, 1873	59
0. New Orleans	September 15, 1873	30
1. Pittsburgh	October 1, 1873	298
2. Saint Louis	September 1, 1873	435
3. Montgomery	September 20, 1873	45
4. Nashville	September 4, 1873	96
5. Bangor	September 30, 1873	160

The correspondence on this subject is contained in Paper 21, to which s attached a chart exhibiting the distributing districts contemplated, as well as those established. The co-operation of the War and Post-Office Departments thus described now provides for the regular distribution daily of eight thousand nine hundred and eighty-two copies of he weather report to four thousand four hundred and ninety-one different post-offices, and will still be extended as rapidly as possible. The whole number of these special bulletins printed and distributed is eight hundred and ninety-five thousand and fourteen. The Synopses and Probabilities, as deduced from the midnight observations, are telegraphed at once from the central office at Washington to each of the distributing stations, and there printed in large type by the enlisted men of the signal-service, addressed to the several postmasters, and mailed according to a systematic arrangement, which takes advantage of every moment to reach each point with the greatest speed. The success already attained in the practical working of this plan, and the obvious satisfaction it has given to the public, should be a subject of gratification to the War and Post-Office Departments, as it is to this office. The thanks of the Department are due the honorable the Postmaster-General for the facilities furnished, and under him to Mr. George B. Bangs, superintendent of the railway mail-service, for his personal as well as official assistance. By the different modes of publication adopted for the service, each of which has been arranged with definite purpose, and including that had through the public press, it is estimated that the information emanating from this office reaches daily one-third of the households in the United States.

For the purpose of rendering the office better acquainted with the wants of the agricultural community, many agricultural societies have, at the request of the Chief Signal-Officer, appointed permanent committees to correspond and confer with the office. One hundred and seventeen of these organizations are now in correspondence, (Paper 22,) and notice has been given by others that committees will soon be appointed by them. A list of similar committees appointed by the boards of trade and chambers of commerce, forty-four in number, is in Paper 23.

It has been a duty of the office to publish the information obtained by it in the form of collated statistics. The Weekly Weather Chronicle, which was briefly alluded to in the last annual report as commenced, has been enlarged and improved. Each copy exhibits a general summary of the meteoric changes over the whole region from which reports are received, during the seven days previous to the day of publication,

as well as for each separate day. A special reference is made to t
river-reports. (Paper 24).

During the year nine thousand four hundred and two copies have be
gratuitously distributed to committees of agricultural societies a
boards of trade, to scientific persons in this country and abroad, and
the press.

The Monthly Weather Review, the publication of which was co
menced in January last, reviews the facts for each month concerni
storms, winds, rain-fall, air, river, and ocean temperatures, and the ri
and fall of rivers. It is accompanied with charts showing the tracks
low barometric pressure, the isobars, isotherms, and prevailing win
for the month. The number of copies of this publication issued duri
the year has been six thousand seven hundred and ninety-six. Pap
25 includes the reviews issued since the date of the last annual report

The Daily Bulletin has been prepared as a monthly publication f
each month, from and including September, 1872. Each volume e
hibits the several reports from synchronous observations at the vario
stations at the regular hours, viz, 7.35 a. m., 4.35 p. m., and 11 p.
Washington mean time, with the weather-chart on a reduced scale f
each 'observation in immediate connection not only with the S
nopsis and Probabilities issued for each observation, but the "Fact
succeeding the latter being collated in detail from the reports
the observers made at the next regular observation following t
issue of each Probabilities. This publication exhibits the data up
which this office has been compelled to act in making its tri-daily a
nouncements, and presents for general use the information gathere
This work is not only a contribution of data valuable to meteoric scienc
but aims to show impartially and in detail the successes and failures
the office.

The publications of the office thus referred to amount in the cour
of the year to many volumes. The scope of an annual report permi
this brief reference to them only.

At the request of Prof. Spencer F. Baird, United States commi
sioner of fish and fisheries, the work of the observers at the statio
favorably located for the purpose has been increased, by requiring o
servations to be taken daily of the water temperatures in the differe
rivers and harbors. The reports of these observations are made on
special form, (Paper 24.) These reports have not yet been continu
sufficiently long to permit of safe deductions, but promise to have us
ful results in the solution of problems beyond the important objects
pisciculture throughout the United States for which they were at fir
instituted.

An additional duty was imposed upon the Secretary of War by t
provision of the act of Congress approved March 3, 1873, entitled—

An act making appropriations for sundry civil expenses of the Government for the fiscal year endi
June thirtieth, eighteen hundred and seventy-four, and for other purposes, as follows:

Be it enacted by the Senate and House of Representatives of the United States of Amer
in Congress assembled, That the following sums be, and the same are hereby, approp
ated for the objects hereinafter expressed, for the fiscal year ending June thirtiet
eighteen hundred and seventy-four, namely:

* * * * * * * * *

For contingencies of life-saving stations on the coast of the United States, fifte
thousand dollars. And that the Secretary of War be and hereby is authorized to
tablish signal-stations at light-houses, at such of the life-saving stations on the la
or sea coasts as may be suitably located for that purpose, and to connect the same wi
such points as may be necessary for the proper discharge of the signal-service by mea
of a suitable telegraph line in cases where no lines are in operation, to be constructe
maintained, and worked under the direction of the Chief Signal-Officer of the Army,

e Secretary of War and the Secretary of the Treasury; and the use of the life-sav-
g stations as signal-stations shall be subject to such regulations as may be agreed
pon by said officials; and the sum of thirty thousand dollars is hereby appropriated
carry into effect this provision.

In discharge of this duty a telegraph line has been completed ten
iles in length, from Seaville to Peck's Beach, N. J., connecting at Sea-
lle with the line of Western Union Telegraph Company. The mate-
al is ready, and the work is in progress on the construction of a line
om Sandy Hook to Barnegat Inlet, N. J., a distance of fifty miles, con-
ecting with the Western Union line at Long Branch. These connec-
ons will allow of signals being displayed at the life-saving stations es-
blished at Sandy Hook, Long Branch, Barnegat, Atlantic City, Peck's
each, and Cape May. The plan in contemplation proposes the estab-
shment of signal-stations at life-saving stations and light-houses along
e ocean-coast of New Jersey, from Sandy Hook to Cape May, at dis-
nces of twenty-five miles from each other. A line is in process of
ection from the village of Rockport, Mass., to Thatcher's Island light-
ouse, a distance of three miles and a half, of which one mile and a
alf will be cable.

A line connecting the stations at life-saving stations and light-houses
ong the coast from Norfolk, Va., to Cape Hatteras, N. C., a distance
f one hundred and thirty-seven miles, and on one of the most danger-
us coasts of the United States, is in construction. It is expected that
e above-mentioned lines will be completed during the present year.
ttention is invited to the fact that the whole work now done in the
ection of these lines, and to be done hereafter in operating them, has
een done and is to be done by the officers and men of the signal-serv-
e of the Army. By no other agency could so large an amount of line
situated be constructed with the small appropriation provided.

It is not necessary to dwell upon the benefits to result from the work
f the stations thus provided for. Not only will the meteoric informa-
on regularly received be greatly increased in amount and value by that
ken on the sea-coast and at the actual sea-level; but storm-warnings
isible at a sufficient distance from shore to allow often of the proper
eans to be taken for safety, can be given to vessels approaching dan-
erous coasts, while on the occurrence of inevitable disaster assistance
an be summoned at once from the neighboring life-saving stations, and
formation regarding the occurrence be transmitted to underwriters
nd others interested. Communication can readily be held by signal
nd telegraph with vessels of the naval and merchant marine from
Vashington and from other cities, and the coast will be provided with
vidette system, invaluable in time of possible war. The expense of se-
uring these advantages to the country is comparatively trifling, the
bserver-sergeant of the signal-service at each station being charged
ith the telegraphic operations, and the necessary lines being con-
ructed, maintained, and worked under the direction of the Chief Sig-
al-Officer by enlisted men of the signal-service. It is to be hoped that
ongress will, by future appropriation, allow the extension of this spe-
ial work to the lake and sea coasts, where the life-saving and light-
ouse systems are deemed necessary, affording thus coast-service un-
aralleled in the world. The thanks of the Chief Signal-Officer are due
Mr. S. I. Kimball, the chief of the Revenue-Marine Bureau, who has
endered rooms in each of the selected station-houses of the life-saving
ervice for the observer-sergeant of the signal-service, and has provided,
y the erection of a flag-staff on the new buildings, for the proper dis-
lay of signals.

At the request of Hon. Francis A. Walker, Superintendent of
United States Census, for the contribution by this office of chart
form part of the statistical atlas of the United States, the compila
of which is, by law, in his charge, such are now in course of prep
tion, showing, for the year 1872-'73, the following meteorological det
viz: The isobarometric lines; the number of times each directio
wind is recorded; the average hourly velocity of each wind; the n
mum recorded velocity of each wind; the total annual movement of
wind; the distribution of storms or storm frequency.

While responding, when possible, to all requests made for statis
and other information, the thanks of the Chief Signal-Officer mus
rendered to many scientists, in this country and abroad, for their v
able assistance. Especial acknowledgment is to be made to Prof. J
Tyndall, of the Royal Institution, London; Sir William Thomson,
fessor of natural philosophy in the University of Glasgow; Dr. F
Patterson, of San Antonio, Tex.; Rev. James Rankin, D. D., presi
of Hobart College, Geneva, N. Y.; and Mr. M. F. Stevenson, Gai
ville, Fla., have contributed regular or occasional reports of value.
agent of the Pacific Mail Steamship Company at New York has
warded a large number of marine records on forms furnished by
office, and since July, 1872, regular monthly meteoric reports have b
received from the commanding officer of the United States receiv
ship Vermont, stationed at the Brooklyn navy-yard. Capt. J. Sang
of the bark Express, of Annapolis, Nova Scotia, has presented a log-b
showing records of voyages from June, 1872, to February, 1873,
one hundred and thirty-eight logs of vessels have been collected by
observer-sergeants stationed along the Atlantic and Pacific coasts
procuring which the sergeants at Wilmington, N. C., and San Franci
Cal., have been most active. It is much to be regretted that so fe
the forms prepared for the purpose of being filled up with report
observations made at sea, and widely distributed, have yet been
turned to this office. The accurate reports of storms on the ocea
whether passing from or advancing upon the coasts of the United Sta
are of much importance for study, even when not in time for immed
deductions.

An interesting contribution to meteoric knowledge, prepared by P
C. Abbe, assistant, from the records of the office, will be found in Pa
32, showing a chronological list of the auroras observed at the respec
signal-service stations from November 11, 1870, to July 31, 1873, in
sive.

On June 12, 1871, Observer-Sergeant Frederick Meyer, Signal-Serv
United States Army, was, at the special request (approved by the S
retaries of War and of the Navy) of Capt. C. F. Hall, commander of
north polar expedition, authorized by Congress, ordered to report
him for duty in connection with that expedition with a complete se
meteorological instruments and signal equipments furnished by
office. The orders and instructions of Sergeant Meyer, and a rep
prepared by him since his return, are included in Paper 27.

The following table, prepared by First Lieut. Robert Craig, act
signal-officer and assistant, gives the lowest observed readings of
low barometers, with number of areas traced for each month, from
tober 1, 1872, to September 30, 1873, inclusive:

Oct.,	1872,	eight areas of low barometer, varying from	29.35 to 2
Nov.,	1872,	nine areas of low barometer, varying from	29.08 to 2
Dec.,	1872,	twelve areas of low barometer, varying from	29.17 to 2
Jan.,	1873,	ten areas of low barometer, varying from	29.07 to 2

b., 1873, nine areas of low barometer, varying from .... 29.04 to 29.49.
arch, 1873, eleven areas of low barometer, varying from .... 28.80 to 29.52.
ril, 1873, ten areas of low barometer, varying from .... 29.27 to 29.62.
y, 1873, nine areas of low barometer, varying from .... 29.28 to 29.63.
ne, 1873, ten areas of low barometer, varying from .... 29.26 to 29.95.
ly, 1873, thirteen areas of low barometer, varying from .... 29.44 to 29.68.
g., 1873, twelve areas of low barometer, varying from .... 29.49 to 29.79.
pt., 1873, eleven areas of low barometer, varying from .... 29.21 to 29.76.

The charts appropriate to these areas will be found among those at-
ched to Paper 25.

As the severe storms of the 14th August, in New Jersey, and the
th and 25th of the same month, in Nova Scotia, were, from the want
stations at requisite points, and also from temporary failure of the
legraph, not fully presented for study in the regular tri-daily maps of
is office, and yet possessed features worthy of special attention, Pro-
ssor Abbe, assistant, was directed to collate in reference to it such
formation as could be obtained from the logs of vessels and similar
urces. The detailed results of his work are given in Paper 28.

Both of these storms had their origin and much of their course beyond
e limits of the United States, and beyond the scope of the observa-
ons taken at the regularly-established stations. The presence of sim-
ar cyclones passing near the coasts of the United States, and which
e likely to be encountered by vessels sailing from the sea-coast ports,
ill, it is hoped, be recognizable by the observations to be taken at the
ries of stations now in process of establishment at the life-saving sta-
ons along the coasts. The telegraphic communication to be estab-
shed with the Bermuda Islands will be of utility in this connection.

A valuable report by Prof. I. A. Lapham upon disasters to ship-
ng upon the great American lakes, from the 1st of January to the 1st
September, 1873. is hereto annexed, as Paper 29.

On May 26, last, Observer-Sergeant James Mackintosh, Signal-Ser-
ce, United States Army, was ordered to proceed to the district trav-
sed by the violent tornado which passed through Iowa and Illinois on
ay 22, and to make a full report of its origin, path, and attendant
enomena. (Paper 30.)

The storm of April 14–18 presented features of peculiar interest. A
scription of the storm, with charts of its course as traced, prepared
Observer-Sergeant Theodore Smith, Signal-Service, United States
rmy, is herewith, (Paper 31.)

The stations on the sea and lake coasts, especially designated as
utionary-signal stations, at which the display of signals is ordered for
e benefit of commerce, are the following, thirty in number, viz: New
rleans, Mobile, Jacksonville, Savannah, Charleston, Wilmington, N.
, Norfolk, Cape May, Baltimore, New York, New Haven, New London,
ood's Hole, Boston, Portland, Me., Eastport, Oswego, Rochester, Buf-
lo, Erie, Cleveland, Toledo, Detroit, Alpena, Grand Haven, Chicago,
ilwaukee, Escanaba, Marquette, and Du Luth.

During the year orders have been issued for the display of the caution-
y signals, described in previous reports, in anticipation of eighty-eight
obable storms. In seventy cases the storms anticipated manifested
eir effects at one or more of the stations at which the signals were
dered; the signals thus giving warning to shipping and other inter-
ts which would otherwise, perhaps, have been dangerously exposed.

The order for each cautionary signal is special, and issued under the
llowing rules: The display is ordered at a signal-station whenever the
ficer in charge of that duty considers it probable that there will be
perienced within twelve hours at that station, or within one hundred

miles thereof, and on any navigable stream, a wind dangerous to nav gation. Dangerous winds on the navigable waters are, for the order question, considered to be those reaching a velocity of twenty-five mil per hour, as registered by the anemometer on the land, provided th the temperature be decidedly above freezing. For temperature decided below freezing, and for foggy weather, winds are to be considered da gerous when the velocities are registered so low as twenty miles. T direction of the wind is not taken into consideration for the prese If at the tri-daily report next following the ordering of the signals appears that the danger is not so imminent as was apprehended, t signal is to be ordered down. It is not to be displayed for an inde nitely long time. The immediate area referred to by the respecti cautionary signals is as defined on the map of cautionary-signal statio at the office of the Chief Signal-Officer, which may be generally describ as a circle, with a radius of one hundred miles, the station being t center. When any warning is given for points upon the lakes, the oth lake-stations are notified of the warning. Each station is also notifi when the signals are ordered down at any other station.

As in preceding years, where there has been error of display it h been on the side of caution. While on occasions the signals order may have proved unnecessary, and are so reported unverified, on t other hand no extensive storm has occurred in the regions included the system of cautionary signals without warnings of its approach ha ing been displayed in at least part of its course. While neither the i dications upon which signals are certainly to be displayed, nor modes verifying the display, have been as yet accurately arrived at, the publ confidence exhibited in the heed given to the warnings when they a shown, has evidenced their general utility.

Pursuant to the arrangements with Prof. G. T. Kingston, of Toront chief of the Dominion Meteorological Bureau, to which reference w made in the last annual report, forty dispatches, giving warning of a proaching storms, have been sent to the Bureau under his charge.

The geographical divisions and subdivisions of the United States reference to which meteoric phenomena are considered, and which a referred to in the preparation of Synopses and Probabilities, are as f fows:

DIVISIONS.

1. Pacific States.
2. Extreme Northwest.
3. Northwest.
4. Southwest.
5. Southern States.
6. Lake Region.
7. Middle States.
8. New England States.
9. Saint Lawrence Valley.

SUBDIVISIONS.

1. Missouri Valley.
2. Upper Mississippi Valley.
3. Lower Mississippi Valley.
4. Ohio Valley.
5. Western Gulf.
6. Eastern Gulf.
7. Upper Lakes.
8. Lower Lakes.
9. South Atlantic.
10. Middle Atlantic.

A chart illustrating the territorial limits of each of these divisio and subdivisions is hereto attached. (Paper 32.)

The percentage of verification for each geographical division or subivision named has been for the year as follows:

ew England	81.50	Ohio Valley	76.42
iddle States	81.17	Western Gulf	74.40
outh Atlantic	79.92	Upper Lakes	75.25
ower Lakes	78.90	Northwest	74.00
astern Gulf	77.16		

These percentages have been obtained by a careful analysis of the deuctions as announced each day for each geographical division or subivision mentioned, and the comparison of them with the facts subseuently obtained from the weather-reports for that date. A numerical alue is given each item, as temperature, pressure, wind-direction, &c., ientioned in each deduction and verified; the sum of these values ivided by the number of deductions exhibiting the average of verificaion for any period with approximate accuracy.

The aggregate percentage of verification ranges higher in New Enland, the Middle States, the South Atlantic, and the Lower Lake egion, than in the West, Southwest, and Northwest.

With a more rigid and scrutinizing mode of calculation than was efore adopted, the percentages have improved upon those of the preeding year; the analysis of the year's work indicating at once the wisdom f increasing the number of stations and the regions in which they hould be established. The percentage of verifications for each district xhibits a proportion to the number of stations from which reports havng reference to the atmospheric conditions in the district under considration have been received. It is thus to a certain extent mathematically emonstrated that the rules applied for the deductions of the forecasts re practically correct, and that with increasing facilities the percentage f verifications can be annually increased. It is not known that a demontration of this character has been before attained.

In pursuance of invitations issued by the Austrian government, a ongress of persons charged with meteoric duties was convened in ienna in the month of September last, at which the Chief Signal-fficer was present under instructions from the Secretary of War. The roceedings of this congress cannot fail to be of importance as tending o establish a uniformity in methods of conference and of action. The pportunities it afforded of personal meeting and observation among the epresentatives from different countries must be productive of beneficial ffects. The concurrence of the congress by a unanimous vote in a roposition to the effect that it is desirable, with a view to their exhange, that at least one uniform observation of such character as to be uitable for the preparation of synoptic charts should be taken and reorded daily and simultaneously at as many stations as practicable hroughout the world, is regarded as of especial importance in reference o duties of the character of those now undertaken by the United States.

With the study of synoptic charts, the field of which may, with roper co-operation, on land and at sea, be made almost world-wide, here is reason to anticipate the discovery of facts relating to atmosheric phenomena and to the origin and movement of storms not hitherto ecognized. It is to such co-operation effort will be directed. It is gratiying to state, in this connection, that arrangements have already been nade with the meteorological offices at St. Petersburg, London, and onstantinople to commence the exchange by mail on January 1, 1874, f one daily simultaneous report taken over the vast territorial extent f the Russian and Turkish Empires, the British Islands, and the United tates. (Paper 33.) The co-operation of the systems of other nations, f scientific associations, societies, and individuals is sought for and expected. With a work in view, not for the sole benefit of any country people, but reaching to the good of all, there is ground to hope a worl assistance.

In the review of the year's duties there is found encouragement the future. While the office has had to encounter many difficulties, details of which would be out of place in this report, there has been assurance that its labors have not been without a value generally rec nized. The office acknowledges, as in preceding years, the gene support of the popular opinion, of scientific men, of the press, and of War Department. Without this aid the work achieved would ha been impossible. Whenever errors have occurred, it has been recogni as inevitable that some must occur in the present condition of scien Success has been generously commended. The evidences of inter and progress in similar duties are extending in all countries. Th utility is no longer questioned, and effort at home and abroad turns o toward their development. The field becomes world-wide with the pro ise of results a few years ago hardly to be hoped for. There will needed time and labor; there must often be disappointment; but public good to follow is certain.

I am, sir, very respectfully, your obedient servant,

ALBERT J. MYER,

Brig. Gen., (Bvt. Ass'g'd,) Chief Signal-Officer, U. S. A

PAPER 1.

RECORD OF SIGNAL-CAMP OF INSTRUCTION, FORT WHIPPLE, VA.

Officers instructed during the year ending September 30, 1873.

Name.	Rank and corps.	Reported for instruction.	Relieved from instruction.	Remarks.
David J. Gibbon ...	Second lieutenant Ninth Cavalry.	Sept. 4, 1872	Dec. 20, 1872	Completed full course signaling, telegrap and meteorology.
Eugene O. Fechét..	Second lieutenant Second Artillery.	Dec. 4, 1872	Dec. 26, 1872	Relieved before comple full course of instruct
W. B. Weir	Second lieutenant Fifth Artillery.	June 16, 1873	....	Still under instruction.
F. C. Grugan	First lieutenant Second Cavalry.	Sept. 27, 1873	....	Do.
George S. Grimes ..	First lieutenant Second Artillery.	Sept. 4, 1873	....	Reviewing course.
C. C. Wolcott	First lieutenant Third Artillery.	Sept. 4, 1873	....	Do.

PAPER 2.

Amount of field-practice had by each officer.

Name.	Rank and corps.	Number of days flag-practice was had.	Number of nights torch-practice was had.	Remarks.
David J. Gibbon ...	Second lieutenant Ninth Cavalry	14	6	
Eugene O. Fechét..	Second lieutenant Second Artillery.	....	....	Study of Manual of Sig Wand Practice, &c., twelve days.
W. B. Weir	Second lieutenant Fifth Artillery	16	7	Still under instruction.
F. C. Grugan	First lieutenant Second Cavalry ..	....	....	Do.
George S. Grimes ..	First lieutenant Second Artillery	....	....	Reviewing course.
C. C. Wolcott	First lieutenant Third Artillery..	....	....	Do.

PAPER 3.

able showing the instruction of candidates for the grade of observer-sergeant from October 1, 1872, *to September* 30, 1873.

Name.	Instruction commenced.	Date of examination and promotion.	Remarks.
ichard Williams		Oct. 1, 1872	In charge of station at La Crosse, Wis. Reduced August 12, 1872; re-appointed sergeant October 1, 1872.
avid W. Harnett	Sept. 19, 1872	Oct. 19, 1872	Reduced to the ranks for misconduct; deserted, and now in confinement at Fort Whipple, Va.
ames H. Marsh	Aug. 26, 1872	....do	In charge of station at Keokuk, Iowa.
. Filbert Nagle	Sept. 1, 1872	Nov. 1, 1872	On duty at office of the Chief Signal-Officer.
harles H. Sprenger	....do	....do	On duty at Fort Whipple, Va.
ichael F. Tighe	Mar. —, 1872	....do	On duty at New York City.
imothy O'Neil	Sept. 23, 1872	Nov. 15, 1872	In charge of station at New London, Conn.
Villiam Black	Sept. 30, 1872	....do	In charge of station at New Haven, Conn.
ames K. P. Purdum	Oct. 2, 1872	....do	In charge of station at Wood's Hole, Mass.
red. M. Clarke		Dec. 11, 1872	Discharged the service September 26, 1873.

PAPER 5.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., June 7, 1873

[Circular No. 17.]

This circular is published for the information of those desiring to enter the sign service, United States Army, with reference to its field duties, including field-sign and electric telegraph, as distinguished from the full duties of that service, which clude the observation and report of storms and display of cautionary signals, &c.

1. Entrance into this service in all cases is by enlistment as a private soldier in the Regular Army of the United States, the pay, quarters, allowances, and duties being, in the first instance, and unless changed after instruction, detail, or promotion, those of a private soldier in the signal-service, United States Army. All men enlisted are drilled in the use of arms and disciplined in the duties of soldiers. The term of service is five years, unless sooner discharged. The Secretary of War has power to grant discharges, which this office is authorized to promise when applied for on proper grounds and at times when no special injury to the service would result therefrom; but as a rule no application for discharge will be favorably entertained until after two years of faithful service, and not then, except as above specified. With the single exception that men enlisting for the signal-service will not be transferred to any other branch of the Army, no promise will be given which can alter or affect the usual terms of enlistment. The service, while strictly military, is also probationary, with opportunities for advancement, depending mainly on the good conduct and capacity of each individual.

Married men and those under twenty-one or over forty years of age are not enlisted. The standard height is five feet four inches and upward.

2. Applicants can present themselves in person to the officer in charge at Fort Whipple, Va., near Washington, D. C., or to the observer-sergeants of the signal-service at the following points, viz: New York, Philadelphia, Baltimore, Cincinnati, Saint Louis, Boston, Buffalo, Chicago, Cleveland, Detroit, Indianapolis, and Louisville, which sergeants are ordered to present proper applicants to the recruiting officers of the United States Army in those cities. *No promise or statement different from this circular, made by any one, is authorized, or will be allowed to affect the terms of enlistment of any recruit.* Recruits enlisted at Fort Whipple, or at the above-mentioned cities, are placed on duty in the first instance at Fort Whipple or at such other stations where their services may be made available. They will not be precluded from eventual advancement to the full duties of the signal-service, and promotion, in case they prove fit and worthy, but will not be considered as included, upon their enlistment, in the regulations made for those recruits who may have been enlisted with special reference to the full duties above referred to. They may, however, be subject to detail on any of the duties of the signal-service in the discretion of higher authority.

3. The pay and allowances of either a sergeant or private vary according to the character and place of the duties and the length of the service of each individual. The following table exhibits the average amount per month for five years, according to the present law:

Rank.	When at Fort Whipple, Va., or at a military post.	When on station.	When at this office.
Sergeants	$31 87	$74 68	$92 49
Privates	17 18	57 99	88 45

Of the above amounts $1 per month in the third year, $2 per month in the fourth year, and $3 per month in the fifth year, are retained, and will not be paid until final discharge after faithful service. An allowance for clothing, averaging $3.02 per month for sergeants and $2.98 for privates, is also included in the above, which, if clothing is not drawn in kind, is also retained until discharged. When at Fort Whipple, both sergeants and privates receive quarters and rations, and at all places are, when ill, provided with medical attendance and medicines.

4. Applications being frequently made for enlistment in this service, conditioned upon the applicant being placed upon some specified duty or stationed at a particular place, it is to be clearly understood that no such qualification of the contract of enlistment will be allowed or considered, the wants of the service, which cannot be known in advance, regulating all details of duty.

By order of the Chief Signal-Officer of the Army:

GARRICK MALLERY,

Captain and Brevet Lieut. Col. U. S. A., Acting Signal-Officer and Assistant.

PAPER 6.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., July 1, 1873.

[Circular No. 18.]

This circular is published for the information of those desiring to enter the service of the United States with reference to the full duties of the signal-service, including not only field-signals and telegraphy, but also the observation and report of stor by telegraph and signal, and display of cautionary signals, for the benefit of comme and agriculture, under the joint resolution of Congress approved February 9, 1870, acts of Congress approved June 10, 1872, and March 3, 1873, and the authorizatio the Secretary of War, and for such other duties as may be required in connect therewith.

1. Entrance into this service in every case is by enlistment as a private soldie the Regular Army of the United States, the pay, quarters, allowances, and duties bei in the first instance, and unless changed after instruction, detail, or promotion, as h inafter explained, those of a private soldier in the signal-service, United States Ar All men enlisted are drilled in the use of arms and disciplined in the duties of soldi The term of service is five years, unless sooner discharged. The Secretary of War power to grant discharges, which this office is authorized to promise when applied on proper grounds, and at times when no special injury to the service would re therefrom; but as a rule no application for discharge will be favorably entertai until after two years of faithful service, and not then, except as above specified. W the single exception that men enlisting for the signal-service will not be transferre any other branch of the Army, no promise will be given which can alter or affect usual terms of enlistment. The service, while strictly military, is also probationa with opportunities for advancement, depending mainly on the good conduct and pacity of each individual, and it is intended to place competent men, who enlist w a view to promotion to the position of observer-sergeant, on duty where instruct can be obtained and opportunity for study afforded.

The Chief Signal-Officer, in his annual report for 1871 to the Secretary of War, r ommended that a commission in the Army be given each year to the sergeant v shall in that year be reported as most distinguished for fidelity and ability, and in e of the years 1872 and 1873 an enlisted man of the signal-service was promoted to b commissioned officer.

Married men and those under twenty-one or over forty years of age are not enlist The standard height is five feet four inches and upward.

2. Enlistments at this office are confined to candidates who have passed an exa nation prior to enlistment, before a board appointed by the Chief Signal-Officer, wh meets at this office every Thursday at noon, and before which they must appea their own expense. Testimonials as to good character and capacity, signed by pers known at this office, must be presented, together with an application in the handw ing of the candidate, (addressed to the Chief Signal-Officer of the Army,) stating age, past and present avocation, and residence. The examination will be chiefly rected to accurate spelling, legible handwriting, proficiency in arithmetic, with spe attention to decimal fractions, and the geography of the United States. After a vorable report from the above-mentioned board, and also a physical examination the surgeon, the candidate will be enlisted, assigned to the signal-service, and un detailed for some special duty connected with this office, will be ordered to Fort Wh ple, Va., near this city, where the signal-service detachment and school of instructio stationed, and will be placed at once under instruction to prepare for the duty of sistant to an observer on station; also performing the general duties of soldiers hours when not required for instruction. When reported by the instructor as qu fied, the enlisted man will, as the wants of the service require, be detailed on above-mentioned duty of assistant. The length of time between being ordered un instruction and being detailed as assistant varies with the capacity and conduct the individual, but has averaged about six weeks.

3. Men who do not present themselves at this office for the above-mentioned exa ination can apply in person to the officer in charge at Fort Whipple, Va., to the observer-sergeants of the signal-service at the following points, viz: N York, Philadelphia, Baltimore, Cincinnati, Saint Louis, Boston, Buffalo, Chica Cleveland, Detroit, Indianapolis, and Louisville, which sergeants are ordered present proper applicants to the recruiting officers of the United States Ar in those cities. *No promise or statement different from this circular, made any one, is authorized, or will be allowed to affect the terms of enlistment of any recr* Recruits enlisted at Fort Whipple, or at the above-mentioned cities, are placed duty, in the first instance, at Fort Whipple, as private soldiers of the signal-service tachment for at least two months, after which they have the privilege, their cond being good, to be examined, on their application, by the same board above alluded the examination being identical with that required of the civilian candidates prio enlistment, and on passing that examination they are ordered under instruction un the same circumstances as above explained in paragraph 2. The distinction is, t being enlisted in the above cities before examination by the board, they are transpo to Fort Whipple at the expense of the United States, also receiving rations *en route* commutation therefor, instead of presenting themselves at this office at their own pense; and also that they take the risk, if they should fail to pass the required exa ination, of remaining on the usual duty of soldiers of the signal-service detachme

nstead of being detailed as assistant to an observer, or on other duty requiring the mount of education exhibited by those passing the examination.

4. All soldiers of the signal-service, wherever enlisted, who have passed the above-escribed examination, and have been instructed and detailed on duty as assistant to n observer on station, or similar duty at this office, are required to perform such du-es satisfactorily for six months before promotion from private to sergeant. As a rule, uch men may, after the expiration of that time, be ordered to Fort Whipple as candi-ates for promotion, and after additional instruction, drill, and discipline in the duties f soldiers, are examined by a board of final examination, also appointed by the Chief ignal-Officer, and meeting at this office, but differing from the board of preliminary xamination before mentioned, both in its members and the character of examination, he latter being exclusively on the course of study and practice in reference to the pecial duties of the service with which the candidate has had the opportunity to be-ome familiar after his enlistment. They will also be examined by a board of officers, onvened at Fort Whipple, as to their proficiency in the military duties of a sergeant.)n passing these examinations the candidate will, as vacancies occur, be promoted to e sergeant, signal-service, United States Army.

5. The duties of an observer-sergeant on station, as also those of an assistant to an bserver, will be chiefly those pertaining to the observation, record, and proper publi-ation and report, at such times as may be required, of the state of the barometer, hermometer, hygrometer, rain-gauge, and other instruments, (instruction in the use f which will be given under the direction of this office,) and the report by telegraph r signal, at such times as indicated and to such places as may be designated by the hief Signal-Officer, of the observations as made, or such other information as may be equired—the telegraphic reports to be forwarded by the regular telegraphic operators, r in such manner as may be directed. The utmost precision will be required in ob-ervations and reports. The specification of these particular duties is not to exclude uch others connected therewith as may be necessary.

The object of this plan is to insure the correctness and regularity of reports by hav-ng them made under military control. It being desired to make this body of men es-ecially select, rigid examinations will be insisted upon.

All the duties will be performed strictly under the discipline of military law, all ersons in the military service being subject to trial and punishment for improper con-uct or neglect of duty under the Rules and Articles of War. The penalties for neg-ect of duty, bad conduct, &c., are dishonorable discharge, or such other punishment s a court-martial may direct, or as may be provided for by the customs of the ervice.

The United States is entitled to the whole time of the person enlisted; but the du-es required on station are of such a nature that, with care and diligence, some time etween the hours of reports, when no active duty is pressing, will generally be at the isposal of the observer, which may be devoted to reading or study. Most of those lready enlisted have had such purposes in view. No employment of this nature can, owever, be permitted to interfere, in any way, with that prompt and constant atten-on to duty which will be insisted upon.

6. The pay and allowances of both sergeant and private vary according to the char-cter and place of the duties and the length of the service of each individual. The fol-owing table exhibits the average per month for five years, according to the present aw:

Rank.	When at Fort Whipple, Va., or at a military post.	When on station.	When at this office.
ergeants	$34 44	$77 25	$95 06
rivates	19 62	60 43	90 89

Of the above amounts $1 per month in the third year, $2 per month in the fourth ear, and $3 per month in the fifth year are retained, and will not be paid until final ischarge after faithful service. An allowance for clothing, averaging $5.59 per month or sergeants and $5.42 for privates, is also included in the above, which, if clothing is ot drawn in kind, is also retained until discharge. When at Fort Whipple, both ser-eants and privates receive quarters and rations, and at all places are, when ill, provided ith medical attendance and medicines.

7. Applications being frequently made for enlistment in this service, conditioned pon the applicant being placed upon some specified duty or stationed at a particular lace, it is to be clearly understood that no such qualification of the contract of enlist-nent will be allowed or considered, the wants of the service, which cannot be known n advance, regulating all details of duty.

By order of the Chief Signal-Officer of the Army.

GARRICK MALLERY,

Captain First Infantry, Bvt. Lt. Col., U. S. A., Acting Signal-Officer and Assistant.

PAPER 7.

INSTRUCTIONS TO OBSERVER-SERGEANTS, SIGNAL SERVICE, U. S. A., DUTY AT STATIONS.

[General Orders No. 32.]

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., September 30, 1873

1. Observer-sergeants, signal service United States Army, on duty at stations, w strictly comply with the following instructions, (in place of those heretofore issued them from this office,) which will also be used as a text-book in all instruction giv to enlisted men at Fort Whipple, Va., or on station.

* * * * * * *

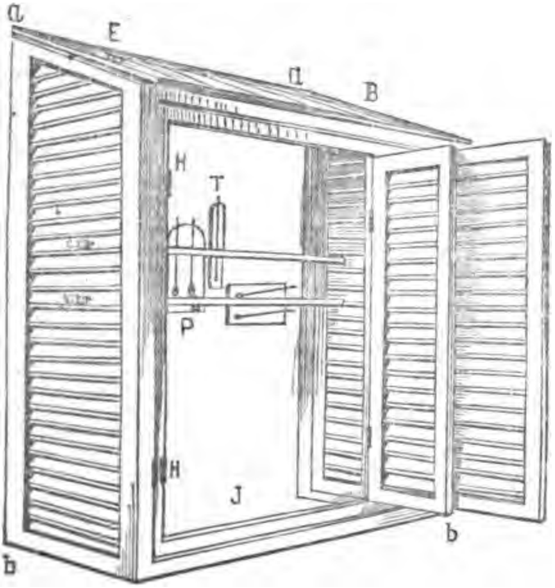
By order of the Chief Signal-Officer of the Army.

GARRICK MALLERY,
Captain First Infantry, Bvt. Lt. Col., U. S. A., Acting Signal-Officer and Assistan

---

INSTRUCTIONS.

1. Each observer, upon arriving at his station, will immediately proceed to secure room suitable for office purposes and the storage of instruments and other Unit States property in his charge. This room must be in the immediate vicinity of t telegraph-office charged with the transmission and receipt of the weather reports, a should be in the upper story of a building and contain at least one window facing t north. In all cases he will endeavor to get permission to occupy the roof of this buil ing for the necessary exposure of his instruments, and, at stations specially designat by the Chief Signal-Officer, for the erection of an instrument-room, in accordance wi plans furnished by this office. A lease of this room for a period of one year, with t privilege of renewal on the part of this office, in accordance with the regular forms be furnished the observer on application to the property and disbursing officer, will made out and properly signed before any expense is incurred in fitting up the room putting up instruments. When such permission cannot be obtained, or a suitable ro found, and at all stations not designated as above, an instrument-shelter will be co structed substantially as follows:



Select a window fronting the north; remove the lattice-blinds, if there be any, a along the exterior jambs of the window place perpendicularly two pieces of lattic work, (a a,) projecting to a distance of from 20 to 24 inches from the panes. At h is distance, 10 or 12 inches from the panes, and at the height of the eye of the ob- ver, when in the chamber, pass from one end of the shelter to the other two small wooden ansverse bars, (c c,) each an inch broad, for the purpose of supporting the instru- ents. Upon the outer edge of the sides fasten, in the usual way, (b b,) the latticed inds which were removed from the jambs, or two others provided for the purpose. iese blinds will be hinged to the side-walls so as to be opened when necessary, and cured in the middle by an ordinary staple and hook. Ten inches outside of this ame-work an outer wall, also of lattice-work, will be placed with the front, opening the center in the same manner as the inner wall. The whole must be covered with small inclined roof of boards, (E B,) placed at least 15 or 20 inches above the in- rument. The lower part, (J,) or the base, may remain open, unless the shelter is ithin 10 feet of the ground, in which case the bottom will be covered with slats 2 ches wide, placed 1 inch apart. The instrument shelter will be painted with white ad. The building selected should be detached from other buildings, and where this nnot be had, should be higher than those surrounding it. Too much attention nnot be given to the proper setting up of the instruments and their protection from cal influences.

2. An observer, upon arriving at his station, will, as soon as practicable, put himself communication with the board of trade, chamber of commerce, board of under- riters, and such other bodies as may desire to co-operate with this office in its efforts make the service locally, as well as generally, useful. If meteorological committees ive not been appointed by any or all of these bodies, their appointment should be ged as a matter of special importance, and the committees requested to place them- lves in communication with the Chief Signal-Officer. He will also communicate with ch colleges, scientific associations, and other institutions of learning as may be cated at or near his station, and will explain to their officers and members the nature id object of his duties, and invite their co-operation. He must bear constantly in ind that it is expected he will use every effort in his power to render his office of the eatest public utility.

3. The office-furniture will be of the plainest kind, and consist only of such articles are absolutely necessary for the proper transaction of business. The room, furniture, id instruments must be kept neat and clean at all times, and always prepared for spection.

4. The regular reports from station ——— will commence with the morning report ———, and from and after that date three observations will be made daily, and trans- itted by telegraph, to ———, and four observations, at different hours, for transmission, eekly, to this office.

5. The observations for telegraphic transmission will be taken daily at —— a. m., — p. m., and —— p. m., (local time,) and after the proper corrections are made, will entered on Form 5, supplied by this office, and also in the daily record of observa- ons and the record of bulletins, and a weekly record of them on Form 4 will be sent this office. The instruments will be read in the following order:

1. Barometer. 2. Thermometer. 3. Hygrometer.
4. Anemometer. 5. Anemoscope. 6. Rain-gauge.

6. The readings of the different instruments must be entered as made in the original cord of observations and *not* copied in from a slip of paper. Observers will habitu- ly carry this book when making an observation, and enter the readings in *pencil*, as oted at the time. They will also use this book for making the proper corrections, as dicated by the marginal references. Pen and ink must *not* be used for entering any oservation or correction. The mid-day observations will be entered on the spare pages this book, using one column for each day properly dated and timed.

7. The reports will be handed by the observer in person to the operator charged with eir transmission, in the order and at the times named below, viz: Report No. 1, at a. m.; report No. 2, at — p. m.; report No. 3, at — p. m. The mid-day report, when nt by telegraph, will be filed as soon as practicable after the observation is made.

8. Observers must be at the telegraph-office, with the reports carefully and plainly ritten out *in duplicate*, ten minutes before the hours named above, in order that the erator may be notified in time to prepare for their transmission, and must obtain the gnature of the operator to *both* copies *of each report*, with the exact time of receipt by m. They will also furnish the manager of the office with a plainly written or printed st of stations (with their proper telegraphic numbers) from which reports are to be ceived at, and also of those to be sent from, his office, with the names of the stations which they are to be sent. If reports are to be transferred or selected for transfer at y station, the observer at that station must personally attend to such transfer or lection, unless prevented by sickness or other extraordinary cause. To provide gainst such an event, he must so arrange with the manager that the regular trans- ission of reports will not be interrupted by his absence.

9. The following is a list of stations, with their proper telegraphic numbers. Those

to be received at station No. —— are underlined in red ink, and any failure to receive them must be promptly reported to this office, with a statement of the probable cause of failure.

Station.	No.	Station.	No.
Cape Roziere, Canada	1	Davenport, Iowa	51
Chatham, N. B	2	Leavenworth, Kans	52
Santiago de Cuba	3	Cairo, Ill	53
Kingston, Jamaica	4	Cape May, N. J	54
Father Point, Canada	5	Galveston, Tex	55
Sydney, C. B	6	Montreal, Canada	56
San Juan, Porto Rico	7	Quebec, Canada	57
Bridgetown, Barbadoes	8	Toronto, Canada	58
Basse Terre, Guadeloupe	9	Punta Rassa, Fla	59
Plaister Cove, N. S	10	Wood's Hole, Mass	60
Saint John's N. B	11	Vicksburg, Miss	61
Portland, Me	12	Memphis, Tenn	62
Boston, Mass	13	Nashville, Tenn	63
New London, Conn	14	Louisville, Ky	64
New York City, N. Y	15	Cincinnati, Ohio	65
Albany, N. Y	16	Saint Louis, Mo	66
Philadelphia, Pa	17	Omaha, Nebr	67
Baltimore, Md	18	Cheyenne, Wyo	68
Washington, D. C	19	Santa Fé, N. Mex	69
Wilmington, N. C	20	Corinne, Utah	70
Charleston, S. C	21	Fort Benton, Mont	71
Savannah, Ga	22	Shreveport, La	72
Augusta, Ga	23	Jacksonville, Fla	73
Lake City, Fla	24	Portland, Oreg	74
Key West, Fla	25	San Diego, Cal	75
Montgomery, Ala	26	Denver, Colo	76
Mobile, Ala	27	Virginia City, Mont	77
New Orleans, La	28	Port Stanley, Canada	78
San Francisco, Cal	29	Port Dover, Canada	79
Norfolk, Va	30	Kingston, Canada	80
Oswego, N. Y	31	Saugeen, Canada	81
Rochester, N. Y	32	Breckinridge, Minn	82
Buffalo, N. Y	33	Fort Sully, Dak	83
Cleveland, Ohio	34	Indianola, Tex	84
Toledo, Ohio	35	Alpena, Mich	85
Detroit, Mich	36	Pembina, Dak	86
Chicago, Ill	37	La Crosse, Wis	87
Milwaukee, Wis	38	Fort Garry, Manitoba	88
Saint Paul, Minn	39	Halifax, N. S	89
Du Luth, Minn	40	Lexington, Ky	90
Pittsburgh, Pa	41	Wytheville, Va	91
Knoxville, Tenn	42	Morgantown, W. Va	92
Indianapolis, Ind	43	Fort Gibson, Ind. T	93
Lynchburgh, Va	44	Eastport, Me	94
Burlington, Vt	45	Yankton, Dak	95
Mount Washington, N. H	46	New Haven, Conn	96
Keokuk, Iowa	47	Erie, Pa	97
Grand Haven, Mich	48	Dubuque, Iowa	98
Escanaba, Mich	49	Pike's Peak, Colo	99
Marquette, Mich	50	Havana, Cuba	100

10. At each station an observation of the barometer will be taken daily at 12 m., Washington mean time, and if a change equal to, or greater than, fifteen hundredths of an inch has taken place since the regular morning telegraphic observation, the fact will be reported immediately by telegraph to the Chief Signal-Officer, with the direction of wind and state of weather and the velocity of the wind in miles per hour; the whole being sent in the same order in which they are given here, and in the regular cipher words. A regular weekly report of these mid-day observations will be made out on Form 4 and mailed to the central office with the other reports on this form.

In these special reports the barometer will be corrected, in the usual manner, for temperature, elevation, and instrumental error.

11. In addition to the midday observation and those made for telegraphic transmission, three others will be taken daily—at 7 a. m., 2 p. m., and 9 p. m., (local time,) respectively. These will be recorded upon Form 4 in the same manner as the telegraphic observations, but on a separate sheet, and a copy of them will be forwarded weekly to the office of the Chief Signal-Officer.

12. After delivering his own reports to the operator, each observer or an assistant designated by the observer will remain in the telegraph-office until they are sent to their proper destination, and until the reports from other stations intended for use at his station are received, or until assured that their receipt has been prevented by some cause beyond the control of the operator. The reports for station No. —— should be received by —— a. m., —— p. m., and —— m., respectively; and when they are de-

ayed beyond these hours, the facts should in all cases be promptly reported to this ffice by mail, with a statement of the cause of delay when known.

13. To avoid useless delay in getting out the bulletins, observers should arrange, whenever practicable, to have the use of a desk or table in or near the operating-room f the telegraph-office, in order that the reports may be translated and written out roperly as rapidly as received. Where permission to occupy the room for this purpose is granted by the manager, a small table will be furnished by this office for the se of the observer, whenever necessary.

14. The telegraph-offices at which the reports are received will be kept constantly upplied by the observers with Form 2, and in all cases the receiving operator will be equired to fill in this form with the name of station, *date*, and time that reports are eceived. Observers will in like manner fill up Form 5 before delivery.

15. *Reports must be made on Sundays at the regular hours, and delivered punctually at the elegraph-office.*

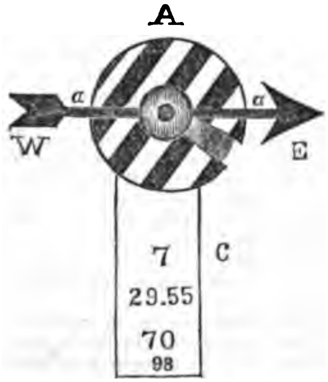
16. Immediately upon the receipt of the morning reports at any station the observer will translate them into ordinary language, and write them out clearly and plainly on the bulletin sheet, (Form 3,) filling in each column with the data named in its heading. The manifold issue of the bulletin will be used, and when completed, copies will be regularly posted in the rooms of the board of trade, chamber of commerce, and such other conspicuous places as may have been officially designated. Copies may also be furnished to private individuals when personal application is made for them at the observer's office, and their preparation does not interfere with the issue of those designed for public use, or with the ordinary and regular duties of the station. A copy will be furnished to each evening newspaper published at the station, and its regular publication secured, if possible. The local observations will invariably be entered in all bulletins, press-reports, and maps. At stations supplied with the manifold maps, their preparation follows the bulletins, and they will be printed as rapidly as practicable, and furnished to such parties as may be designated by this office, upon the recommendation of the observer in charge. The "War Department Weather Map" will then be hanged in accordance with the following key and instructions:

The index consists of an arrow, disk, and card, which show the direction and velocity f the wind, state of the weather, height of the barometer, and height of the thermometer, and relative humidity at the place on which they are affixed. The index will be hanged once daily, at 10 a. m., or as near that hour as is practicable. The arrow flies vith the wind.

A red disk indicates clear weather.
A blue disk indicates sky covered with clouds.
A ¼-blue disk indicates sky one-fourth covered with clouds.
A ½-blue disk indicates sky one-half covered with clouds.
A ¾-blue disk indicates sky three-fourths covered with clouds.
A black disk indicates rain.
A white and black barred disk indicates snow.

A silicate tag projecting below the disk, and held in position by the same screw that astens the arrow and disk, shows the velocity of the wind in miles per hour, the height f the barometer in inches and hundredths, and the height of the thermometer in degrees, Fahrenheit, and the percentage of humidity.

Example:

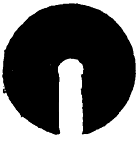


In using these tags a hole will be drilled through them near the upper end, by which hey will be fastened to the screws. When the symbols are changed, these tags need *not* be removed, as the lead-pencil writing may be erased by means of a small pi of sponge slightly moistened, taking care that the face of the map is not soiled.

With proper care these tags will thus last for a number of months.

The barred-disk A indicates snow, and the position of the arrow *a a* that the w is blowing from the west. The upper figure on the card, *c*, shows that the veloc with which the wind is blowing is seven miles per hour. The height of the baromet shown by the middle figures, is twenty-nine inches and fifty-five hundredths, the hei of the thermometer seventy degrees above zero, and the relative humidity, indica by the lower figures, is 98 per cent. When the temperature is below zero the mi sign should always be prefixed.

To facilitate changing the disks they are cut so as to slip on and off without rem ing the clamp, as shown in the following figure:



A calm is indicated by the omission of the arrow.

17. The afternoon reports will be received and translated in the same manner as th received in the morning, and will be bulletined at such places as will insure the great publicity. At stations where the morning papers go to press too early for the publi tion of the midnight report, they will be furnished with the afternoon issue.

18. The night reports, after translation, will be carefully and promptly written on Form 3 and furnished to such morning papers printed at the station as desire th for publication. Observers will endeavor to arrange with the publishers to have reports taken from the observer's office, but where this arrangement cannot be effect the observer, or his assistant, will deliver them in person at the different newspa offices.

19. At stations where the publishers of newspapers desire to have the three full repo of the previous day, they will be supplied by the observers on the manifold form iss by this office for that purpose. In such cases, observers will write up the morning a afternoon reports during the day and evening, so that there will be no delay in gett out the full report at midnight. In filling out the heading of the daily bulletin, publication, the time of the reports will be the exact local time of the place of pu cation, and will be so stated at all stations. In carrying out that part of their d which relates to the publication and distribution of reports, observers will be requi to act promptly and intelligently, as the usefulness of the reports depends wholly up the speed and accuracy with which they are laid before the public.

20. In furnishing weather-reports and items for publication, observers must conf themselves strictly to the instructions issued from this office, and will not, *under* *circumstances, publish, or cause to be published, forecasts or predictions of the weather.*

21. At each station a daily record will be kept of missing reports, showing the nan and official numbers of the stations, with the cause of their non-receipt when know and also such telegraphic errors as may come to the observer's knowledge. A co of this record on Form 19 will be forwarded weekly to this office in the same packa with the originals of Form 2.

22. A copy of the latest synopsis received by the observer or the Associated Pr at stations where it is regularly received, will be posted with each copy of the bulle that is publicly displayed. These copies will be made in manifold on Form 15 furnis by this office.

23. Observers will be held directly responsible for the correct publication of weather-reports at their respective stations, and must take every precaution to gu against errors, especially in the newspaper copies, where they are most frequen found. The accuracy of the published reports must be verified by daily perso inspection, and when errors are found they should be traced to their proper sour and measures taken to prevent their repetition as far as in the power of the observ The use of the regular official heading authorized by this office for all reports must insisted upon, and care taken that correct time of issue is given to both the bulle and synopsis.

24. When the wires of the telegraph company by which the reports are regula transmitted are known to be down or obstructed in such a manner as to prevent th prompt transmission, they will be sent, until such obstruction is removed, over wires of any other company possessing the necessary facilities, as provided for in spe instructions from this office.

25. In all reports and bulletins posted or furnished to the press for publication, due redit must be given to the telegraph company over whose wires they were received.

At all stations ordered to make river-reports, the depth of water above low-water ark will be observed at three o'clock (local time) each afternoon.

The sixth space in first line of Form 5 will be used for the depth in feet whenever e number exceeds eight, and the sixth space in second line for the odd inches.

Whenever the depth does not exceed 8 feet, the word "River" will be used to fill e space in the first line, and the whole depth given in the second line in inches.

In furnishing the reports to the press, and in filling up the bulletin, Form 3, the aily change will be given. This change will be obtained by taking the difference etween the current report and that of the preceding day.

27. Whenever any sudden or unusual change occurs in the condition of the river etween the regular hours of observation, a special series of observations will be made nd the observed depth will be reported in the usual manner at the next succeeding elegraphic report, and these special reports will be continued tri-daily (one at each elegraphic report) until the river resumes its normal condition, when the morning nd midnight specials will be discontinued.

28. In carrying out these instructions, observers will use the cipher-words in the olumn headed "Rise," when the river is rising at the date of report, and those in the olumn headed "Fall," when it is falling.

29. The observations for the morning and midnight special river-reports will be ade within an hour of the time of report if practicable.

Observers must exercise great care in making and recording the river-reports, in der that they can be relied upon as accurate by interested parties.

30. The amount of rain-fall (or melted snow) will be measured and reported at each the three telegraphic reports only.

INSTRUMENTS.

31. Each station will be supplied with the following instruments:

Two standard barometers, (Green's.)
Two standard thermometers, (Green's.)
One standard hygrometer, (Glaisher's model.)
One maximum thermometer.
One minimum thermometer.
One anemometer, (Robinson's,) with self-registering attachment.
One wind-vane.
One rain-gauge.
One clock.

Other instruments may be added from time to time as the necessity for their use be-mes apparent.

BAROMETER.

32. The barometers will in all cases be carefully compared with the standard at this fice before issue, and the amount of instrumental error will be sent with each when leaves this office.

The two barometers furnished each station will be carefully compared by the observer charge once a month, making a series of comparative readings of not less than venty in number, which will be recorded in full in the daily journal as soon as made. making out the monthly abstract of the journal these readings will be embodied in e instrumental report; they must not be corrected for elevation, but for temperature d instrumental error only.

No change of instrumental error will be made by any observer without direct thority from this office.

The barometer should be placed in a room of a temperature as uniform as possible, t heated, nor too much exposed to the sun. It should be suspended at the height of e eye, near a window, in such a manner as to be lighted perfectly without exposure ther to the direct rays of the sun or to the currents of air which are always found at e window-casings and doors. To protect the instrument from external injuries, from st, and from the direct radiation of warm bodies or the currents of air from the indow, observers will fasten the wooden case in which it is carried firmly against the all in a vertical position near the window, in such a manner that the cover will open a direction parallel to the panes. An opening large enough to admit the tube of the rometer will be cut in the upper end of the box; and directly above this, at the dis-nce of one inch, a strong hook will be driven into the wall. This hook should extend o or three inches beyond the box, and upon it the instrument will be suspended. hen not in use the cover will be closed; but when an observation is to be taken it ll be opened, and the instrument drawn out on the hook, clear of the box, and in

the full light of the window. After the observation is made the barometer will
slipped back into the box.

33. All readings of the barometer taken for telegraphic transmission will be correct
by the observer making the observation, for instrumental error, for temperature, an
for elevation, before they are sent from his station. In correcting for temperature, th
reading of the attached thermometer will be used, while in correcting for elevation th
temperature used will be that of the exposed or open-air thermometer.

In correcting for elevation, the height of the surface of the mercury in the cister
of the barometer above the ground must be added, in all cases, to the height of th
station above sea-level, as in the following example, viz: Suppose height of statio
above sea-level to be 670 feet; height of mercury (surface) in cistern to be 17 fe
above the ground; then the elevation to be corrected for would be 687 feet.

In correcting for temperature, Table XVII, pages 66 to 71, Paper C, of Guyot's table
will be used; and for elevation, Table XIX, page 92, Paper D, of the same book, wh
special tables are not prepared under the direction of this office.

34. In transporting a barometer, even across a room, it should be screwed up an
carried with its cistern uppermost. For traveling, it is provided with a wooden cas
On steamboats or railroads, it should be hung up by a hook in the state-room or ca
and the lower end firmly strapped to the side of the room or car to prevent jarrin
In wheeled vehicles, it should be carried by hand, supported by a strap over th
shoulder, or held upright between the legs; but it should not be allowed to rest on th
floor of the carriage, for a sudden jolt might break the tube. If carried on horsebac
it should be strapped over the shoulders of the rider, where it is not likely to be i
jured, unless the animal is subject to a sudden change of gait. When about to be use
it should be taken from its case, and, while screwed up, gently inverted and hung u
when it can be unscrewed. While it has its cistern uppermost, the tube is full—is o
solid mass of metal and glass—and not easily injured, but when hung up a sudden jo
might send a bubble of air into the vacuum at the upper end of the tube, and the i
strument would be useless until repaired. Observers must never *swing* the baromet
or endeavor to force the mercury against the top of the tube without first screwing
the large adjusting screw at the base of the cistern.

If the cistern should become dirty, it can be cleaned with safety, and withou
changing, in the slightest degree, the zero of the instrument. Everything used in th
operation must be clean and dry. Blowing upon any of the parts must be avoided,
the moisture from the breath is injurious.

The instrument being placed upright, the cistern uppermost, unscrew and take
the brass casing which incloses the wooden and leathern part of the cistern. Th
wooden part (which has the grain crosswise, and therefore is not air-tight) is made
two pieces, fastened together by four screws and four brass pieces, each in the form of
half of a circular ring. It will be necessary to take out two of these screws and loos
the other two, when the brass pieces can be taken off. The upper wooden piece,
which the bag is attached, can then be lifted off, and the mercury will be exposed.
then inclining the instrument a little, a portion of the mercury in the cistern may
poured out in a clean vessel at hand to receive it, when the end of the tube will
uncovered. This is to be closed by the *gloved hand*, when the instrument can be i
verted, the cistern emptied, and the tube brought again to its upright position. Gre
care must be taken not to permit any mercury to pass out of the tube. The long scre
which fasten the glass portion of the cistern to the other parts can then be taken o
the various parts wiped with a clean cloth or handkerchief, and restored to the
former positions. The mercury which had been taken out of the cistern must now
cleaned, or it must be replaced by other that is clean and pure. If the old mercury
merely dusty, or dimmed by a film of oxide, the cleaning may be effected by strainin
it through chamois-leather, or through a funnel with a capillary hole at the end of
size to admit of the passage of but a small thread of the metal. Such a funnel is co
veniently made of letter-paper. The dust will adhere to the skin or paper, and th
filtered mercury will present a clean and bright appearance. At stations whe
muriatic acid can be procured, the mercury may be easily and quickly cleaned by mi
ing about two ounces of the acid with it in a small vessel or cup and then pourin
into the vessel clear water until it overflows and carries off all the impurities. Wh
sufficiently pure the water will be poured off and the mercury heated over a gas
lamp light until all remaining moisture is expelled. If chemically impure, it shou
be rejected, and fresh, clean mercury used. With such clean mercury the ciste
should be filled as nearly full as possible, the wooden portions put together and s
curely fastened by the screws and clamps, the brass casing screwed on, and the scre
at its end screwed up. The instrument can then be hung up and re-adjusted. T
tube and its contents having been undisturbed, the instrument should read the sa
as before. If a little mercury has been lost during the operation, and there is none
hand to replace it, no serious harm has been done; but if much is lost, the open end
the tube may become exposed in inverting the instrument, in which case air m
enter. To guard against this error, a little fresh mercury will be added.

Station barometers will not be cleaned unless ordered by this office, or by an inspectng officer, or when such action appears to be absolutely necessary by the presence of ir in the tube. In any case the fact will be promptly reported to this office, stating he number of the instrument so cleaned, with date, and result of the operation.

35. Each observer upon establishing a new station will, as soon as he is furnished vith the correct elevation of his barometer above sea-level, prepare a table for reucing the barometrical observations to that level, in accordance with the following ormula:

Formula.

(Guyot's tables, Paper D, page 88.)

$$c = \frac{f}{N} \times \frac{h'}{h}$$

, is the correction required; *f*, the elevation of the station; *N*, the factor from the able on page 92; *h'*, the reading of the barometer corrected for temperature; and *h*, he normal height of the barometer at sea-level, which may be assumed to be 30 inches or all stations.

For all observations *above* 30.20 and below 29.80 the full formula will be used; but etween those numbers the first number only, $c = \frac{f}{N}$ need be used.

36. The following-named stations having been furnished with a constant correction, re excepted from the provisions of the foregoing paragraph:

Mount Washington, N. H.
Cheyenne, Wyoming Ter.
Denver, Colo.
Santa Fe, N. Mex.
Corinne, Utah.
Virginia City, Mont.
Fort Benton, Mont.
Pike's Peak, Colo.

37. This table will be made to cover the range of the barometer from 28.80 to 30.80, nd will give a correction for every five-hundredths of an inch, and the full formula iven in paragraph 1 will be used in its preparation. The table must be forwarded to his office for revision and approval before it is adopted by the observer.

THERMOMETER.

38. The thermometer should be hung in the instrument-shelter in such a manner hat it will be always in the shade, and at least one foot from the wall of the building o which the shelter is attached, where the Smithsonian form of shelter is used. It nust be protected against the light reflected from surrounding objects, and from rain, now, and hail. The instrument must be placed exactly perpendicular, the middle of he scale being at the height of the eye in order to prevent error in reading. The eadings should be made at all times, and especially in the winter, *through the panes*, vithout opening the window, when the shelter is built out from a window. When the helter is built upon a roof, great care must be exercised in making the readings in rder to prevent the instrument from being affected by the heat of the body or of the antern at night. The observation must be made as rapidly as is consistent with ccuracy.

HYGROMETER.

39. The hygrometer will be placed in the same shelter as the thermometer, and at a listance of one foot from it. The cistern will be kept supplied with pure water at all imes when the temperature of the air is above the freezing point, and the cover of the vet bulb will be changed every month, and the bulb carefully cleaned. The cover may e washed as often as necessary, without removal, by means of a jet of clean water rom a small syringe.

When the temperature of the air is below the freezing point the water will be mptied from the cistern, and in making an observation the wet bulb will be moistned with cold water, and the instant the mercury has reached its minimum its height vill be noted. Alcohol must not be used.

The relative humidity of the air will be obtained from Table VII, page 46, of Guyot's Tables, when special tables are not furnished from this office.

Especial care must be taken to keep the tubes of the hygrometer clean, and the wet ulb properly moistened, and to make the observations and deductions accurately, as the humidity of the air forms an important element in all calculations of atmosphe changes.

Whenever the dry bulb of the hygrometer is observed to show a higher temperat than the exposed thermometer under similar exposure, the observer will cut a circu opening, about three inches in diameter, in the board to which the dry and wet bu are attached, and directly behind the bulbs.

MAXIMUM AND MINIMUM THERMOMETERS.

40. The board which accompanies these instruments will be securely fastened w screws, in a horizontal position, upon the side of the instrument-shelter, or obser tory, near the hygrometer and exposed thermometer.

The brass support for the minimum will be screwed into the upper part of the bo and the holes so arranged as to slightly incline the left end of the support.

The top of the thermometer will be fastened by the small brass screw upon the s port, while the lower end will be dropped into the notch to the left.

For the support of the maximum thermometer the long brass pin with a nut will screwed into the board, in the hole to the extreme right. The nut will be taken and the pin slipped through the hole in the upper end of the instrument, which will securely fastened by replacing the nut and securing it tightly. The plain brass pi then inserted in the hole at the left of the board, and the thermometer placed upo so as to incline slightly in that direction.

The end of the pin to which the maximum is attached must be occasionally oiled prevent friction.

After unpacking the minimum it must be carefully compared with the exposed th mometer, and if an air-speck is found in the column the bulb will be immersed warm water until all the air-bubbles disappear in the space at the top of the tube, *gr care being taken not to break the bulb by heating it too suddenly.*

After fastening the top of the minimum upon the support, the lower end of the strument will be raised until the top of the small index touches the top of the colu of spirit.

The instrument is read by observing the number of degrees upon the scale where top of the index rests. After taking a reading, the bulb or lower end of the ther meter, should be elevated until the index comes down to the temperature of the at the time of the observation, and the instrument will then be dropped into the no at the left of the support, as before.

The maximum is read by observing the number of degrees upon the scale at the of the column of mercury.

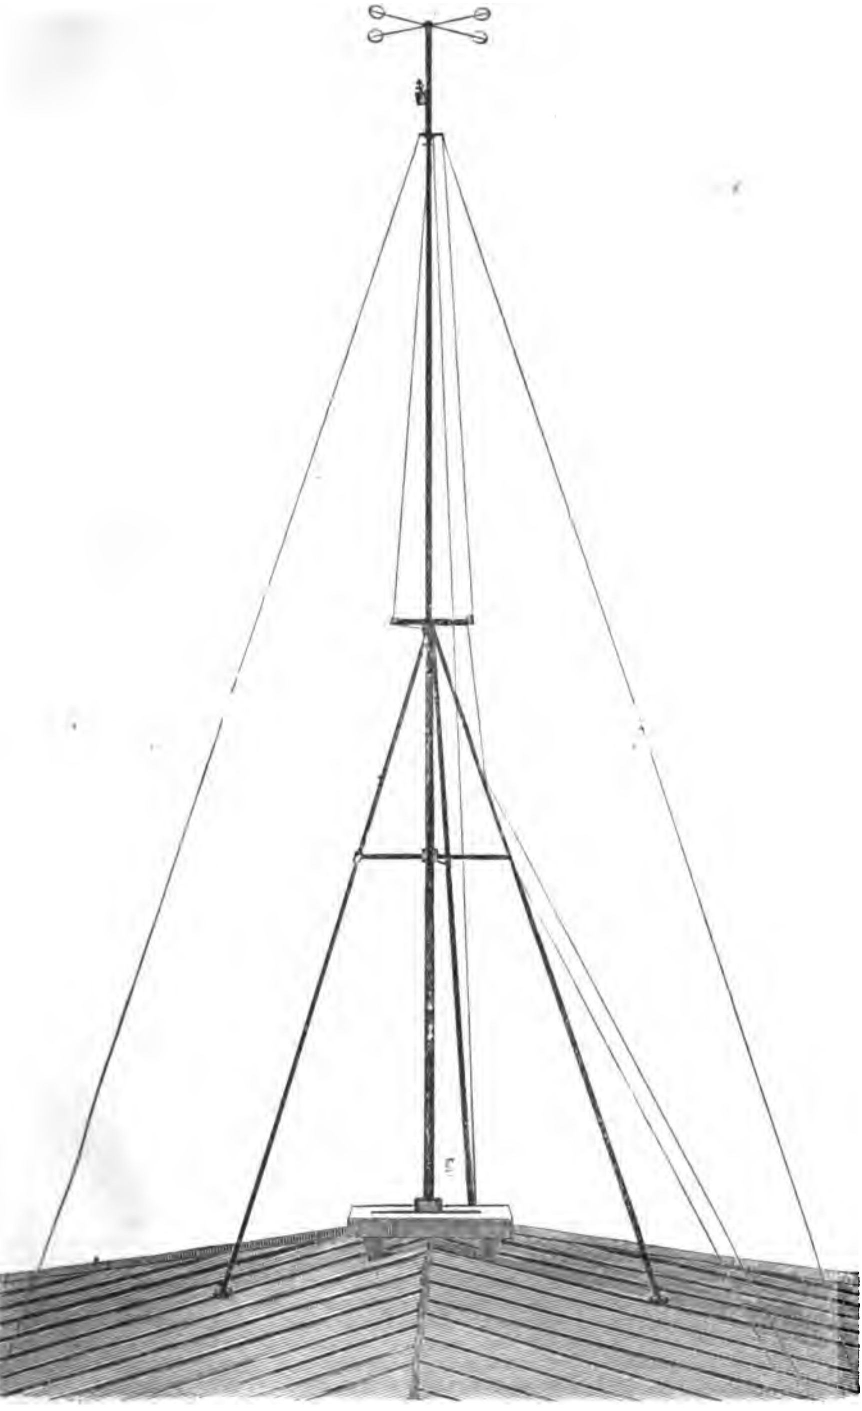
After taking a reading the observer will remove the pin to the left and then t hold of the thermometer, about three inches from the top, and spin it around seve times, or until the top of the column is brought down to the temperature of the ai the time of observation. Care must be taken not to touch the bulb, and also that nut is screwed up sufficiently tight to prevent the instrument from striking against side of the board to which it is fastened. After adjustment, gradually raise the inst ment to a horizontal position, and insert the pin as before.

Care should be taken in elevating the thermometer not to raise the bulb too high the column of mercury would then run to the upper end of the tube.

The observations upon these instruments will be made at the 11.35 p. m. report, a recorded upon Form 4, in the proper column.

ANEMOMETER.

41. The anemometer will be fixed in a vertical position upon the telescopic rod, when this has not been furnished, a post of sufficient height to bring the dial on a le with the eye of the observer, and must be in an exposed situation, so as to receive full force of the wind; when possible, this post should be framed into the roof, to stea it and prevent the instrument from vibrating; but when this cannot be done, it sho be framed at the bottom into two pieces of scantling, not less than three feet in leng that cross each other at right angles, and which can be nailed fast to the roof or pl form upon which the instrument is placed. Short braces can be added when necess to insure steadiness. The outer dial of the instrument is graduated in miles and ten of miles—the figures 1, 2, 3, &c., indicating miles, and the subdivisions tenths. O complete revolution of this dial is equivalent to ten miles of wind, and carries inner dial forward one subdivision. This inner dial registers up to 990 mi and will not be used in making the ordinary observations, but observers will ass themselves, by making a daily comparative reading, that the record of the dials a that of the cylinder read alike at the time of changing the record-sheets on the s registering attachment at mid-day. When a discrepancy is found to exist betw the two records, the anemometer will be carefully examined as to the condition of



Telescopic rod and anemometer.

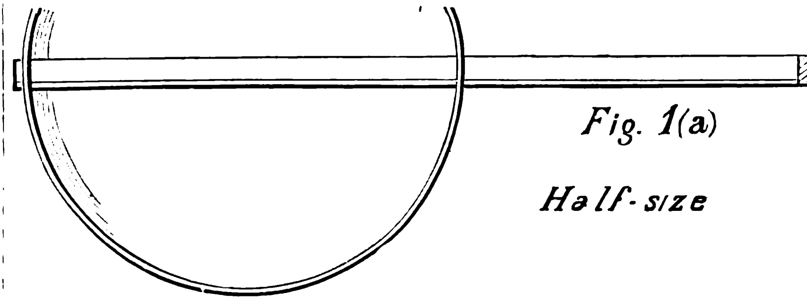


Fig. 1(a)

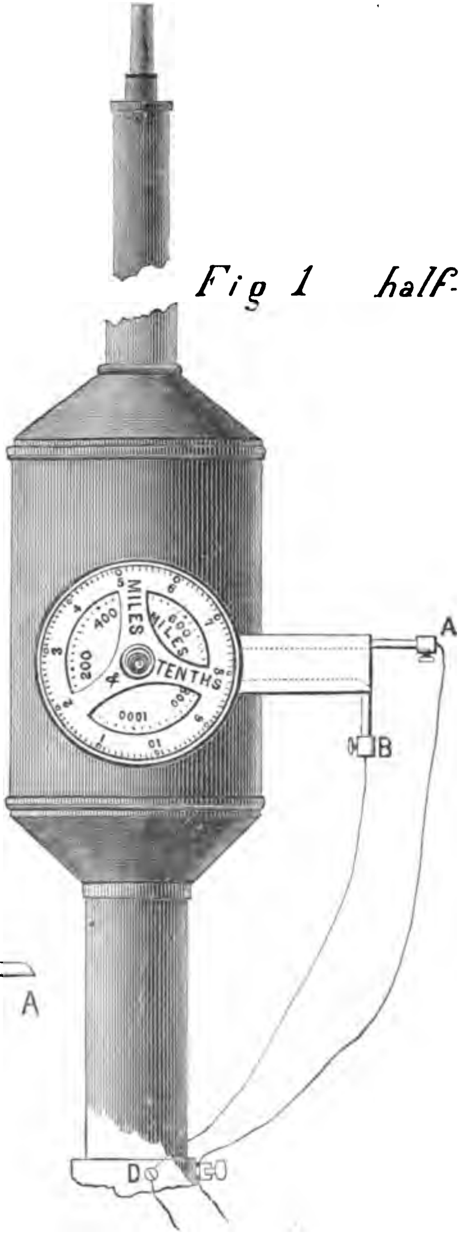

Fig 1 half-si

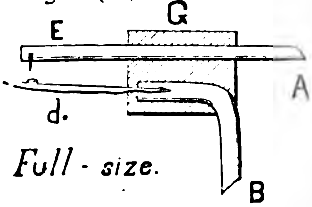
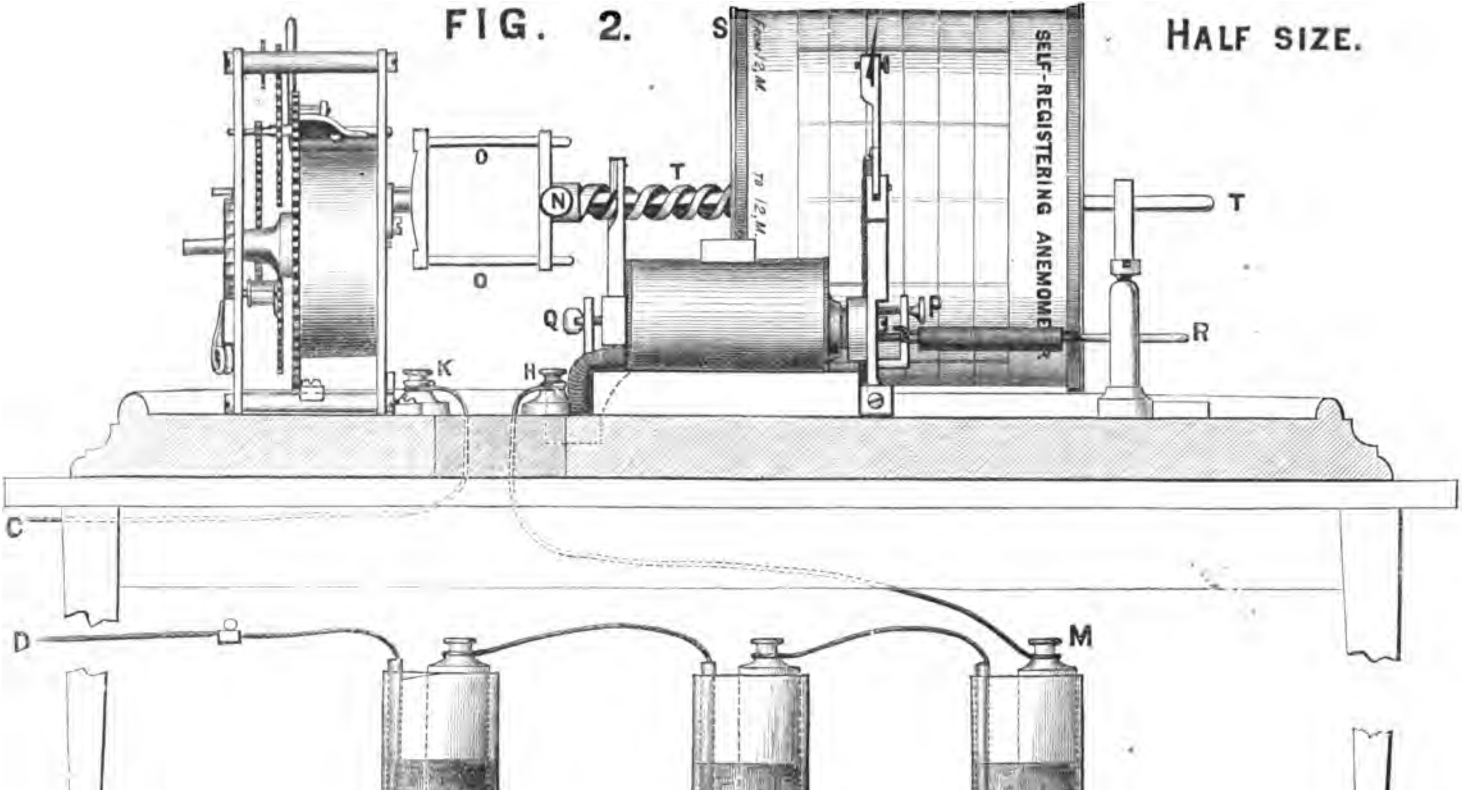
Fig 1(b)



Full-size.

FIG. 2.

HALF SIZE.



lial-pegs, or contact-pins, (which should always be perfectly straight,) and the con-
act-springs. The latter are liable to become corroded by the action of the electric
park or moisture, and must be kept clean.

42. To obtain the velocity of the wind for the regular observations when the self-
egistering attachment is out of order, two readings of the outer dial must be taken,
vith an interval of five minutes between them, and the *difference* between these read-
ngs will be the distance in tenths of miles traveled by the wind in that interval.
This, multiplied by twelve and divided by ten, will give the proximate velocity in
niles per hour. Example: suppose the index of the outer dial to be at 3 when the
irst reading is taken, and at 3.6 five minutes after, the difference, 6, is the distance
raveled in that time; and this, multiplied by twelve and divided by ten, gives a ve-
ocity of seven and two-tenths miles per hour. Whole numbers only will be used in
xpressing the velocity. When the decimal is greater than five-tenths, the unit's
igure will be increased l one; when five or less it will be thrown out. The whole
listance traveled by the wind in any twenty-four hours, provided it does not exceed
one thousand miles, may be obtained from the inner dial by a double observation,
naking the interval twenty-four hours instead of five minutes, and reading the result
lirectly from the dial, without calculation as above described for observations from
he outer dial, and will be entered on both copies of Form 4.

43. The following directions for setting up and the general management of the elec-
ric self-recording anemometer attachment adopted by this office will be observed at
ll stations supplied with the apparatus.

Near the top of the post on which the anemometer is fixed, place two screws, "c"
nd "d," (Fig. 1,) to each of these screws fasten the wires separately, (the insulated
vire to one, and the naked wire to the other,) leaving just sufficient of the upper end
f each wire to reach to the outside ends of the contact-bars "a" and "b," to which
ecurely fasten with the binding screws, taking great care not to loosen the insulating
ttachment "g." Then pass the lower ends of the wire down the post, over the roof,
nd down the side of the house (securing so the wind will not sway them) to the top
f the office-window, pass them in through two small holes (where the sash and shut-
ers will not injure them) and down the inside. In crossing the roof it is well to
asten them between two wooden strips, one on top of the other. One wire should
hen go to the screw-cup "h" (Fig. II) and the other to one pole of the battery at "i,"
hen from the other pole, "m," of the battery run a wire to the screw-cup "k," when
he circuit is completed and the armature will be closed once for each mile the wind
ravels.

Particular care must be taken that all of the connections are tight.

For putting on the paper.—Place the cylinder "s" on a table in front, with the screw
'r" to the left hand, place the paper on the cylinder with the top of it from the screw.
.et the line marked 12 m. (noon) come on the line marked on the cylinder, and place
, small rubber-band on each end. The lines on each end of the paper will then exactly
oincide.

Place the cylinder "s" in its position, so that the end on which there is no screw "t"
vill be close up to the post on which it rests. Slide the small sliding bar "n" on the
orizontal bars "o" "o," until it fits on the ends of the screw axle "r;" then revolve
he cylinder until the pencil rests on the end of the upper line marked 12 m., and
ighten the thumb-screw "n."

To regulate the length of the mark, first move the armature set-screw "p" until the
oint of the pencil rests on the upper line marked 12 m., then (after loosening the set-
crew which holds down the coils) move the magnet by means of the set-screw "q"
ntil the pencil-mark is a little less than one-eighth of an inch long. *The mark should*
ever exceed one-eighth of an inch.

Care must be taken in adjusting the armature spring, so that it will not be too
trong for the magnet, and still strong enough to draw back the pencil in a straight
ine.

The pencils should be kept pointed enough to give a clear, distinct mark.

The clock should be wound every day when the record is changed.

The record should be changed daily at 12 o'clock, noon.

At stations furnished with this self-recording apparatus, the hourly velocity of the
vind will be deduced from the record of the 15 minutes (multiplied by four) immedi-
tely preceding the time of observation.

The screw posts, or, in the old style of anemometer, the connecting-bars, must be
ept bright where they form connection with the conducting wires, to prevent resist-
nce to the passage of the current.

Especial attention will be given to the large dial-screw, and when found loosened it
vill at once be tightened, but care must be taken that it is not screwed up tight
nough to interfere with the free motion of the dials.

The anemometer will be kept well oiled, so that there will be no friction and conse-
uent wear of the wheel-works.

The instrument must not be taken apart unnecessarily, and those having the new style of contacts will be manipulated with especial care.

Observers will familiarize themselves with the construction of the several parts of the anemometer, in order that they may be able to locate faults whenever the instrument is out of order.

BATTERY FOR ANEMOMETER.

44. The field-battery in use at the various stations of observation differs slightly from the ordinary form of Daniells' battery used on telegraph lines, in the manner of construction, the glass jar of the latter being dispensed with, and the negative (copper) element used as the containing vessel instead. The following directions for setting up and using this form of battery will be observed:

1. In putting the battery together for use, place the porous cup inside the copper vessel, and the star-shaped zinc element inside the porous cup.

2. Fill the copper vessel with a strong solution of sulphate of copper (preparing this liquid in another vessel by dissolving about half a pound of crystals of the sulphate in a quart of pure water) to within one inch of the top: *crystals of the sulphate must never be plunged in the copper vessel, neither must sulphuric acid be used to strengthen the battery,* as by so doing the copper vessel will be rapidly destroyed. The porous cup is also filled with pure water to within one inch of its top.

3. After all the cells are filled in this manner, connect the copper (positive) pole of one cup with the zinc (negative) pole of the next one by short pieces of insulated copper wire, using the copper clamps for attaching the ends of the wires to the zincs, and the fixed binding-screws for attaching them to the coppers. The main wires through which the circuit is formed will be attached to the copper and zinc elements of the outside or end cups, respectively.

4. A battery carefully put up in this manner should work with but slight diminution of force, for at least fourteen days, at the end of which time the porous cups will be taken out, emptied, washed thoroughly, and all pure copper on their outer sides removed, and will then be refilled with pure water. Care must be taken to avoid disturbing the paraffine at the bottom of the cups, as it is used there to prevent contact between the zinc and copper elements. The zincs will also be thoroughly cleaned by means of the battery-brush provided for that purpose. When properly cleaned they should present a comparatively bright surface.

5. The liquid in the copper vessels will not be changed as often as the water in the porous cups, but only when it loses its dark-blue color. It will be stirred daily, in order to keep it of equal strength above and below, as the sulphate held in solution has a tendency to settle to the bottom on account of its greater specific gravity, and thereby localizing its action.

6. The binding-screws and the ends of the small connecting wires must be kept scrupulously clean to insure good connections, and the copper vessels kept at least one inch apart to prevent contact. The cells should rest on a *painted* wooden base to insulate them from each other and from the earth, and care must be taken to prevent any escape of liquid from the several cells by which a connection might be formed between them.

7. Whenever practicable, observers will purchase their supply of sulphate of copper at the station where it is to be used; where this cannot be done, it will be furnished from this office.

8. The copper vessels will be kept properly painted on the outside.

45. DIRECTIONS FOR GIBBON'S ELECTRICAL RECORDING ANEMOMETER AND ANEMOSCOPE.

Setting up anemoscope.

1st. From the top of the large wind-vane remove the weather-cap, which is just above the friction-rollers.

2d. Immediately beneath the friction-rollers, and close up under the circular plate upon which the rollers run, place the bisected wooden ring *a a*, Fig. A, and *a′ a′*, Fig. —, on which are fastened four pieces of brass *h* and *h′*, each one-eighth of the circumference of the ring.

3d. Fasten this ring by means of the iron clamp *b* and screw *c*. If necessary a band of metal, leather, or rubber must be placed inside to make the clamp fit.

4th. This ring with one of the one-eighth brass sections *h* must be placed so that one of the sections must be directly opposite the north, and so the opposite halves of the ring exactly meet.

5th. At the point where the arm *d e*, which holds the friction contact *f*, is placed, file the upright shaft *m*, which holds the vane, until it is bright.

Gibbon's electrical recording anemometer and anemoscope.

th. Fasten the friction contact *d, e, f,* to the shaft *m,* so that the parts *x x* will be level, the friction surface *f* impinges fairly upon the brass pieces *h, h, h, h.*

th. Take the five-wire cable *i,* and separate about a foot at one end. At the point separation, wrap the outside covering with all the wires tightly together; clean l the ends of each wire; place the end of the cable where the outside covering is noved with the top one inch below the wooden ring *a a,* and tie it there tem- arily.

th. Carry one end of each of these wires *k, k, k, k* to their respective screws *n, n, n, n,* them off to the right length, and fasten them by the screws to the brass plates.

th. The fifth wire is turned back down the cable, and the end left hanging loose, be afterward connected with the Robinson anemometer.)

0th. A piece of heavy tin or zinc *j* will be wrapped around the cable *i,* and 2-inch e *o* to prevent the cover *s* from rubbing or cutting the cable.

1th. Place the cover *s s* over all the contact, and fasten with the clamp *t.*

2th. At some point "*o*" in the 2-inch tube *o,* (the support of the vane,) drill a hole ut ½ inch in diameter, into which drive a bunch of small wire "P," so that it will oinge upon the shaft *m* to make a good contact, and place a binding screw "*q*" n it.

3th. From this binding screw, run a naked wire to the binding screw, which is not ulated, on the Robinson anemometer. (See "*o,*" Plate 2.)

4th. Carry the cable from here to the electric recorder by the shortest or best route, ing particular care not to turn abrupt corners, and protecting the cable at such nts by wrapping; pass it into the room through a hole, and not where it would be ured by the window.

5th. After getting into the room the wires should be tested for finding the proper nts of the compass; to do this, (before putting the cable up,) it should be tested, and wires numbered 1, 2, 3, 4, and 5 at both ends.

. Attach the anemometer wire *e,* Fig. C, to one pole of the battery by splicing h another piece of wire.

. Carry another wire to the binding post, R.

. Attach a wire from *e* to *f,* shown by the dotted line in Plate I, Fig. C.

. Have some person revolve the large vane, holding it long enough on each point the compass to enable the person at the instrument to touch each wire to either ding post, and when the one through which the current flows is found, fasten it to proper binding post. (The posts are marked N, S, E, W, and R, the latter going to velocity magnet and to the battery.)

6th. Remove the wire *w* and make the connections with the Robinson anemome- by carrying the wire *l,* Plate 2, Fig. A, and "*e,*" Plate I, Fig. C, to the insulated bind- screw on the anemometer *d,* Plate I, Fig. B, and "*m,*" Fig. A.

7th. Run a naked wire from the binding screw "*q,*" Plate 2, Fig. A, to the remain- binding screw on the Robinson anemometer. This wire should be fastened to the ts of the vane and anemometer and not direct to the binding screws, as there would danger of pulling them out.

DIRECTIONS FOR CARE OF INSTRUMENT-PLATE.

The velocity and direction are given simultaneously, the velocity once every mile, l the anemometer closing the circuit for the direction.

FOR PUTTING ON THE PAPER.

Place the cylinder on the table with the screw "*t*" to the left hand, place the paper the cylinder with the top of it from the screw, let the line marked 12 m. (noon) ne on the line marked on the cylinder and place a small rubber-band on each end. e lines on each end of the paper will then exactly coincide.

Place the cylinder A in its position so that the top end will be close up to the post which it rests; slide the small sliding bar N on the horizontal bars *o o,* until it fits the end of the cylinder axle I I; then revolve the cylinder until the pencil which rks the direction rests upon the end of the line marked 12 m. on the lower half of the nk form, then tighten the thumb-screw N.

The length of the mark for velocity is adjusted before being issued. To adjust the ncil to the lines, turn the eccentric screw *c* until the velocity pencil I is in proper ition, which will leave the direction-markers properly adjusted.

The pencils should be kept nicely pointed. The clock should be wound and the rec- changed every day at noon.

WIND-VANE.

6. Two wind-vanes will be furnished at each station; one small one to be sent with observer for immediate use upon his arrival, and one large one to be sent as soon

after the station is opened as practicable. When the latter is received the small on will be removed and carefully stored by the observer for use in cases of emergency.

47. The vane used for getting the direction of the wind must be set in a place as fre and open as possible, in order that the wind may act freely upon it, and must never b sheltered by surrounding buildings or other objects. When the small one is used, ob servers will mark, with the aid of a compass, upon a wooden dial, at the base of the up right which supports the vane, the true meridian of their respective stations. Th magnetic variation at the stations now occupied is shown in the following table:

Station.	Variation east.	Station.	Variation west.

49. When the large vane is received at any station it will be immediately erecte upon the building in which the observer's office is located, provided the consent of th owner of the building can be obtained, and the roof is strong enough to support i weight.

The general appearance of the vane, and the location of the several parts, are show in the illustration herewith. The iron straps which unite the two parts of the foo block will be taken off and the block separated before raising the vane, in order t put the iron socket holding it in proper position. After the vane is up the pieces wi be fastened firmly together again by these straps. The central rod can be lengthene whenever necessary by adding a piece of the same diameter and cutting a screw-thre on both ends.

Where the office is not on the upper floor so that the rod can be brought into th room through the roof, the lower half of the rod will not be attached, but must be stored away for future use. When the office is on the upper floor the central rod will be brought into the room and allowed to project about two inches through the ceiling. The gilded arrow will then be screwed on and a circle drawn around it on the ceiling a little greater in diameter than the arrow. This circle will be divided into the eight points of compass used in the weather-reports, care being taken to get the true meridian as a starting-point.

50. All stations supplied with the standard wind-vane, with the indicator extending through the roof to the office-ceiling, the words "Adjusted to the true meridian" will be printed inside the vane-circle upon the ceiling.

51. When permission cannot be obtained to put up the vane the fact will be reported at once to this office.

The services of a skilled mechanic may be employed, whenever necessary, in erecting this vane.

The packing-box in which the vane is received will be preserved for use in the event of its removal at any future time.

52. The observation of the vane requires more care than is usually given. In winds of considerable strength the vane is never at rest, or fixed in the same direction; it oscillates incessantly, and its oscillations increase in extent with certain winds and with the violence of the wind. In such cases observers must *note the mean* direction between the extremes. When the wind is too light to move the vane, and when it is calm, no direction will be given in the report, but the space will be filled with the proper cipher-word for "Calm." The attention of observers is called to this matter in order to prevent them from recording the direction of the wind when it is calm. The direction of the wind will be designated by the eight principal points of the compass, beginning with the north and moving around by the eastward, and numbered from one to eight respectively. In reporting changes in the *direction* of the wind, the terms *veering* and *backing* will be used. The term *veering* indicates the changing of the wind from N. to E. to S. and so on, while *backing* being the reverse term, indicates that it changes from N. to W. to S. and so on.

The bearings of both vane and anemometer must be kept well and carefully oiled to prevent friction.

RAIN-GAUGE.

53. The rain-gauge will be placed, whenever practicable, with the top of the funnel-shaped collector 12 inches above the surface of the ground, firmly fixed in a vertical position, and protected from the interference of unauthorized persons. It will be examined at the time of making each of the three telegraphic observations, the amount of water it contains carefully measured by means of the graduated rod sent with each gauge, and then emptied and returned to its proper position. When a position at the level of the ground cannot be found with a sufficiently clear exposure, the gauge will be placed on the top of the instrument-room, or roof of the building occupied by the observer, who will measure the height above the ground and report it to this office. The measuring-rod is graduated in inches and tenths of inches, and the proportion between the cylinder and funnel is as ten to one, so that ten inches upon the rod correspond with one inch of actual rain-fall, one inch on the rod to one-tenth of rain, and one-tenth on the rod to one-hundredth of rain. Snow will be melted and then measured and reported in the same manner as rain, but the fact of its being melted snow must be noted under the head of remarks, in the weekly reports, on Form 4.

CLOCK.

54. The clock will be hung upon the interior wall of the room occupied as an office, and at each station will be carefully adjusted to the standard local time.

As it frequently happens that the telegraph time differs slightly from the standard local time, each observer will be careful to note the amount of this difference, in order to avoid confusion in filing his reports. As the time by which the observations are governed must be as nearly accurate as practicable, the observer will endeavor to arrange with the manager of the telegraph to have both clocks run together as a sure means of preventing errors.

55. Immediately after placing his instruments in position, each observer will make out and forward to the Chief Signal-Officer at Washington a full report in writing, stating the kind, size, and position of room selected; the street and number of the building in which the room is situated; the position of each instrument, and height of each above the ground, and also above the bench-mark furnished by this office. In giving the height of the barometer the measurement will be made from the surface of the mercury in the cistern. Whenever the position of any instrument is changed a record will be made of such change, with date and amount of difference in elevation, and the facts reported at once to this office.

In addition to this information, such other facts will be stated as will enable th Chief Signal-Officer to judge of the manner in which this part of the observer's dut has been performed.

56. Observers are cautioned against changing the position of any instrument without good and sufficient cause, and must report every change in elevation of six c more inches.

TOOL-BOX.

57. The following implements for cleaning and repairing instruments will be supplied, neatly packed in a small box, to each station:

Two screw-drivers, one fitting the screws about the cistern, the other those abou the scale of the barometer; a small glass funnel; two porcelain cups, from two to fou inches in diameter; kid-skin, shoemaker's thread, white wax, chamois-leather, a pai of small forceps, a small three-cornered file, and a blow-pipe.

MISCELLANEOUS APPARATUS.

58. *Printing-press for weather-map.*—At stations supplied with a press for printin maps, the following articles, not sent with the press, will be found necessary: A set c type-springs (one for each reporting station) for the rapid justification of the figures one stick, one galley, sponge, brush, lye, sperm-oil, and benzine. All these articles wil be purchased by the observer, except the type-springs, which will be furnished fron this office.

When the Synopsis and Probabilities are printed, (and this should be done whereve there is a press,) a twenty-five-pound font of pica type will be necessary, in additio to the symbols and figures furnished with the press. The Synopsis should be set in measure of twenty-eight ems wide. At stations supplied with the type-springs th figures will not be removed from the plate after each issue, as the work can be don much more rapidly and easily by simply taking out the springs and changing only suc figures as are necessary.

The figures and symbols should, however, be completely removed twice each montl and, with the plate, thoroughly cleaned. The figures can be cleaned daily in the plat by using a sponge moistened with benzine. The type used for the Synopsis should b washed with lye. The ink-roller should be cleaned weekly, or oftener if necessary, an everything pertaining to the press must be kept well cleaned to prevent difficulty.

If stations are added for which the bed-plate has not been pierced, observers wil have the necessary work done, being careful to get the new stations in their prope geographical position.

One copy of the map will be kept on file in the observer's office for reference, and o Saturday of each week a copy of the current issue will be mailed to this office.

59.—INSTRUCTIONS FOR PRINTING AND DISTRIBUTING THE DAILY SYNOPSES AND PROBABILITIES OF THE SIGNAL-SERVICE, UNITED STATES ARMY, ISSUED BY CO-OPERATIO OF THE WAR AND POST-OFFICE DEPARTMENTS.

1. The press used is the Liberty No. 3, and will be supplied to each distributin station from the central office in Washington.

2. The following articles, required for working the press, when not sent with i will be purchased by the observer in charge at the nearest reliable type-foundery, an a bill for the same forwarded to this office for settlement:

1. Composition roller.
2. One oil-can.
3. One mallet.
4. One shooting-stick.
5. One planer.
6. Fifty quoins.
7. Six pieces furniture.
8. One composing-stick.
9. One rule.
10. Ten pounds leads.
11. One lye-brush.
12. One saw.
13. One saw-block.
14. One pound Johnson's ink.

3. The standard kind of type used will be pica condensed, of which one 30-poun font will be purchased by the observer at the nearest type-foundery. The followin electrotypes for use in printing the Synopses and Probabilities will be furnished by th central office:

1. Two official heads.
2. Two official autographs of Chief Signal-Officer.
3. Two "Synopses."
4. Two "Probabilities."

With proper care the type should last two years and the electrotypes one year.

The Synopses and Probabilities will be printed on flat letter-paper furnished from the central office, and timely requisitions will be made for it. Observers will also see that at least one month's supply is kept constantly on hand.

5. The copies printed at all stations will be similar in form, size, and appearance to those printed at the central office, and bear the same time and date.

6. The Synopses and Probabilities will be issued every morning, except on Sundays, and two copies of every issue will be mailed in one wrapper to each post-office on the list furnished the observer from the central office; also two copies to this office regularly each day. They will be delivered at the post-office of the station where printed in time to be sent off with the earliest morning mail leaving the station. The observer-in-charge will ascertain from the postmaster of such office the precise hour at which they must be delivered for this purpose, and will instruct his assistants accordingly by posting up in his own office an order setting forth the time of delivery and name of assistant charged with this duty.

7. One assistant at each station will be charged with the duty of printing the Synopses and Probabilities alone. He will report for duty one hour before the usual time of receiving the Synopses from the telegraph-office, for the purpose of clearing up and distributing the type, cleaning press, and cutting the paper. The average time required for composition will be one hour; and when the form is on the press the sheets must be worked off in time for the mail, the number varying from 500 to 800 per hour.

8. An assistant will be at the telegraph-office at least ten minutes before the usual time of receiving the Synopses from Washington, and will carry it without delay, when received, to the printer. This assistant will remain at the office to fold and mail the Synopses, and will perform his duty promptly and with regularity.

9. The envelopes or wrappers will be addressed by an assistant selected for the legibility and rapidity of his writing. Especial attention must be paid to legibility by the observers to prevent errors and delays in transmitting these reports through the post-office. Whenever practicable, this duty will be performed by the assistant referred to in paragraph 8, and at least one full day's supply will be kept constantly on hand properly addressed.

10. Proper arrangements will be made by the observer in charge to supply promptly the place of any one or more of the assistants who may be absent through sickness or other causes, and to accomplish this he will instruct his other assistants in the various duties provided for in these instructions.

STAMPING MAPS.

60. *Instructions for stamping manifold weather-maps.*—1. Count off from ten to fifteen maps from the top of the book.

2. Place the iron plate under the number counted out, and turn a map down upon it.

3. Place a sheet of carbon-paper smoothly upon this map, and then turn down the next map, on which put another sheet of carbon, and so on alternating carbon and maps until the number to be issued is complete, leaving the last map without carbon upon it, taking care to smooth all when down.

In making three or four maps only a sheet of blotting-paper should be placed next to the iron plate and beneath the lower map.

4. Place the box of stamps at the top of the map, with each die in its proper place, and taking especial care not to allow the hands or mallet to rest on the paper, and thus mark and deface the lower maps.

5. First stamp with the symbol-dies the direction of the wind and state of weather, as indicated by the legend on the maps. Hold the die perpendicular to the map and strike it hard enough to make the impression go through all the maps without cutting the upper one. The actual amount of force required can only be learned by practice.

6. After the weather use the figure dies, taking care that the figures for one station do not interfere with those of any other. Stamp the first two figures (thermometer) close together, the next two (barometer, 29 or 30) one-eighth of an inch from the first pair, the last two of the barometer following closely. The last of the figures (velocity of the wind) are to be separated one-eighth of an inch from those for the barometer. Great care must be taken to make the figures neat and regular in appearance, and to stamp them so they can be read without difficulty.

7. After the maps are properly stamped write with the stylus in head-line the name of station, day of week, date, and time of report, thus: "Washington, D. C., Saturday, April 20, 1872, 7.35 a. m."

WATER-GAUGE.

61. No definite form of water-gauge has been adopted, owing to the difficulty of getting one at a reasonable cost that would be adapted to the essentially different circumstances under which it must be used at the several river-stations. The following

description of a simple form of gauge may be useful in localities where it is difficult to get one of more scientific construction, or to be used as a temporary substitute for the latter in cases of emergency:

Take a piece of pine scantling, from 1¼ to 1½ inches in thickness, and from 5 to 6 inches in breadth; the length varying according to the depth of the water where it is to be used.

Having planed the scantling smooth, give it a heavy coat of white zinc paint, and after the paint is dry divide the scantling into feet and tenths of feet with a rule and lead-pencil.

With a small brush paint the tenths of feet black, except the center and initial ones of each foot, which will be painted red and in heavier lines than the intermediate ones, thus:

Indicate each foot, with its proper number, in plain figures marked on the white surface just above the triangle.

Having thus marked the staff up to a sufficient height to insure getting the maximum high water, select a pile, or other stationary object, in some portion of the levee or wharf where the staff will be secure from being damaged or defaced by coming into contact with vessels, and where it will not be left dry by the tide. Lower the staff into the water, taking care to keep it in a vertical position until it touches the bed of the river, and then secure it to the pile by spikes.

It would be well, in selecting a place for fixing the staff, to take the angle of a pier, and having fastened a smooth piece of scantling, about the size of the staff, on the side of the pile, secure the staff to this.

When the gauge is in an exposed place, liable to be washed by the waves, advantage should be taken of the first low water to secure it from being displaced, by driving in additional spikes, or lashing it with strong cords to the pile.

Care must be taken in reading the staff when the water is rough to get the mean of the rise and fall of the waves. It would be well, after securing the staff, to determine some point of reference, so that in case it should be destroyed another one could be put up at the same height. This may be done by taking and marking some given point in the vicinity, a pile or a rock, at any given height of the water. Thus, by driving a spike or drilling a hole, and recording the height of the water, as read from the staff at the time, you have a "bench-mark," or point of reference, by which to set up another staff. It would be necessary in doing this to make a sketch of the place, giving the location of the staff and the point of reference; noting the local names of the surrounding points so that any other person could find the place from the description.

62. Observers, in publishing their local river-reports, will give, in addition to the changes in past twenty-four hours, the height of water above or below some fixed point known and used by steamboat-men and other interested parties.

63. The river observations must be made and reported with as much care, regularity, and accuracy as those of the barometer, and where the observer is compelled by pressure of other duties to intrust this part of his work to an issistant, he must assure himself by frequent personal inspection that it is faithfully and honestly done.

SIGNAL APPARATUS.

64. Stations ordered to display cautionary signals will be supplied with two (or more) red flags, one 6 feet and the other 8 feet square, having square *black* centers one-third the size of the flag; one red signal-lantern; one large flag-staff, and two sets of small staffs for use in cases of emergency. The large flag-staff must be from 25 to 30 feet in height, and so situated as to be clearly visible from as large a part as possible of the harbor and shipping it is designed to warn of approaching danger. The staff will be provided with halyards for raising and lowering the flags and lantern, and will be erected on the roof of some building, preferably on the one in which the office is located, unless a more desirable position is found near the office.

Everything connected with the signal apparatus must be kept in perfect order; flags mended when torn, ties sewed on, halyards renewed, lanterns constantly filled and trimmed, and the approaches to the staff convenient so that there may be no delay in obeying all orders to hoist or lower signals.

65. Timely requisition must be made upon this office for new articles of equipment when those in use are likely to become unserviceable.

SIGNAL-ORDERS.

66. Signals will be ordered up by telegraph from this office in the words "Up signals," and will be ordered down in the words "Signals down." Signals will remain displayed until the order to lower them is received from this office, unless telegraphic communica-

Form A.—Record of telegrams refused by telegraph companies.

Form B.—Record of telegrams sent and received.

72. Form 1 is used by the special river-observers for their reports, which should be made in duplicate; one copy for file in the telegraph-office at the schedule times and the other to be forwarded to this office at the end of each week.

73. Form 2 is for the use of the telegraph-operators in receiving the reports from other stations, and will be furnished by the observers in such quantities as may be required, care being taken to guard against wasteful and unnecessary use. The spaces will be filled up in regular order, commencing at the upper left-hand space and filling each space to the right in succession on the first line, and then commencing at the left-hand space of the second line, and so on until each space is filled. Obsevers will require the receiving operators to sign and date each sheet, and also to note the time the reports upon it were received, before taking it from the telegraph-office. When the reports are received in duplicate by the operator, observers will retain the original sheets furnished them by this office.

After the reports are transferred to the bulletin the receiving sheets for each full report will be placed together and folded neatly in three folds parallel with the writing.

Each morning the three reports of the preceding day will be secured together so as to form a single package. At the end of each week the seven daily packages of the week will be put up in a neat package and forwarded by mail to this office, accompanied by the error-sheet.

74. Form 3 is the Daily Bulletin, issued for public information. The several columns will be filled up from the receiving sheet, the words and figures being written plainly and distinctly.

Before making any entries upon the manifold form, the sheets will be carefully smoothed down so that the registered lines of the several stations will fall directly over each other. If more than fifteen bulletins are to be written it is better to make out the number in two equal parts than to try and write them all at once, in order that the copies may all be legible.

One copy of the morning issue of the Saturday Bulletin will be mailed to this office from each station.

The headings of the different columns indicate with sufficient clearness the matter to be filled in.

When any part of a report is not received, or, if received, is evidently incorrect, the word "blank" will be written in the spaces to be filled by such part.

Absence of wind, pressure of wind, clouds, rain-fall, or change in barometer, thermometer, and river, will be indicated by the figure zero.

New stations, whose names are not in the printed list, will be written in the blank lines at bottom of the form.

The following data will be given on all Forms 3 posted:

"Posted in..

at...................... M...

(Signed)..

Observer."

In the first blank space will be written the name of the locality where posted; in the second space, the *time*; and in the third space, the *date* of posting.

Each bulletin will be signed with the full name of the observer.

75. Form 4 is the weekly report, and three copies will be forwarded to this office at the end of each week; one copy containing the full record of the telegraphic series of observations, one the record of the local series, and the third that of the mid-day observations. In filling up this form the *daily* means of the *local* (7.2 and 9 o'clock) and the *weekly* means of the *telegraphic* barometric and thermometric observations will be entered in their proper columns, and the words "daily" and "weekly" respectively added to the heading.

In the telegraphic series will be given, firstly, the mean of the morning; secondly that of the afternoon; and thirdly, that of the midnight observations.

76. Form 5 will be used for all of the telegraphic reports, and will be made out each time in duplicate, one copy for deposit in the telegraph-office, for transmission by telegraph to this office, and the other for transmission by mail to the same place. Both copies must be filled up and signed in the manner indicated upon the form itself.

Each regular report will consist of *ten* words, arranged in two lines of *five* words each. At all stations designated by this office as *river* stations, the afternoon report will consist of *twelve* words, arranged in two lines of *six* words each.

The sixth space in first line of Form 5 will be used for the depth in feet above or below the established bench-mark whenever it exceeds eight feet, and the sixth space in second line for the odd inches.

Form A.—Record of telegrams refused by telegraph companies.
Form B.—Record of telegrams sent and received.

72. Form 1 is used by the special river-observers for their reports, which should be made in duplicate; one copy for file in the telegraph-office at the schedule times and the other to be forwarded to this office at the end of each week.

73. Form 2 is for the use of the telegraph-operators in receiving the reports from other stations, and will be furnished by the observers in such quantities as may be required, care being taken to guard against wasteful and unnecessary use. The spaces will be filled up in regular order, commencing at the upper left-hand space and filling each space to the right in succession on the first line, and then commencing at the left-hand space of the second line, and so on until each space is filled. Obsevers will require the receiving operators to sign and date each sheet, and also to note the time the reports upon it were received, before taking it from the telegraph-office. When the reports are received in duplicate by the operator, observers will retain the original sheets furnished them by this office.

After the reports are transferred to the bulletin the receiving sheets for each full report will be placed together and folded neatly in three folds parallel with the writing.

Each morning the three reports of the preceding day will be secured together so as to form a single package. At the end of each week the seven daily packages of the week will be put up in a neat package and forwarded by mail to this office, accompanied by the error-sheet.

74. Form 3 is the Daily Bulletin, issued for public information. The several columns will be filled up from the receiving sheet, the words and figures being written plainly and distinctly.

Before making any entries upon the manifold form, the sheets will be carefully smoothed down so that the registered lines of the several stations will fall directly over each other. If more than fifteen bulletins are to be written it is better to make out the number in two equal parts than to try and write them all at once, in order that the copies may all be legible.

One copy of the morning issue of the Saturday Bulletin will be mailed to this office from each station.

The headings of the different columns indicate with sufficient clearness the matter to be filled in.

When any part of a report is not received, or, if received, is evidently incorrect, the word "blank" will be written in the spaces to be filled by such part.

Absence of wind, pressure of wind, clouds, rain-fall, or change in barometer, thermometer, and river, will be indicated by the figure zero.

New stations, whose names are not in the printed list, will be written in the blank lines at bottom of the form.

The following data will be given on all Forms 3 posted:

"Posted in..

at...................... M ....

(Signed)..

Observer."

In the first blank space will be written the name of the locality where posted; in the second space, the *time;* and in the third space, the *date* of posting.

Each bulletin will be signed with the full name of the observer.

75. Form 4 is the weekly report, and three copies will be forwarded to this office at the end of each week; one copy containing the full record of the telegraphic series of observations, one the record of the local series, and the third that of the mid-day observations. In filling up this form the *daily* means of the *local* (7.2 and 9 o'clock) and the *weekly* means of the *telegraphic* barometric and thermometric observations will be entered in their proper columns, and the words "daily" and "weekly" respectively added to the heading.

In the telegraphic series will be given, firstly, the mean of the morning; secondly, that of the afternoon; and thirdly, that of the midnight observations.

76. Form 5 will be used for all of the telegraphic reports, and will be made out each time in duplicate, one copy for deposit in the telegraph-office, for transmission by telegraph to this office, and the other for transmission by mail to the same place. Both copies must be filled up and signed in the manner indicated upon the form itself.

Each regular report will consist of *ten* words, arranged in two lines of *five* words each. At all stations designated by this office as *river* stations, the afternoon report will consist of *twelve* words, arranged in two lines of *six* words each.

The sixth space in first line of Form 5 will be used for the depth in feet above or below the established bench-mark whenever it exceeds eight feet, and the sixth space in second line for the odd inches.

Whenever the depth does not exceed eight feet, the word "River" will be used to fill the space in first line, and the whole depth given in the second line in inches.

In furnishing the reports to the press, and in filling up the bulletin, Form 3, the daily change only will be given, as at present. This change will be obtained by taking the difference between the current report and that of the preceding day.

In filling up the form, the first space of the first line will be used for *name of station*, the second for *date* and *time* of report, the third for barometer, the fourth for thermometer, and the fifth for humidity. In the second line the first space will be used for state of weather, the second for velocity of wind, the third for upper clouds, the fourth for lower clouds, and the fifth for rain-fall. The cipher-words must, in all cases, be written plainly and correctly. The word "Blank" will be used when, from any cause, an observation is not taken.

The duplicate copies of the report for each day will be mailed weekly to this office from all stations.

77. Form 6 is a memorandum-receipt for property, and will be filled up with the number and kind of articles received, signed, dated, and transmitted promptly to this office.

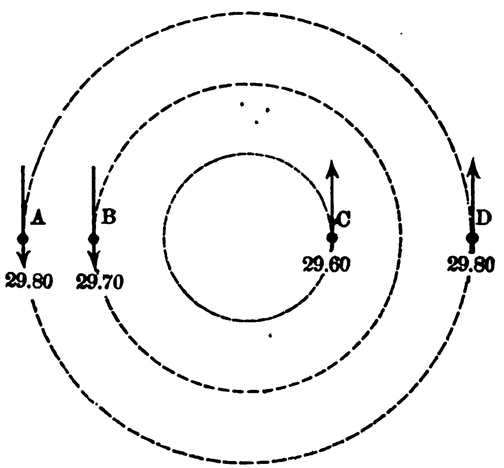
Detailed instructions in reference to this form will be given under the head of "Property."

78. Form 8 is the weather-map, to be printed or made out in manifold, as may be directed from this office, and shows the direction of the wind, state of weather, height of barometer, height of thermometer, and velocity of wind at each station. The arrow is always to fly *with* the wind, and *not toward* it like a vane. In printing or stamping these maps great care must be exercised to make the figures and different signs correctly and distinctly. Observers must never allow imperfect or illegible maps to leave their offices. To insure accuracy, the printed maps, before being issued, must be carefully compared with the reports received, and, if errors are found, they will be corrected on the map, if the corrections can be made without disfiguring it, and without rendering it illegible. If they cannot be so corrected, the whole edition will be destroyed, as it is better not to issue any map than one which is imperfect. One copy of this map will be sent to this office on Saturday of each week, unless special instructions are received to the contrary by the observer from proper authority.

79. Observers are authorized to trace upon these maps *isobars* or lines of equal barometric pressure, in accordance with the following directions:

1st. Ascertain by a general examination of the reports, after they are entered on the map, whether any of the lines of equal pressure will, when drawn, traverse a large portion of the map, and, if this is found to be the case, these long lines will be drawn first. The lines of 29.90, 30.00, and 30.10, on the map, opposite page 12 of the circular issued by this office, on the Practical Use of Meteorological Reports and Weather-Maps, are illustrations of this principal isobar or *base-line*.

2d. If decided differences in barometric readings are observed to exist between neighboring stations, enter upon the map with a red lead-pencil little dots or dashes, intermediate between any two of them, to represent the points at which the barometric reading would be exactly 29.50, 29.60, &c., or 30.00, 30.10, &c., supposing the pressure to change uniformly in the space between the two stations. The precise position of these intermediate points can usually be found with sufficient exactness by estimation with the eye.



The interpolated isobars—that is, those which are drawn between stations, as in the preceding paragraph—cannot be relied upon as perfectly accurate, but the amount of error need not exceed two-hundredths of an inch in the position of any one line, if proper attention is paid to the following points: *First.* The isobars must not be extended west of the one hundredth degree of longitude west of Greenwich, (or the meridian twenty-three degrees west of Washington,) as the barometric readings of very elevated stations cannot at present be combined with those of an altitude of fifteen hundred feet or less. *Second.* The barometrical readings reported from Mount Washington must not be used in drawing the isobars over the New England States. *Third.* Certain allowances or corrections must be made for the readings reported from several stations whose elevation is not yet accurately determined. These corrections will be furnished from this office upon application.

When a sufficient number of dots or dashes have been made to enable the observer to trace the course of one or two of the principal isobars, they will be joined together by a curved line passing through, or nearly through, all of them, without following any of the minor irregularities that would be possibly caused by slight errors in the interpolations.

Any perplexity that may arise in drawing these lines, as to their proper route, may generally be removed by considering the direction of the wind, as reported from each station. Thus, if from stations A, B, C, and D reports are received as shown in the figure, it would be seen at once that between B and C there was a central area of low pressure around which the wind circulated in the direction indicated by the arrows, and the isobars would therefore be drawn as shown by the dotted lines.

When the lines are very much crowded together, as happens in a few severe storms, the isobars may be drawn for every two-tenths of an inch, instead of every one-tenth.

Each isobar should be plainly marked at its extremities with the figures indicating the corresponding pressure, and the central areas of highest and lowest pressure should be marked "high" and "low," respectively, unless by so doing the appearance of the map would be injured by the complication of the lines.

When the observer has any doubt as to the course of a given isobar, he should omit it entirely, or simply indicate its probable position by a broken instead of a full red line. Observers will forward to this office weekly examples of their isobaric maps, and will not post them in any public place until officially authorized to do so.

80. Form 15 is for the Synopsis and Probabilities, and a copy properly filled will be posted with each bulletin at all stations where they are received. The midnight synopsis will be used with the morning bulletin, and the morning synopsis with the afternoon bulletin, whenever practicable. At stations where the afternoon and not the midnight synopsis is received, this will be used with the bulletin of the next morning.

In all cases the time and date of issue from Washington must be plainly written upon the form.

81. When observers are compelled to copy reports from the newspapers, and time and date are not given, they will call the especial attention of the publishers of such papers to the omission and have it corrected, when possible, as a matter of justice to this office and to their readers.

82. Form 16 is the blank meteorological chart to be made out monthly at each station, and forwarded by mail to this office as soon after the close of each month as practicable.

The following instructions, taken in connection with the illustration given in the annual report of the Chief Signal-Officer for 1871, will enable observers to make them out properly:

For the thermometer, take the weekly reports on Form 4, beginning with the morning report of the first day of the month; with a sharp pencil make a dot on the chart at the height at which the dry-bulb thermometer stood at 7 a. m., (or the first observation,) at its 7. a. m. relative distance from the 12 m. line, as shown in the illustration referred to. Do the same with each of the six observations. Join these dots with the pencil and afterwards trace with ink.

Continue the same way with the wet-bulb thermometer, barometer, velocity of the wind, and the relative humidity, marking the direction of the wind in small letters opposite each observation.

The average amount of clouds for each day will be given in the spaces immediately above the 29.00 inch line in the chart dividing the squares into 1, 2, 3, and 4-4ths, respectively.

The dark lines for rain are placed with the right edge at the point where the rain ceased.

The scale may be changed for a greater fall of rain than 1¼ inches, or a greater velocity of wind than thirty-five miles per hour.

Different colored ink may be used for the several lines, if preferred.

In forwarding these charts by mail they should never be folded, but rolled neatly and compactly without any central core. As they are intended for future reference care should be taken in making them out accurately and neatly.

83. Form 19 is the error-sheet, which accompanies the weekly packages of Form 2 sent by observers to this office. It will be filled up in the following manner:

In the third column will be entered the official numbers of all regular reports missing when the telegraphic circuits are closed. In the fourth, fifth, and sixth columns will be entered, on the same line under appropriate headings, the numbers of all reports of previous dates which may have been received during the time designated at the left-hand of the form. In the seventh column the time the last report was received will be noted. Receipt of duplicates, corrections, and reports not in schedules, causes of delay, &c., will be noted in the column headed "Remarks." The number of words must include all reports due at the station which may have been received up to the time the circuits were closed, whether they were of the current or previous dates. Duplicates and corrections are not to be counted. *Each line of the form must contain a complete record of the work for the date and time specified.* The record will be made up from Form 2 immediately after each report.

84. In filling up Forms 19 and B, the following-named stations will be designated by the letters placed opposite each name:

Booneville	A.	Lexington	K.
Brownsville	B.	Little Rock	L.
Brunswick	C.	Marietta	M.
Confluence	D.	Morgantown	N.
Evansville	E.	New Geneva	O.
Freeport	F.	Oil City	P.
Hermann	G.	Paducah	Q.
Jefferson City	H.	Plattsmouth	R.
Kansas City	I.	Saint Joseph	S.
Le Claire	J.	Warsaw	T.

85. Form 22 is used for the record of the daily and monthly means of the barometer and thermometer, with the prevailing direction of the wind and amount of rain-fall for the month. In filling up this form the means of the barometer and thermometer for the local series of observations will be obtained by dividing the sum of the 7 a. m., 2 p. m., and *double* the 9 p. m. observations, by four. Manifold copies of this form, properly filled up, will, at the end of each month, be furnished by observers to as many of the newspapers and other periodicals published at their stations as may desire to make use of it. One copy will also be forwarded to this office on the first day of the month succeeding that of which it forms the record.

86. Each observer will rule out, on heavy white paper, a blank form similar to the one given below, and post it up in a conspicuous place in his office. On this form he will enter, on the first day of each month, the data for the preceding month indicated at the top of the several columns in the form.

Date.																						and melted snow.		
		Mean of—			Range.				Mean of—			- Range.				Number of miles.								
	Mean.	A. M. observation.	P. M. observation.	Night observation.	Highest.	Lowest.	Difference.	Mean.	A. M. observation.	P. M. observation.	Night observation.	Maximum.	Minimum.	Difference. Station ——,

—— ——, *Observer.*

87. The weekly mean of the telegraphic observations of the barometer and thermometer will be obtained in the following manner: Divide the sum of the a. m. telegraphic observations by the number of observations, and the quotient will be the mean of the morning observations; proceed in the same manner for the afternoon and night observations, and enter the quotients separately under the head of "Remarks," on Form 4.

The monthly mean of the telegraphic observations will be obtained in the same manner.

The local observations made at 7 a. m., 2 p. m., and 9 p. m. will not be used in getting this mean.

ILLUSTRATIONS.

Barometer; telegraphic observations, 7.35 *a. m.*, 4.35 *p. m.*, *and* 11.35 *p. m.*, *Washington mean time.*

A. M.	P. M.	Midnight.

30.6	43.8	36.5

Mean of a. m. observation	30.6
Mean of p. m. observation	43.8
Mean of midnight observation	36.5

88. In calculating the mean of the thermometer readings at low temperature, the following rule will be observed:

"When minus readings occur, the difference between the sum of the positive and the sum of the negative numbers is to be taken. This difference, which is the total sum, has the sign of the greater of the two partial sums, and will be divided by the total number of observations."

The quotient obtained by this division will be the mean sought.

The following are examples:

Example 1.

	+ 70
	+ 50
	+ 20
	0
Sum of positive	+ 140
Sum of negative	0
Total sum	+ 140
Number of observations	4
Mean	+ 35

Example 2.

	0
	0
	0
Sum of positive	0
Sum of negative	— 5
Total sum	— 5
Number of observations	6
Mean	— 0.8

89. Form 23 is for use at stations designated for the display of cautionary signals, and will be filled up and forwarded weekly to this office during the period signals are ordered. Under the head of "Remarks" will be recorded the highest velocity reached by the wind during the time the signals were displayed.

When no signals have been ordered during the week, this form must be forwarded and show, under the head of "Remarks," the highest velocity attained by the wind during the week.

Form 24 is the weekly report of the number of bulletins, maps, &c., issued at each station, and will be forwarded to this office in the same envelope with the other regular weekly reports.

All publications that have been issued at any station during each week will be reported on this form, and if special publications are made in addition to those noted in the heading of the several columns of the form, observers will rule additional columns for such publications.

90. Form 25 is the one upon which all official telegrams to this office must be written. As everything transmitted is charged for, unnecessary words must be avoided. The full date and time of filing message will be written *above* the upper heavy line, while only the name of the city and the day of the month will be written below. The signature must contain only the surname of the sender and the word "Observer." Only the matter written between the heavy lines is to be transmitted.

91. Form "A" will be filled up properly and carefully under each heading, and mailed on Monday of each week to this office. In the column headed "Nature of message," will be indicated *briefly* whether the message rendered was a weather-report or ordinary message, and in the column of "Remarks" give such additional information as you may think necessary to a full understanding of each case.

This form will be sent in blank if no messages have been refused.

92. Form "B" will be forwarded promptly to this office at the end of each week, using but one form, except in cases where it is necessary to use more to complete the record, taking great care to keep a correct record of number of telegrams sent or received. In case there should have been no telegrams received or sent during the week, the form will be sent in blank. All telegrams must be properly dated and signed.

BOOKS OF REFERENCE AND RECORD.

93. The following books of reference and record will be furnished by this office to each station:

For reference.—Guyot's Meteorological Tables; Buchan's Handy Book of Meteorology; Loomis's Treatise on Meteorology; Myer's Manual of Signals; Piddington's Horn Book; Manual of Military Telegraphy; Annual Reports of the Chief Signal-Officer; Practical Use of Meteorological Reports and Weather-Maps; Instructions to Observer-Sergeants, Signal-Service, U. S. A.; Smithsonian Directions for Meteorological Observations.

For Records.—Journal; Daily Record of Observations; Record of Bulletins; Record of Letters Sent; Record of Letters Received; Index to Letters Sent and Received; Original Record of Observations; Weather-Map of the United States.

94. In the journal will be entered daily all matters of interest not provided for in the various forms, such as meteoric and auroral displays, earthquakes, and unusual atmospheric appearances and disturbances, giving in all cases, when possible, the time of beginning and duration of each. Especially will the observer enter a detailed account of the characteristic phenomena of every serious storm that passes over or near his station. In this book will also be noted all changes in location of office or instruments, the condition of the instruments, and when damaged in any way the cause will be stated. A monthly abstract of the entries in the journal will be forwarded to the Chief Signal-Officer within five days after the expiration of each month. This abstract must contain all the important entries of the journal, the condition of all in-

struments in use on station, and also the comparative readings of the barometer referred to in paragraph 31.

95. Observer-sergeants will be particular to note every display of aurora, seeking by inquiry of others, if necessary, to make their record complete.

If the heavens are obscured by clouds so that the aurora, if present, cannot be observed, the word "obscured" will be entered in that part of the record devoted to auroral displays. If the sky is sufficiently clear for observation, the words "aurora" or "no aurora" will be entered according as one is visible or not. When observed, a full account of the phenomenon will be entered in the journal, showing the exact minute of beginning and ending of the aurora, and the principal phases of changes that it experiences. The following particulars should be especially noted: the azimuth and altitude of each extremity and of the crown of any arch of light, and the same data for any corona or glory that may be formed.

When the observer is familiar with the names of the principal fixed stars, he may locate the arch or crown by reference to them, but it is preferable that he should observe directly the altitude and azimuth.

Altitudes are expressed by degrees from the horizon to the zenith. If any circle be divided into the 360 parts and radial lines connect these parts with the center, each pair of lines subtend an angle of one degree; the fourth part of the circle will subtend an angle of ninety degrees or one right angle, and the corresponding radii are perpendicular to each other; thus the zenith (that point in the heavens immediately above the observer) is ninety degrees from the horizon, or, in other words, its altitude is 90°.

A point half way up from the horizon to the zenith has an altitude of 45°.

Azimuths are also expressed in degrees but are measured on the horizontal plane, and will be recorded as is done in astronomy, from the south point to the westward, passing successively the west, north, and east points of compass until 360° have been passed over and the south point is again reached.

Observers must be particular as to the date of the aurora, and when it begins in the evening of one day and continues into the early morning of the next day, it will be entered as occuring on the *first* day, but its details will be given in the record as occurring between the hours of its actual beginning and ending. Thus, an aurora that began on the evening of the 12th of January, and continued until the early morning of the 13th, would be entered as the aurora of the 12th, but its details would be recorded as occurring, for instance, between the hours of 10 p. m. of January 12, and 2 a. m. of January 13.

All entries in the journal of occurrences and observations of any one day will be made under or opposite to that day, and not be entered as a subsequent date as is frequently done. For example: an auroral display ocurring May 23, should be entered opposite that date, and not referred to on the 24th, as having occured "last evening."

Observers must pay particular attention to accuracy in the use of the terms "morning" and "evening," and will be governed by the following instructions in reference to them:

Midnight is the moment 12h. 00m. 00s., and is the beginning or first moment of the new day and should receive the date of that day. Thus, whatever happened in the afternoon of June 10, at 11h. 59m. 59s. happened at 11h. 59m. 59s. p. m., June 10; whatever happened one second later was at midnight of June 10 and 11, and at one second later still at 12h. 00m. 01s. a. m. of June 11; at midday of same date whatever happened at 11h. 59m. 59s. happened at 11h. 59m. 59s. a. m., June 11; at one second later it was noon June 11; at one second later still it was 12h. 00m. 01s. p. m., June 11.

96. The daily record of observations will be an exact copy of Form 4, and filled up in the same manner. The several series of observations can be entered in the same book, care being taken to date and time them properly. The telegraphic series may be entered in the beginning of the book, and the local series at the end, while the midday reports may follow either of the two.

97. The record of bulletins will be filled up regularly from the daily bulletins, of which it is a copy.

On stations where telegraphic reports from other stations are not received, or where such reports do not exceed nine in number, a whole page in the bulletin-book will *not* be used in entering each bulletin. To economize space, the reports will be entered in the same order as at present, but as many days will be written upon each double page as the space will allow; each day being distinguished by a proper heading as to date, and separated from the preceding one by a red-ink line.

Wherever necessary, the printed names of stations will be ruled out, and those from which reports are received written in red ink, in the blank spaces between the original names, and in regular order.

98. In the books of "Letters sent" and "Letters received" will be entered all letters sent, and an abstract of all those received relating to the official business of the station. The original letters received will be properly briefed and numbered, and filed away for reference. In the book of "Letters received" will be entered a record of all official letters and telegrams received at the station.

99. All communications on letter-paper will be folded in three equal parts from the

bottom to the top; and if written on different sized paper, will be folded in such manner as to conform to the above size. All communications will be entered in the order of their receipt and numbered continuously, beginning at one on January 1 of each year, (or at the date of the receipt of the first letter, when a station is opened during the year,) and each letter will be known by this number in all references made to it in the office-records. Inclosures to letters will not be indorsed, but simply numbered, in red ink, as "Inclosure No.—" to said letter. On the top of the first fold will be entered, in red ink, the number of the letter, the station, and the year. This will be followed by the following entries in black ink:

1st. The place where written and date.

2d. Name and official designation of writer or department or office from which it is written.

3d. A brief synopsis showing the general purport of the letter. In this synopsis or brief everything of importance in the letter will be concisely stated.

Following this will be given in red ink the number of inclosures if any, in the letter, and such references as may be necessary to show where other letters connected with it can be found in the records. At the bottom also in red ink the date at which the communication is received will be entered, (see Examples A and B.) If the communication is received by telegraph the word "telegram" will be written in red ink immediately below the brief.

The following illustration shows the manner of entering letters in the record:

LETTERS RECEIVED.

When received.	Name of writer.	Date and purport of letter.
April 17, 1873 **90**	Office Chief Signal-Officer, by First Lieut. H. Jackson.	Washington, April 12, 1873, directs that one stylus, dropped from return for 1st qr., be taken up and correction made on retained copy. **Retained return corrected April 17, 1873.** **(Number of letter and indorsed action in red ink.)**
April 19, 1873 **94**	Office Chief Signal-Officer, by Capt. H. W. Howgate. **(One inclosure.)**	Washington, April 12, 1873, directs that a weather-map be daily furnished to James R. Stone, Racine, Wis., as requested by Louis Decker. **Delivery of map commenced April 20, 1873.** **See L. S., Vol. 1, page 59.**

One or more lines will always be left below the brief for noting, as shown in the illustration, any action taken in consequence of said letter, as well as the entry-marks of any letters, either received or sent, especially connected with it. In these references letters received are referred to by number and year, and letters sent, by volume and page.

In case the letter received is to be returned with an indorsement, such indorsement will be entered in full in the space immediately below the brief, and two additional lines will then be left in which to note any future action.

LETTERS SENT.

In this book will be entered all communications sent from the office by letter or telegram, excepting only such indorsements as are entered in "Letters received," in accordance with the instructions contained in the preceding paragraph. All proper names appearing in the body of the letter will be underlined with red ink. In the margin will be given in red ink the entry-marks of any letter, either received or sent in connection therewith, letters received being referred to by number and year, letters sent by volume and page. Exact copies of all telegrams sent will be entered in full, and marked "Telegram" in red ink. The following illustration of the manner of entering letters sent will show the manner in which the several notes are made. [The words and figures in brackets indicate red ink.]

[6] [LETTERS SENT.] [59]

"MILWAUKEE, WIS., *May* 3, 1873.

"To the CHIEF SIGNAL-OFFICER OF THE ARMY:

[L. R. 94. Milwaukee, 1873.] "GENERAL: I have to advise you that I am verbally informed by Mr. Louis Decker that Mr. J. R. Stone, of Racine, Wis., has removed to Oregon, and that in consequence I have this day discontinued the map ordered by communication from your office under date of April 12, 1873.

"I am, respectfully, yours,

"H. M. LUDWIG,
"*Observer-Sergeant, Signal-Service, U. S. A.*"

NOTE.—In case any other letters had passed in this connection, the entry-marks would be entered in the margin.

In letters received, each proper name will be followed by the number of the letter in which it is to be found; if it is the written name it will be entered in black ink, otherwise in red ink. In letters sent, the proper names will be followed by the number of the page on which the letter containing the name is to be found; if it is the signature of the person writing the letter, it will be entered in black ink, otherwise in red ink. Each name will be entered but once and the numbers will follow it successively, as follows:

"Office Chief Signal-Officer, 1, 3, 4, 8, 10, &c.
"Wind-vane, 3, 10, 29.
"Wentworth, H. W., 18-24-26."

INDEXING.

The alphabetical index-book furnished the observers from this office will be kept up regularly from day to day in connection with the books of letters sent and received, and must show the names in proper order of all official correspondents of the observer, with references to volume and page where their communications appear.

General orders, special orders, and circulars, will be filed away separately, and in such manner that they can be found readily, and will be roughly bound by the observer at the end of each year. General orders and circulars will be indorsed in red ink at the bottom of the first page, with the name of station and date of receipt, as follows:

"Received (Milwaukee,) ————, 187—."

Spare maps and bulletins will be neatly folded in letter size and tied up in packages containing a month's issue and filed away where they will be easily accessible.

Example A.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS
FOR THE BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., April 12, 1873.

Observer-Sergeant H. M. LUDWIG, U. S. A.,
Milwaukee, Wis.:

SERGEANT: Inclosed herewith is a copy of a letter from Louis Decker requesting that a weather-map be daily furnished to Mr. James R. Stone, Racine, Wis. You will place Mr. Stone's name upon your list and comply with his request.

Very respectfully, &c.,

H. W. HOWGATE,
Second Lieut. and Bvt. Capt., U. S. A., A. S. O. and Assistant.

94. MILWAUKEE. 1873.

WASHINGTON, April 12, 1873

Office of Chief Signal-Officer,
by
Capt. H. W. Howgate.

Directs that a weather-map be daily furnished to Mr. J. R. Stone, Racine, Wis., as requested by Mr. Louis Decker.

(One Inclosure.)
See L. S., Vol. 1, page 59.

Received Milwaukee, Apr. 19, 1873.

Explanation.

All office marks in red ink, brief in black ink. "L. S., vol. 1, page 59," refers to letter subsequently written in regard to this map.

Example B.

WAR DEPARTMENT, OFFICE OF THE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS
FOR THE BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., April 12, 1873.

Observer-Sergeant H. M. LUDWIG,
Milwaukee, Wis.:

SERGEANT: I have to inform you that one stylus dropped by you from your property return for first quarter, 1873, must be taken up until inspected and condemned by proper authority. You will make the necessary correction in the retained property-return for that quarter.

Respectfully, yours,

H. JACKSON,
First Lieut. Seventh Cav., P. & D. O.

90. MILWAUKEE. 1873.

WASHINGTON, April 12, 1873.

Office of Chief Signal-Officer,

by

1 Lt. Henry Jackson.

Directs that one stylus, dropped from return for 1st Qr., '73, be taken up and correction made on retained copy.

Received April 17, 1873.

(Copy.)

MILWAUKEE, WIS., *April* 9, 1873.

To the CHIEF SIGNAL-OFFICER OF THE ARMY:

SIR: I have the honor to request that the observer-sergeant in charge of the station in this city be directed to furnish a weather-map daily to Mr. James R. Stone, Racine, Wis.

Respectfully, yours,

LOUIS DECKER.

94. MILWAUKEE. 1873.

(In red ink.)

Inclosure No. 1.

(In red ink.)

Letters transmitting checks for pay of observers are not merely personal, but must be carefully entered and preserved.

The receipts for pay should be copied in "Letters sent." Great care should be taken to specify the amount of any bills forwarded in a letter, and also to note the date of all payments, under the brief of the letter, in the record-book containing the remittance.

100. The large weather-map of the United States will be hung up in the principal room of the board of trade, or chamber of commerce, or both, and the state of the weather will be shown upon it in the manner already described, as soon after the receipt of the morning report as is practicable.

101. All books of reference and record must have the name of the station to which they belong plainly written on the fly-leaf.

GENERAL INSTRUCTIONS.

102. Each observer in charge of a station not supplied with an assistant from this office will, as soon as practicable after arriving at his station, make arrangements with some competent person to perform his duties in case of sickness or disability. The person so selected must be carefully instructed in the use and care of the several instruments, in the manner of taking the observations, of making out and forwarding the weather-reports sent from the station, and the proper disposition of those received from other stations. His name and regular post-office address will be reported to this office as soon as the selection is made. The employment of this assistant will be temporary only, and he will be paid at the end of each month in which the services were rendered, at the rate of compensation fixed by the Chief Signal-Officer, on forwarding the proper vouchers to this office, with a certificate from the observer-sergeant stating the number of days employed, with the dates in each case.

103. In case of sickness or disability rendering an observer or assistant observer incapable of performing his duties, the observer in charge will report the fact by telegraph to the Chief Signal-Officer, and will forward by mail the certificate of his attending physician.

104. At stations where there is no medical officer a resident practitioner will be employed, whose account, made out in duplicate, on the form given below, together with the prescriptions when medicines have been required, will be transmitted for payment to the Surgeon-General of the Army, through the office of the Chief Signal-Officer, Washington, D. C.

105. No account of a resident practitioner other than a medical officer of the Army at any of the stations mentioned can be paid unless it shall clearly appear that the assistance of the medical officer designated could not be obtained in the special case. Should the medical officer be temporarily inaccessible upon the occurrence of a case so sudden and serious as to require immediate attention, he will nevertheless be called upon as soon as possible, and his certificate that the case required another practitioner to be employed under the circumstances will be necessary before the account of the latter can be paid.

106. An enlisted man obtaining medical assistance or medicines from other sources than a medical officer of the Army, when the latter can be called upon, will be personally responsible for the account therefor, such not being authorized by the United States.

107. Bills for articles of food, or diet of any kind, liquors, wines, mineral waters, patent or proprietary medicines; instruments or appliances, such as syringes, trusses, or suspensory bandages, will not be allowed by the Medical Department.

108. When the services of a nurse are necessary, a separate bill for the nursing will be made and certified in the same manner as that for medical attendance.

THE UNITED STATES,

To ——— ———, M. D., DR.

For medical attendance furnished to ——— ———, suffering from ——— at ——— from ——— to ——— .... $———

For medicines as per accompanying prescriptions .... ———

———

I certify that the above account is correct and just; that the services were rendered as stated and were necessary; and that the charges do not exceed those customary at this place.

——— ———, *M. D.*

Subscribed and sworn to before me this — day of ———, 187–.

——— ———,

——— ———.

I certify that the above account is correct and just; that the services were rendered as stated, and were necessary; that I was on duty at ———, and could not secure attendance from a medical officer of the Army.

——— ———,
Observer-Sergeant, Signal-Service, U. S. A.

Sworn to and subscribed before me this — day of ——, 187–.

——— ———,
——— ——.

Approved:

——— ———,
Brig. Gen. (Bvt. Ass'g'd) and Chief Signal-Officer of the Army.

When the attendance has been to an assistant the form will be altered accordingly and the account forwarded through the sergeant in charge, who will indorse his remarks upon it, and inclose in letter of transmittal to this office.

109. At stations where there is a medical officer of the Army on duty, observers wil be duly notified and provided with authority to call upon him for medical assistance When medicines are not furnished directly by the Medical Department, but through a druggist, on the prescription of a medical officer, and the bill of the druggist is presented to the patient, that bill in duplicate, approved by the medical officer and receipted, will be attached to an account made out in the name of the patient, the above form being altered according to the facts, and the only sworn certificate necessary being that of the patient.

110. At all stations where there is a private soldier on duty as an assistant, the observer-sergeant in charge will give especial attention to his instruction in the theory as well as the practice of meteorology, signaling, and telegraphy.

In order that this may be properly done, the sergeant will require his assistant to give a recitation each week from one of the following-named text-books, going through them in the order given: Loomis's Treatise on Meteorology, Myer's Manual of Signals Manual of Military Telegraphy, and the Instructions to Observer-Sergeants. The assistants will be required to understand thoroughly the first six chapters of Loomis, the Manual of Signals to page 96, and all of the other text-books, until satisfied that the subject is thoroughly understood, or that the assistant is wanting in capacity to understand it.

The ordinary station-work will be fully explained, and the reasons for each instrumental correction given in detail. A brief weekly report will be made to this office showing the nature of the instruction given and progress made during that period.

The character of recitations will be stated each week on Form 30, under the head of remarks.

This duty must be carefully and faithfully performed, in order that worthy men may receive the promotion due them, and unworthy ones be disposed of.

No application from assistant observers for promotion to the grade of sergeant will be favorably considered until this course of instruction has been completed in a satisfactory manner, and is so reported by the observer in charge.

111. Assistants on duty as printers will be required to make the same recitations as other assistants, and will be borne on the weekly return in the same manner.

112. In the absence of serious special reasons or exigencies of the service, no applications for examination before the board of examiners at this office for promotion to the grade of sergeant will be favorably considered, except when made by enlisted men of the Signal-Service Detachment, United States Army, who shall have performed satisfactorily the duty of assistant to an observer-sergeant on station, or similar duty at this office, for a period of six months, and have after recall from station gone through the regular course of instruction at Fort Whipple. Such applications, by men on duty as assistants, must be made in writing, through the observer-sergeant in charge of station, (who will in all cases indorse his report of the character, habits, and ability of the applicant,) and will be acted upon by the board when vacancies exist in the authorized number of observer-sergeants.

113. The publication of the Government weather-reports by newspapers must be done without expense to the United States.

114. In reference to the issue of weather-maps, observers at stations where they are issued must bear in mind that these maps are printed for gratuitous distribution, and neither money nor other form of compensation will be charged or received for them by any observer-sergeant or assistant observer, or their agents, either for the maps themselves or for their delivery, except when such delivery is made through the post-office at the request of the parties to whom they are addressed. In such cases the parties wishing to be supplied with maps will be required to furnish the observer sufficient money for the prepayment of postage upon them at the rate of one cent per copy. Observers must keep a careful account of all moneys received by them for this purpose, and make a weekly report of the same to this office, stating the name of the par-

ties and amount received from each, and the number of maps furnished during the week to each person.

115. The publication and distribution of weather-maps constitute only a part of the regular daily duty of each observer, and while they are expected to devote a liberal amount of time to this work, it must not be done to the prejudice of their other duties.

116. For the purpose of systematizing the distribution of maps, observers will divide the territory to be traversed into as many districts as there are assistants on duty at their respective stations. The boundaries of the district assigned to each assistant must be clearly defined; the time required to traverse it ascertained by the observer by actual trial, and the places for the delivery of each map distinctly pointed out to the assistant. Within the limits of these districts maps will be delivered regularly at the places and to the persons designated by this office, and to those selected by the observer with the approval of the chairman of the meteorological committee. Weekly reports will be made to this office of all additions to the lists of persons and places so selected.

117. All applications for maps from parties living beyond the district limits, referred to in the preceding paragraph, will be forwarded to this office for action, and if approved, maps will be furnished on personal application at the observer's office, or through the mail, as provided for in the first paragraph. This information will be posted up in the office of each observer printing and distributing maps.

118. Observers will select such places for posting the daily weather-bulletins and maps as will insure their widest publicity at all hours of the day and night, and will report the names and locations of the places thus selected to the Chief Signal-Officer. At the same time they will report the location of their own offices, giving name of street and number. This information will also be furnished to the manager of the telegraph-office charged with the transmission and receipt of the reports.

119. Observers must not make use of the telegraph in communicating with the central office in Washington, except in cases of the utmost importance. Where the use of the telegraph is considered unnecessary by the Chief Signal-Officer, the cost of the telegram will be charged against the observer sending it. The official form must always be used for telegraphic communications.

120. Communications to this office on official business will be written on the official size of letter-paper, inclosed in an official envelope, and directed to "The Chief Signal-Officer of the Army, Washington, D. C." The words "Official Business" will be written on the left-hand upper corner of the envelope.

121. Half sheets of paper will be used in all cases in which letters are completed on the first page. When more than one page is required a whole sheet will be used.

122. Communications written on letter-paper will be folded in three equal folds; on foolscap or legal-cap paper, in four equal folds, parallel with the ruling. Observers must not brief any official letter forwarded to this office, and must give the full names of all persons referred to.

123. All official communications received by observers, wherever serving, from parties not connected with the signal-service, will be immediately referred to this office for such action as may be considered necessary.

124. No letters containing information in reference to the signal-service will be made or sent to any person or persons by observers on station until such reports or letters have been submitted to and approved by the Chief Signal-Officer.

125. Observer-sergeants and their assistants will be especially neat and careful in their dress; and any negligence in this particular coming to the knowledge of the Chief Signal-Officer will be considered sufficient cause for the reduction of the offender to the rank of a private soldier.

126. All enlisted men on station, wherever serving, will be inspected in uniform, and inspecting officers will, in their reports, make special mention of the uniform of each man inspected, and will also make neglect of duty in connection with the uniform a subject of charges. The coat belonging to the uniform will be that described in General Order No. 92, War Department, Adjutant-General's Office, October 26, 1872. Men serving on stations may wear the forage-cap described in that order. Prompt requisition will be made for this uniform upon the property-officer of this office whenever necessary.

127. Observer-sergeants will not comprise in the same communication matters relating to different subjects, nor their meteorological observations and general details of duty, with those relating to property received or disposed of, communication or pay-vouchers, bills, or any other particular involving money or property accountability.

Letters of transmittal, application, or explanation, under these two general heads, must be written on separate sheets of paper, but may be sent in the same envelope as a matter of economy.

128. Upon the receipt of an order from this office to lower a cautionary signal that may have been displayed at any station, the observer will collect the necessary data

from mariners and others in reference to benefits, &c., derived from such display, and will report the same, together with comments that may have appeared in the papers, to this office. When the signal has not been justified the fact will be stated.

129. Observers will give close attention to the observation and record of all local premonitory signs of storms or changes of weather, and report them promptly to this office. The following points should be particularly noted: Direction and force of the wind; kind, direction, motion, and appearance of the clouds; action of the barometer and thermometer before, during, and after a storm or change of weather, and such other purely local causes as appear to influence the results.

130. The attention of observer-sergeants is directed to the fact that they are required to make their reports absolutely correct, and that any shortcoming in this respect renders them liable to punishment. Aside from this, it should be kept constantly in mind that a single incorrect report may cause the loss of life and property to an unknown amount, and all reports must be made with this responsibility clearly in view. Whenever an observer is unable from any cause to get in his report, properly corrected, at the regular hours of report, he will *not* send the uncorrected portion, but will write the word "Blank" in each of the spaces that would otherwise have been occupied by this portion of the report. Observers will *never* send any report or part of report which they have reason to believe is incorrect, and will bear in mind that it is safer and more in accordance with instructions to omit a report than to make a false one.

131. No official reports will be forwarded to this office without being carefully compared with the original records from which such reports are made. Observers having assistants will have the latter read the original matter, and the observer will check and correct the copies to be forwarded to this office, signing the reports only after he has thus assured himself of their *absolute correctness.* Special attention will be given to Form 22, and the several columns will be added up *twice*, both by the observer and assistant.

Observers without assistants will, if possible, procure some other person to assist in verifying their reports. All errors that may be discovered at the central office upon examination of the reports will be *checked* against the respective observers.

132. Upon the receipt of a circular at any station, the observer in charge will read it carefully and forward to this office a brief written synopsis of its provisions as understood by him. Where one or more assistants are on duty at a station the provisions of all circulars received will be carefully explained to each one. Whenever practicable this synopsis will be written on the margin of the printed form used to acknowledge the receipt of orders and circulars.

133. In the event of one or more instruments at a station becoming disabled and unfit for use, observers will fill up the space or spaces in the different forms intended for the readings of such instruments with the word "Blank," until they are repaired or replaced. If the instruments cannot be properly repaired at the station the observer will at once notify this office.

134. Observers are expected and required to improve themselves in the duties of their position, and are liable at any time after one year's service to be called before a board for their second regular examination.

135. On the first days of January and July (or within ten days thereafter) of each year, every observer-sergeant in charge of a station will make out and forward to this office a concise statement of the operation of his station for the preceding six months. This statement must show the changes (if any) that have been made, and the number of reports received, during that period, with the reason for such changes when known. It will also show the amount of public interest taken in the service, and the classes of citizens deriving the greatest amount of benefit from the reports. If any marked advantages to commercial or other interests have been derived from the use of the reports or display of cautionary signals, the facts in each instance will be briefly set forth.

136. Observers in charge of stations will mail, on Saturday of each week, a copy of that morning's issue of every daily newspaper published at their stations, which contain the weather-reports in any form.

137. All applications from observer-sergeants or assistant observers of the Signal-Service, United States Army, for furloughs or official privileges of any description, must be made directly to the Chief Signal-Officer of the Army.

138. The Secretary of War has power to grant discharges, which this office is authorized to promise when applied for on proper grounds, and at times when no special injury to the service would result therefrom; but as a rule no application for discharge will be favorably entertained until after two years of faithful service, and not then, except as above specified. In cases of urgent necessity such application may be made by telegraph, but in all ordinary cases will be in writing, and forwarded by mail.

139. All communications to this office from an assistant observer must be forwarded through and indorsed by the observer-sergeant in charge of the station at which he is serving.

140. Whenever any observer-sergeant is relieved from duty in charge of a station, he

will, before leaving said station, inform his successor of the location of all map-frames, bulletin-boards, and other Government property for which he is responsible to this office. He will also introduce him personally to the members of the meteorological committee or committees of the chamber of commerce and board of trade, and give him such information in reference to the past record of the station and its local meteorological and other peculiarities as will enable the duties of the station to be intelligently discharged by such successor.

A written statement that the provisions of this paragraph have been complied with will be made to this office by both observers.

141. Parties desiring to purchase maps from this office will be required to forward the amount of postage on the same, in addition to the cost price of the maps as given below.

I. The several varieties of the weather-maps will be sold at the following prices:

Maps in one color, without reports or isobaric lines, 1½ cents each.

Maps in two colors, without reports or isobaric lines, 2 cents each.

Maps on manifold paper, without reports or lines, in books of 100 each, $2.75 per book.

Maps in one color, with current reports and isobars, 2 cents each.

Maps in two colors, with current reports, isobaric and isothermal lines, 3 cents each.

Postage on each map one cent additional, except the manifold ones, on which it will be 28 cents per hundred.

II. Parties desiring copies of any of the following-named publications of this office will be supplied until further notice upon the receipt of the amount of postage on each, as follows:

Annual report	24 cents.
Circular on the practical use of meteorological reports and weather-maps	10 cents.
Monthly Weather Review	1 cent.
Weekly Chronicle	1 cent.

III. All communications in reference to the purchase of maps, whether containing money or not, must be forwarded to this office for action, and payment for maps must in all cases be made in advance and the money sent direct to the Chief Signal-Officer, Washington, D. C. Observers are not authorized to sell maps.

142. One copy of this table of prices will be kept posted in the observer's office for the information of the public.

143. Observers receiving money from individuals to be applied to the payment of postage on maps, bulletins, or other official publications issued by them, will keep a record of the amount received, and forward a weekly statement to the Chief Signal-Officer, showing the amount on hand at date of last report, amount received and expended since that date, amount remaining on hand, and names of parties from whom it was received, with such other information as may be necessary.

INSTRUCTIONS TO OBSERVER-SERGEANTS, SIGNAL-SERVICE, UNITED STATES ARMY, AT RECRUITING STATIONS.

144. I. Instructions have been issued by the War Department to the superintendent of the general recruiting service of the Army to direct the recruiting officers of that service, stationed at certain points, to enlist and order to report to this office such men who can pass the required physical examination as may be presented to them by the sergeants of the signal-service stationed at those points, which now are the following, viz: New York, Philadelphia, Baltimore, Cincinnati, Saint Louis, Boston, Buffalo, Chicago, Cleveland, Detroit, Indianapolis, and Louisville.

The observer-sergeants in charge of those stations will, accordingly, as part of their duties, endeavor to obtain and present selected recruits to the recruiting officer of the general recruiting service at the same city.

II. Instructions have also been issued by the War Department to the superintendent of the general recruiting service of the Army to direct the proper recruiting officers not to reject men presented for enlistment by the sergeants of the signal-corps, on account of shortness of stature, if such applicants are not less than five feet four inches in height, or on account of age, if such men are over thirty-five and under forty years of age.

III. No applicant will be presented for enlistment who shall not, in all other respects than as above specified, fulfill the requirements of the recruiting regulations, of which, and of such changes in them as from time to time are made, information will be obtained by inquiry of the recruiting officer, who will take such measures for physical examination as are usual in the recruiting service. The responsibility of the observer-sergeant will be confined to the selection of recruits for presentation.

IV. With reference to so much of paragraph 1 in each of circulars No. 17 and 18, dated respectively June 7 and July 1, 1873, from this office, as states that men under twenty-one years of age are not enlisted, it will be understood that while the enlistment of minors is in general to be discouraged, special exceptions may be made by this office. The act of Congress approved May 15, 1872, (published in General Orders 30, War Department, Adjutant-General's Office, series 1872,) does not prohibit the enlistment of men under twenty-one, who are over eighteen years old, when the written consent of the parent or guardian is properly given, but on the contrary, by necessary construction, sanctions such enlistments when no other objection exists. Should a case arise which, in the judgment of the observer-sergeant, renders an exception to the general rule desirable from the special fitness of the applicant, the latter may forward to this office his application, with the written consent of parent or guardian, on which the observer-sergeant will make a full indorsement of the reasons for recommendation. It is supposed that if this office should except the applicant from the operation of the part of the circulars above mentioned, the recruiting officer would not refuse enlistment on the ground of minority alone.

V. Applicants shorter than five feet four inches will not be presented to the recruiting officer, nor will applications from them be forwarded to this office with a view to their enlistment at the station; but such men may be informed that if they present themselves at this office in compliance with paragraph 2 of circular No. 18, dated July 1, 1873, and pass the examination therein referred to, and also that of the surgeon here, they will be recommended for special exception to the requirements regarding height, which will probably result in their enlistment at this office. The observer-sergeant will not encourage any men to take this course except such as in his judgment are exceptionally fit for this service, a statement to which effect, with the reasons therefor, he will indorse upon a written application in each case for the examination referred to, in which the applicant will clearly state his understanding that he takes upon himself all expense of coming before the board, without any expectation of reimbursement by the United States in any event. Such application, so indorsed, will be brought by the candidate in person for his identification.

VI. No request for exception to the result of the physical examination by the examining surgeon at a recruiting station will be entertained at this office, unless made by the applicant in writing through the surgeon and recruiting officer and forwarded by the latter.

VII. Applicants for enlistment will be divided by the observer-sergeant into two classes, viz: Those for the "full" and those for the "field signal-service," as hereinafter more fully explained, but for both classes it is expressly directed that a high standard shall be maintained, and great care taken not to present recruits who are of bad habits or character so as to cast discredit upon the service, or occasion useless expense to the United States. Special pains will also be given by the observer-sergeant that each applicant shall, before his presentation to the recruiting officer, fully understand for which of the two above-mentioned classes he enlists, with their several requirements, and the recruiting officer will be requested to note in the margin of the enlistment paper and also in the order directing the recruit to report to this office the proper designation of "full signal-service" or "field signal-service," as the case may be.

VIII. Applicants will be presented for the "full signal-service" who, in the judgment of the observer-sergeant, are fitted by education and intelligence for the full duties of the signal-service, including not only field-signals and telegraphy, but also the observation and report of storms, by telegraph and signal, and display of cautionary signals, for the benefit of commerce and agriculture, under the joint resolution of Congress approved February 9, 1870, the acts of Congress approved June 10, 1872, and March 3, 1873, and the authorization of the Secretary of War, and for such other duties as may be required in connection therewith. Only such will be selected as upon examination by the sergeant are able to read and write the English language, have some knowledge of arithmetic, and have sufficient intelligence to be capable in time of performing any of the duties required in the signal-service. The same proficiency required in the examination for assistants to observers will not, however, be insisted upon, as there will be opportunities for future improvement through study and the use of text-books which are provided at Fort Whipple, Va., to which post all the recruits will at first be ordered.

IX. Applicants who, in the judgment of the observer-sergeant, are not fitted by education and intelligence for the full duties of the signal-service, but who are of such ability and character as to render them qualified for the field duties of the signal-service, *i. e.*, those including field-signals and electric-telegraph, as distinguished from those including the observation and reports of storms, and display of cautionary signals, &c., will be presented to the recruiting officer for enlistment in the "field signal-service." The recruits so enlisted will not be precluded from eventual advancement to the full duties of the signal-service and promotion, in case they prove fit and worthy, but will not be considered as included, upon their enlistment, in the regulations in reference to examination, instruction, and other special provisions made for those recruits who may have been enlisted with special reference to the "full duties of the signal-service," *i. e.*, those embracing the observation and report of storms and display of cautionary signals.

They may, however, be subject to detail in any of the duties of the signal-service, in the discretion of proper authority.

X. A report of enlistments will be mailed to this office every Saturday, showing the enlistments made during the week, giving name of recruit, date of enlistment, name and rank of recruiting officer, "Enlisted for full signal-service," or, "Enlisted for field signal-service," as the case may be, and other particulars suggested by the form furnished, or which may be necessary for full information on the subject. In case a recruit shall have fair skill as a printer, carpenter, or blacksmith, (the enlistment of such men to be encouraged,) the fact will be noted opposite his name, in addition to the designation of "full" or "field" service. If no enlistment shall be made, or no applications received, the fact will be stated.

XI. Special attention will be directed to prevent any misunderstanding or complaint of misrepresentation regarding the requirements and duties of the signal-service and the terms of enlistment. The circulars from this office, Nos. 17 and 18, dated respectively June 7 and July 1, 1873, are designed to give full information on these subjects, and both of them will be in all cases exhibited to applicants for enlistment, the observer-sergeant truthfully explaining any portion which may not be understood, but not deviating from its terms. Circular No. 17 is explanatory of the "field" and No. 18 of the "full" service, and, after it shall be decided for which of these classes the applicant proposes to enlist and will be presented by the sergeant, the form at the end of the appropriate circular will be properly filled up, signed by the applicant, and witnessed by a disinterested person before the applicant shall be presented to the recruiting officer, and, if the enlistment shall be perfected, the circular so signed will be forwarded to this office with the next weekly report of enlistments. When more copies of the circular above mentioned or of the report of enlistments are needed, requisition will be made for them in the usual manner.

XII. Posters directing application to the observer-sergeant at each recruiting station will be furnished, which he will cause to be posted in proper places and in sufficient numbers, replacing those destroyed or obliterated, the expense of posting which will be paid from this office on his forwarding bills in the usual manner. Publication in newspapers at the station of a notice similar to the posters would prove of much greater value, but this office is not authorized to pay for advertisements. It is supposed, however, that out of interest in the service and in return for information given gratuitously to the press, some newspapers will, when requested by the observer, publish a proper notice, which will be procured, if possible, under a distinct understanding that it cannot be paid for.

XIII. A copy of these instructions, and also one of circulars Nos. 17 and 18, before referred to, as well as of any future instructions or circulars which may be issued on the subject, will be presented by the sergeant to the recruiting officer at the station, in order that he may fully understand the directions given by this office in reference to the execution of the instructions of the War Department, which, it is supposed, have been communicated to that officer by the superintendent of the general recruiting service.

PROPERTY.

145. Blank forms, entitled "Report of signal-service property," will be furnished each observer for making out a quarterly report of the property at his station, which report will be rendered at the expiration of the quarters ending, respectively, March 31, June 30, September 30, and December 31, of each year.

This report will be filled out in the following manner: All property received from this office, and purchased at the station by proper authority from this office, will be entered on the line containing the words "Total during quarter."

On the line headed "Issued and expended during the quarter" will be entered in the proper columns the total expenditures of forms, stationery, &c., consumed in performing the regular duties of the station during the quarter, with such articles as may have been returned to this office. These will be deducted from the amounts in the line beginning "Total during quarter," and the remainders brought down and entered on the line "Total on hand to be accounted for," which completes the *first* report from any station.

Each quarterly report will be made in duplicate, one copy to be transmitted to this office within ten days after the expiration of the quarter, and the other retained by the observer making it out, to enable him to bring forward for next report the "Total on hand to be accounted for," which will be entered in the next report as "On hand from last report."

No article will be entered in this report that is not invoiced from this office.

Every article taken up on this report must be entered under its proper heading, as the misplacement of a single figure may occasion serious difficulty. Before the report is sent in the two copies should be carefully compared, in order that they may be made to correspond exactly with each other.

146. Bills for all properly authorized improvements, repairs, or necessary work a the various stations of observation, *must* be forwarded so as to reach this office as nea the first day of the month succeeding that in which the work was done as is practicable.

147. It is required that bills for rents of offices, gas consumed, &c., be rendere monthly, and in every case where it is possible the observer is directed to procur such bills and forward them promptly on or before the expiration of each month.

148. Whenever any article of office furniture, fuel, or supplies of any descriptio whatever are purchased by an observer, under authority from this office, it will be entered on a copy of Form 6, as "received by purchase," with the name of the party furnishing it, properly dated and signed, and, accompanied by the memorandum bill o the same, will be forwarded to this office, by mail, *on the day* on which the purchas may be made.

149. All vouchers must contain the autograph signature of the party or firm in whos name they are made, and must in no instance be signed by a clerk or others for them except where necessity occasions the signing of a voucher by an attorney or agent, i which case that agent's power of attorney must accompany the voucher so signed.

150. When an observer is relieved from the charge of a station he will turn over, o proper invoices, to his successor all property and stores for which he is officially responsible, and will take duplicate receipts therefor, one copy of which he will retain and forward the other to this office with a final report, on the regular form, of th property for which he was accountable, at the date of his relief, made out in precisel the same manner as the regular quarterly report.

One copy of the invoice of property so transferred will be forwarded to this office b the observer taking charge.

151. When public property is receipted for by an observer he will make a careful examination of it, and forward a written report of the result of such examination t this office.

152. Observer-sergeants, or other enlisted men of the signal-service, receipting fo Government property, at a signal station or elsewhere, will be held personally responsible for such property; and to guard themselves against pecuniary loss will assur themselves by personal inspection that every article of property receipted for is actually at the station, and in the condition specified in the receipt.

153. Whenever any article of office-furniture, stationery, &c., is purchased by a observer, under proper authority from this office, it will be entered in a copy of For 6 as "Received by purchase," with the name of the party furnishing it, and a memorandum-bill of the price paid or to be paid, and forwarded to this office, properly date and signed, by mail on the day of purchase.

154. Authority must be obtained from this office for making all repairs and purchases at stations, except those enumerated in paragraph 119 of these instructions, an all applications for such authority must set forth the necessity for the expenditure, an state the estimated amount.

155. No public property will be used or labor employed by observers for any purpos whatever, without special authority from this office.

156. When any article of public property, not of an expendable nature, for which a observer is responsible, becomes unfit for service, from any cause whatever, he wil report the facts in the case to this office, but will not drop such article from his return until authorized to do so.

157. Observers will endeavor, by timely repairs, to keep all property for which the are responsible in serviceable condition, and necessary funds for this purpose will b provided, upon satisfactory requisition and estimates forwarded to the property an disbursing officer.

158. If any article of public property be lost or damaged, through the neglect o fault of any observer or assistant, the money value thereof will be stopped against hi monthly pay.

159. A rigid economy must be practiced by all observers in the expenses of their several stations, and all irregularities and extravagances will be promptly corrected b charging all excesses to the observers at fault.

160. The following articles will be allowed at each station, and may be purchased a the prices named by each observer without other authority:

One room for the performance of his duties will be rented by the month, at eac station, but no more than eighteen dollars per month will be paid therefor withou special authority from this office; one desk, (price not to exceed $20;) one table, wit drawers, (stained pine, and not to exceed $6;) one wash-stand, (at a price not exceeding $2;) four chairs, (not to exceed $2.25 each;) one stove, with pipe, (not to excee $25;) one coal-scuttle; one fire-shovel; one water-bucket; one cup or dipper; on goblet; one basin; one large lamp; one oil-can; one dust-pan and brush; one broom two common spittoons; one lantern. The above-named articles must be of a cheap plain, and substantial kind. Memorandum-bills (unreceipted) for rent, labor, and pur chases will be sent to this office as soon as presented, and will be settled at the earliest opportunity.

161. Upon the shipment of any article of property which may be ordered to be turned in to this office, by express, observers are directed to procure from the express-agent at their stations receipts in duplicate for the package or box, and forward them to this office by mail on the date of shipment.

162. Memorandum-bills for labor and for articles purchased must be sent in separately.

163. Fuel will be purchased for heating office, by each observer, at the current market rates, and bills forwarded to this office for settlement. The cost of carrying coal and other fuel to the observer's office will be included in the price of the fuel, and not charged as a separate item.

164. The pay and allowances of observer-sergeants and enlisted men serving as assistant observers are obtained from three different sources, and will be drawn through the property and disbursing officer of the Signal-Service, United States Army, at the end of each month, on the receipt at this office of the following blanks, signed in duplicate:

1st. Form 5—Pay Department:

(FORM 5.)

The UNITED STATES,

To JOHN THOMPSON, Dr.

	Dollars.	Cents.
For pay from 1st of ——, 187-, to —— of ——, 187-, being —— months, —— days, at —— dollars per month..........		
Amount		
Deduct for Army Asylum .... $——		
Due United States for clothing overdrawn .... ——		
Due United States for tobacco .... ——		
Balance		

Received of —— ——, Paymaster United States Army, this —— day of ——, 187-, —— $\frac{}{100}$ dollars, in full of the above account, by check No. ——, on —— United States Treasurer, ——, this date, for $——.

JOHN THOMPSON,

(Signed in duplicate.) *Sergeant Signal-Service, U. S. A.*

This payment accords with the soldier's descriptive list, and is noted thereon.

——,

Paymaster U. S. A.

2d. Form Y—Commissary Department:

(FORM Y.)

The UNITED STATES,

To JOHN THOMPSON, *Sergeant Signal-Service, U. S. A.*, Dr.

	Dollars.	Cents.
For commutation of rations while on extra duty as ——, at ——, from —— to ——, 187-, inclusive, —— days, at 75 cents per day		

I certify that the above account is correct and just; that the commutation was mad by order of the Secretary of War, and was necessary for the public service, there bein no opportunity for messing.

———,
———.

Received at ———, this ——— day of ———, 187–, from———, C. S. United State Army, the sum of ——— dollars and ——— cents, in full of the above account.

JOHN THOMPSON,
Sergeant Signal-Service, U. S. A.

(Signed in duplicate.)

3d. Signal-Service Receipt-Roll—Quartermaster's Department.

(Voucher to Abstract B.)

(FORM No. 13.)

The UNITED STATES,

To ——— ———, DR.
——— *Signal-Service, U. S. A*

On extra duty as ———, at ———.

	Dollars.	Cents.
For extra-duty pay from ——— to ———, 187–, inclusive, ——— days, at ——— per day.		
For commutation of fuel from ——— to ———, 187–, ———, at $——— per month....

JOHN THOMPSON.

(Signed in duplicate.)

These vouchers will be signed by observers and their assistants, one set by eac man, exactly as shown in the above illustration.

165. *No part of the body or receipt of either form will be filled up before transmission*, and they must be forwarded direct to this office at such time as will insure their receipt b the property-officer before the 20th of each month.

166. *Observers will not be allowed to sell or otherwise dispose of any of the above-mentioned accounts, nor will they be permitted to draw upon this office, or any of the officers connected therewith, without special authority.*

167. The following tables show the amount of monthly pay to be received by observer and their assistants, for the different years of service, and the sources from which it i received:

Estimate of monthly pay proper and clothing allowance.

FOR SERGEANTS.

Year of enlistment.	Pay proper.	Stoppages, retained pay, and Soldiers' Home.	Amount paid.	Amount retained each month.		Total amount due each month.
				Clothing allowance.	Retained pay.	
1	$17 00	$0 12	$16 88	$7 60	....	$24 4
2	17 00	13	16 87	4 66	....	21 5
3	18 00	1 12	16 88	5 94	$1 00	23 8
4	19 00	2 13	16 87	4 66	2 00	23 5
5	20 00	3 12	16 88	5 08	3 00	24 0

FOR PRIVATES, FIRST CLASS.

1	$13 00	$0 12	$12 88	$7 38		$20 26
2	13 00	13	12 87	4 54		17 41
3	14 00	1 12	12 88	5 78	$1 00	19 66
4	15 00	2 13	12 87	4 54	2 00	19 41
5	16 00	3 12	12 88	4 87	3 00	20 75

FOR PRIVATES, SECOND CLASS.

1	$13 00	$0 12	$12 88	$7 29		$20 17
2	13 00	13	12 87	4 52		17 39
3	14 00	1 12	12 88	5 75	$1 00	19 63
4	15 00	2 13	12 87	4 52	2 00	19 39
5	16 00	3 12	12 88	4 85	3 00	20 73

The amount retained—$1 each month from pay of third year, $2 from fourth year, and $3 from fifth year—will not be paid until final discharge from the service, and will be forfeited unless the soldier shall have served faithfully to date of discharge.

The pay per month of a soldier re-enlisting after five years' service will be that of the fifth year of his former term, less $1 retained pay. He will also receive $2 per month additional for re-enlistment.

Clothing allowance per month.

Rank.	First year.	Second year.	Third year.	Fourth year.	Fifth year.	Total for five years.
Sergeant	$7 60	$4 66	$5 94	$4 66	$5 08	$335 28
Private, first class	7 38	4 51	5 78	4 54	4 87	325 32
Private, second class	7 29	4 52	5 75	4 52	4 85	323 16

But no clothing allowance will be paid the soldier except on "final statements." When clothing is drawn, if the allowance is exceeded it will be settled by the soldier on the 30th June and 31st December of each year.

Monthly estimate of quartermaster.

No. of days in the month.	Fuel—rate per month.	Quarters—rate.	Extra pay—rates.	Total.
28	$8 00	$10 00	$10 15	$28 15
30	8 00	10 00	10 50	28 50
31	8 00	10 00	10 85	28 85

Assistants are not allowed extra-duty pay.

Monthly estimate of commutation of rations.

No. of days in the month.	Rate per day.	Total.
28	$0 75	$21 00
30	75	22 50
31	75	23 25

Estimate of monthly pay of sergeants (observers) and privates (assistants).

SERGEANTS—FIRST YEAR.

No. of days in the month.	Pay proper.	Quartermaster's Dept., pay.	Commissary, pay.	Amount of pay received monthly.
28	$17 00	$28 15	$21 00	$66 15
30	17 00	28 50	22 50	68 00
31	17 00	28 85	23 25	69 10

SECOND YEAR.

28	$17 00	$28 15	$21 00	$66 15
30	17 00	28 50	22 50	68 00
31	17 00	28 85	23 25	69 10

THIRD YEAR.

28	$18 00	$28 15	$21 00	$67 15
30	18 00	28 50	22 50	69 00
31	18 00	28 85	23 25	70 10

One dollar per month retained until discharged.

FOURTH YEAR.

28	$19 00	$28 15	$21 00	$68 15
30	19 00	28 50	22 50	70 00
31	19 00	28 85	23 25	71 10

Two dollars per month retained until discharged.

FIFTH YEAR.

28	$20 00	$28 15	$21 00	$69 15
30	20 00	28 50	22 50	71 00
31	20 00	28 85	23 25	72 10

Three dollars per month retained until discharged.

PRIVATES.—FIRST YEAR.

No. of days in the month.	Pay proper.	Quartermaster's Dept., pay.	Commissary, pay.	Amount of pay received monthly.
28	$13 00	$18 00	$21 00	$52 00
30	13 00	18 00	22 50	53 50
31	13 00	18 00	23 25	54 25

SECOND YEAR.

28	$13 00	$18 00	$21 00	$52 00
30	13 00	18 00	22 50	53 50
31	13 00	18 00	23 25	54 25

THIRD YEAR.

28	$14 00	$18 00	$21 00	$53 00
30	14 00	18 00	22 50	54 50
31	14 00	18 00	23 25	55 25

One dollar per month retained until discharged.

FOURTH YEAR.

28	$15 00	$18 00	$21 00	$54 00
30	15 00	18 00	22 50	55 50
31	15 00	18 00	23 25	56 25

Two dollars per month retained until discharged.

FIFTH YEAR.

28	$16 00	$18 00	$21 00	$55 00
30	16 00	18 00	22 50	56 50
31	16 00	18 00	23 25	57 25

Three dollars per month retained until discharged.

In addition to the above rates of pay, enlisted men will receive the usual allowance for first, second, third, and fourth re-enlistments.

168. All useless and broken instruments will be forwarded to this office and carefully packed.

169. All instruments or public property of any character whatever, returned to this office by observer-sergeants, or other enlisted men of the signal-service, must have a tag or slip of paper securely attached thereto, indicating the station whence it comes, marked—"Returned from ———, under instructions from O. C. S. O., of date ———."

170. Timely requisition will be made upon the property-officer for books of record, stationery, forms, &c., to insure their receipt before the supply on hand is exhausted.

171. Requisitions for forms and stationery will be made quarterly by mail, and will embrace all the different varieties required for use at stations.

172. In consequence of the abolition of the franking privilege the postage on all official matter transmitted through the mails on and after the 1st day of July, 1873, must be prepaid by postage-stamps.

To enable observers to give compliance to this requirement they will be furnished for official use stamps of different denominations. A weekly return of stamps received and expended will be made on the regular blanks and forwarded weekly to this office. These returns must be made promptly at the expiration of each week, showing how many of each denomination of stamps are on hand at the closing of the last mail of the week; a copy of the return to be retained by the observer in each instance. A memorandum-book furnished for this purpose will be kept, in which will be noted each package or letter mailed, stamped with the official stamp, entering therein the addresses and the number and denomination of stamps used on each and every piece of official mail-matter transmitted; this data will be kept up to enable observers to make reports to the central office as to the exact disposition of the stamps, which report is liable to be called for at any moment.

SPECIAL INSTRUCTIONS.

In case of actual or anticipated neglect or refusal on the part of the employés of any telegraph company by which he is directed to transmit telegraph communications, at the time and in the manner stated in the orders of the Chief Signal-Officer to the observer in charge of a station, then in force, he will proceed as follows:

1. He will prepare every telegraphic communication according to his instructions, and present each, at the time designated, at the proper office of the company for the reception of such communications. He will continue to present all reports, as to the regular tender of which the company has once been advised, until it has been notified by this office that such tender will cease after a certain date, of which notice the observer will be informed.

2. He will, in advance of the presentation of all telegraphic communications, give specific notice to the company, during its usual hours of business, that an official communication of a certain-mentioned character, from the observer, addressed to a certain official person or persons, (the address to be specified,) will, at a certain subsequent hour, (stating what hour,) be presented at the office of the company for telegraphic transmission. This notice will provide for every regular report to be made during the ensuing twenty-four hours, and also will be given in advance of any special communication, when practicable. Such notice will be in writing, addressed to the local manager of the company, and will be delivered, open, to the officer or employé of the company who may be in charge of the local office at the time of delivery. The written notice will be signed in duplicate by the observer, and one copy filed and retained by him. The following general form will be observed:

"SIGNAL-SERVICE, UNITED STATES ARMY,
"*Observer's Office*, ——, ——, 187—.

"To —— ——,
"*Manager of the Telegraph Company at* ——:

"SIR: As an agent of the War Department for the purpose of taking meteorological observations, in pursuance of the laws of the United States, and of preparing telegraphic communications relating thereto, and of presenting the same for transmission to telegraph companies, I have the honor to give notice hereby that, in accordance with orders received by me to that effect, I will present at the office of the above-mentioned telegraph company at this place, severally, at the times hereinafter mentioned, certain official communications from myself, in my official capacity, and addressed as specified, viz:

"One communication will be presented at —— o'clock — minutes —. m of —— the —— day of ——, 1872, addressed to —— ——.

"One communication will be presented at —— o'clock — minutes —. m of —— the —— day of ——, 1872, addressed to —— ——.

"One communication will be presented at —— o'clock — minutes —. m of —— the —— day of ——, 1872, addressed to —— —— ——.

"I have the honor to request that the communications above referred to may be received and transmitted telegraphically by the said company to their respective addresses at the times above mentioned, at which they will severally be presented for that purpose.

I am, sir, respectfully yours, &c.,

"—— ——,
"*Observer-Sergeant, Signal-Service, U. S. A.*"

He will also record the time, place, and person, when, where, and to whom he delivered such notice, and reduce to writing any oral reply made or action taken. The record must be dated, timed, and made, plainly written, immediately after the service of the notice.

3. He will present his regular reports for transmission at the times, and as directed in his schedule, at the telegraph-offices, until further orders, whether or not the company has any employés then present whose usual duty it is to receive them. If the office is open for his admission, although closed for the transmission of messages, the communication should be presented to the most responsible person present in the employ of the company, a copy being always retained, and record made as above directed. If the office appears to be closed, he will make himself sure of the fact that it is so.

In writing the message for transmission the observer will not use any form imposing terms or the limitations of a contract, but will write the communications tendered on the form directed by this office.

4. He will keep a written record of the time when, place where, and the name of person employed by the company, to whom each communication was presented. In

case the office was closed, so that the communication could not be presented to any employé of the company, he will record the time and place with the fact. If any employé of any telegraph company refuses to receive the message presented to him, it will be sufficient to have made the tender, and to preserve such record as will establish the fact that it was made. The records, in all cases, must be dated and timed, and must be made, plainly written, immediately after the tender of the message. It should rehearse all facts which may tend to keep his memory of the transaction complete.

It is desirable, though not essential, that on some of the occasions when the above-mentioned notice is delivered, as well as when the message is tendered, the observer should, if practicable, take with him another person, wholly disinterested, who may serve as an additional witness of the transaction.

Should the officer or employé in charge of the telegraph office inform the observer generally that he will not in future be admitted to the office at all, he will not, on that account, discontinue giving notice or making tenders, but will give and make, or attempt to give and make, them precisely as before.

The construction of the laws defining the relations of telegraph companies to the United States, which is held by this office, is that the companies are bound to give unconditional priority to telegraphic communications between the several departments of the Government of the United States, and between their officers and agents; that after due notice to that effect the companies are required to transmit such communications at any hour when they are tendered for that purpose, and that prepayment is not required from the Government or its agents.

All the telegraph companies by which the messages of the signal-service have hitherto been sent, according to directions given to the observers, have accepted the provisions of the act of Congress approved July 24, 1866, a copy of which, and of other acts bearing upon the subject, is hereto appended.

AN ACT to aid in the construction of telegraph lines, and to secure to the Government the use of the same for postal, military, and other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any telegraph company now organized, or which may hereafter be organized, under the laws of any State in this Union, shall have the right to construct, maintain, and operate lines of telegraph through and over any portion of the public domain of the United States, over and along any of the military or post roads of the United States which have been or may hereafter be declared such by act of Congress, and over, under, or across the navigable streams or waters of the United States: *Provided,* That such lines of telegraph shall be so constructed and maintained as not to obstruct the navigation of such streams and waters, or interfere with the ordinary travel on such military or post roads. And any of said companies shall have the right to take and use from such public lands the necessary stone, timber, and other materials for its posts, piers, stations, and other needful uses in the construction, maintenance, and operation of said lines of telegraph, and may pre-empt and use such portion of the unoccupied public lands subject to pre-emption, through which its said lines of telegraph may be located, as may be necessary for its stations, not exceeding forty acres for each station; but such stations shall not be within fifteen miles of each other.

SEC. 2. *And be it further enacted,* That telegraphic communications between several departments of the Government of the United States and their officers and agents shall, in their transmission over the lines of any of said companies, have priority over all other business, and shall be sent at rates to be annually fixed by the Postmaster-General.

SEC. 3. *And be it further enacted,* That the rights and privileges hereby granted shall not be transferred by any company acting under this act to any other corporation, association, or person: *Provided, however,* That the United States may at any time after the expiration of five years from the date of the passage of this act, for postal, military, or other purposes, purchase all the telegraph lines, property, and effects of any or all of said companies, at an appraised value, to be ascertained by five competent, disinterested persons, two of whom shall be selected by the Postmaster-General of the United States, two by the company interested, and one by the four so previously selected.

SEC. 4. *And be it further enacted,* That before any telegraph company shall exercise any of the powers or privileges conferred by this act, such company shall file their written acceptance with the Postmaster-General of the restrictions and obligations required by this act.

Approved July 24, 1866.

[PUBLIC RESOLUTION—No. 9.]

JOINT RESOLUTION to authorize the Secretary of War to provide for taking meteorological observations at the military stations and other points in the interior of the continent, and for giving notice on the northern lakes and seaboard of the approach and force of storms.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War be, and he hereby is, authorized and required to provide for taking meteorological observations at the military stations in the interior of the continent, and at other points in the States and Territories of the United States, and for giving notice on the nothern lakes and on the seacoast, by magnetic telegraph and marine signals, of the approach and force of storms.

Approved February 9, 1870.

[General Orders No. 18.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., July 3, 1872.

The following order of the Secretary of War, having been received by the Chief Signal-Officer of the Army, is published for the information of all concerned:

"WAR DEPARTMENT,
"*Washington City, June* 27, 1872.

"The Chief Signal Officer of the Army is hereby directed and ordered to carry into effect the special duties imposed upon the Secretary of War by the act of Congress approved July 24, 1866, entitled 'An act to aid in the construction of telegraph lines and to secure to the Government the use of the same for postal, military, and other purposes,' and by the public resolution No. 9, approved February 9, 1870, and entitled 'Joint resolution to authorize the Secretary of War to provide for taking meteorological observations at the military stations and other points in the interior of the continent, and for giving notice on the northern lakes and seaboard of the approach and force of storms,' and by the act approved June 10, 1872, entitled 'An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1873, and for other purposes;' and the said Chief Signal-Officer of the Army, and all such persons as have been or shall be designated and employed by him for the taking of meteorological observations, or for preparing or presenting telegraphic communications for transmission, or for transmitting the same, are hereby recognized and appointed as agents of the War Department for those purposes, and are hereby authorized and directed by and in behalf of said Department to offer to any telegraph company in the United States for transmission any and all such telegraph communications as they may be required by the Chief Signal-Officer to make, and to request the transmission thereof by such company or companies, at such times, and in such places, as may be directed by said officer.

"WM. W. BELKNAP,
"*Secretary of War.*"

By order of the Chief Signal-Officer of the Army.

GARRICK MALLERY,
Capt. and Bvt. Lieut. Col., U. S. A.,
Acting Signal-Officer and Assistant.

AN ACT making appropriations for sundry civil expenses of the Government for the fiscal year ending June thirtieth, eighteen hundred and seventy-three, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums be, and the same are hereby, appropriated for the objects hereinafter expressed, for the fiscal year ending June thirtieth, eighteen hundred and seventy-three, viz:

* * * * * * *

UNDER THE WAR DEPARTMENT.

* * * * * * *

SIGNAL-OFFICE.

For manufacture, purchase, or repair of meteorological and other necessary instruments; for telegraphing reports; for expenses of storm-signals announcing probable approach and force of storms throughout the United States, for the benefit of commerce and agriculture; for instrument-shelters; for hire, furniture, and expenses of offices

maintained for public use in cities or posts receiving reports; for maps and bulletins, to be displayed in chambers of commerce and boards-of-trade rooms; for books and stationery; and for incidental expenses not otherwise provided for, two hundred and fifty thousand dollars: *Provided*, That the Secretary of War be, and he hereby is, authorized and required to provide, in the system of observations and reports in charge of the Chief Signal-Officer of the Army, for such stations, reports, and signals as may be found necessary for the benefit of agriculture and commercial interests: *And provided*, That no part of this appropriation, nor of any appropriation for the several Departments of the Government, shall be paid to any telegraphic company which shall neglect or refuse to transmit telegraphic communications between said Departments, their officers, agents, or employés, under the provisions of the second section of chapter two hundred and thirty of the Statutes of the United States for the year eighteen hundred and sixty-six, and at rates of compensation therefor to be established by the Postmaster-General: *Provided, also*, That whenever any telegraph company shall have filed its written acceptance with the Postmaster-General of the restrictions and obligations required by the act approved July twenty-fourth, eighteen hundred and sixty-six, entitled "An act to aid the construction of telegraph lines, and to secure to the Government the use of the same, for postal, military, and other purposes," if such company, its agents, or employés shall hereafter refuse or neglect to transmit any such telegraphic communications as are provided for by the aforesaid act, or by the joint resolution approved the ninth day of February, eighteen hundred and seventy, "To authorize the Secretary of War to provide for taking meteorological observations at the military stations and other points of the interior of the continent, and for giving notice on the northern lakes and seaboard of the approach and force of storms," such telegraphic company shall forfeit and pay to the United States not less than one hundred and not exceeding one thousand dollars for each refusal or neglect aforesaid, to be recovered by an action or actions at law, in any district court of the United States.

Approved June 10, 1872.

NOTE.—In preparing these instructions free use has been made of the Smithsonian "Directions for Meteorological Observers," of those issued by the Surgeon-General of the Army, and of Colonel Williamson's valuable work on the Barometer.

The office is indebted to the courtesy of Professor Henry, the distinguished secretary of the Smithsonian Institution, for permission to use the following illustrations of the Howard classification of clouds, which is the one to be followed by all observers.

PAPER 8.

REGULATIONS AND RULES OF THE OFFICE OF THE CHIEF SIGNAL-OFFICER OF THE ARMY.

[General Orders No. 28.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., September 1, 1873.

The following regulations and rules, relating to the duties of commissioned officers, enlisted men, and civilian employés at this office, are published for their government, and will be strictly observed.

By order of the Chief Signal-Officer of the Army.

GARRICK MALLERY,
Capt. First Infantry, Bvt. Lieut. Col., U. S. A.,
Acting Signal-Officer and Assistant.

GENERAL REGULATIONS.

I.—DIVISION OF DUTIES.

The officers on duty at this office are classified as, 1st, commissioned officers of the Army and acting signal-officers who have been announced in orders as "Assistants to the Chief Signal-Officer;" 2d, other commissioned officers of the Army; and, 3d, civilian assistants. The duties of the office will be divided between them as follows:

1. One assistant to the Chief Signal-Officer will have charge of the orders, records, and general correspondence of the office, critically examining all papers presented to

him for file, and reporting upon any irregularity. He will also have the superintendence of enlistments, and perform such other duties as may be specially assigned to him.

2. One assistant to the Chief Signal-Officer will have charge, as property and disbursing officer, of all matters pertaining to money and property, (all communications upon which subjects will be referred to him for action,) together with such duties as may be specially assigned to him.

3. One assistant to the Chief Signal-Officer will, as instructor, have charge of all matters pertaining to the instruction of the signal-service of the Army, and, in addition, as "Assistant in charge of stations," will be charged with the general supervision of the observer-sergeants upon stations, and of the receipt, record, and publication of the weather-reports at this office, together with such duties as may be specially assigned to him.

4. The preparation of the current "Synopsis and Probabilities," and of the official publications in relation to practical meteorology, including the "Weekly Weather Chronicle," "Monthly Weather Review," "Daily Bulletin, Synopsis, Probabilities, and Facts," and such other duties as are related thereto, will be divided between several assistants to the Chief Signal-Officer and civilian assistants, in accordance with a roster to be published from time to time providing in advance for the specified period. In the absence of other orders, the assistant, who at any time may be relieved from the preparation of the current Synopsis and Probabilities, will take charge of the preparation of the publications above referred to.

5. One officer will have charge of the instrument-room and the examination, comparison, and repair of instruments therein, together with such duties as may be specially assigned to him. He will submit a written report to the Chief Signal-Officer every ten days on the condition of each instrument, whether its record is satisfactory as a standard; if not, to what extent it has been unreliable in its indications, with, if possible, a statement of the cause and suggestion of the remedy. His duties are more fully specified under a separate section below.

6. Two commissioned officers of the Army and acting signal-officers will be detailed as inspectors of stations. Their duties are fully set forth in a separate section below.

7. The assistants to the Chief Signal-Officer mentioned in paragraphs 1 and 3 of this section will be permanent members of the board convened at this office for the examination of applicants for enlistment and for instruction in the duties of assistant to an observer on station, and also of the board convened for the examination of candidates for promotion to the grade of sergeant, signal-service. Commissioned officers of the Army, other than those last above referred to, will, as occasion requires, be detailed to be additional members of each of these boards.

II.—RULES FOR DUTY.

The following rules relating to the duties of persons connected with the office will be observed by them:

1. When any officer or assistant at this office, charged with any regular duty or work, may be relieved therefrom, either permanently or temporarily, he will formally turn over the duty or work to the officer or assistant designated to receive it, and will direct the clerks and enlisted men, who have been serving under his orders, to report for instructions to the officer or assistant who relieves him, whose name will be stated in orders.

2. Every officer and assistant other than those above referred to in section I, "Division of Duties," paragraphs 1, 2, and 3, under the head of "General Regulation" in this order, will, daily at 10 a. m., make to the Chief Signal-Officer a written report of the duty on which he may be on that day engaged, with the number of clerks and enlisted men employed under his direction, for which purpose blank forms will be furnished.

3. Every officer under whose immediate orders enlisted men or civilian employés have been detailed for duty, will, on every Saturday, make to the Chief Signal-Officer a written report, stating the name and rank of all men on duty with him, the date when they entered upon duty at this office, the nature of their respective duties, and the changes by new detail, relief, or other casualty which occurred during the week, together with such remarks as may exhibit the conduct and work of the men reported upon.

4. The attention of all persons on duty at this office is again directed to the order of the Secretary of War, dated War Department, July 19, 1870, as follows:

"All officers and clerks on duty in the bureaus of the War Department are prohibited from exhibiting any table, statement, or paper belonging to the official records, or giving any information, copy, or extract from the same, or giving any information respecting the business of the Department to any person whatever, not on duty in one of the offices of the Department, without in each case the authority, in writing, of the chief of the Bureau concerned. A rigid compliance with this order will be enforced, to prevent improper use of information irregularly obtained."

5. In case of the absence of commissioned officers or enlisted men on duty at this office, on account of illness, a certificate to that effect from the proper medical officer of the Army in this city must be furnished without delay, by commissioned officers to the Chief Signal-Officer, and by enlisted men to the commissioned officer under whose orders they are immediately serving. A similar certificate from a practicing physician will be furnished by civilian assistants to the Chief Signal-Officer, and by clerks and other civilian employés to the commissioned officer under whose orders they are immediately serving.

III.—RULES CONCERNING OFFICE-ROOMS, ETC.

The following rules will be strictly observed in the office-rooms and halls:

1. The duties of this office do not admit of general office-hours being defined, which will, in the several divisions, be such as shall be, from time to time, established by the officer in immediate charge. As concerns the public, the office-hours will be considered as between 9 a. m. and 3 p. m., and persons unconnected with the office will not be admitted to the rooms except during those hours, unless accompanied by an officer. Visitors will not be received in the instrument-room before 12 m., except in cases specially designated.

2. The office-rooms must not be used as visiting-rooms, or for purposes of entertainment. Persons visiting the office are expected to transact their business as promptly and briefly as practicable.

3. The rooms occupied exclusivly by clerks and enlisted men will not be visited by any persons unconnected with the office, except for some urgent necessity and with the special permission of the commissioned officer under whose orders the men in the room to which admission is desired are serving.

4. All employés entering or retiring from the office will do so in a quiet and orderly manner.

5. Conversation upon any other subject than such as relates directly to the business of the office; giving of information, unless called for by the proper authority; writing of private letters and reading of newspapers during hours of duty, are strictly prohibited.

6. All conversation necessary to the proper discharge of the duties of the office will be carried on in a low tone of voice; and all unnecessary noise, either in the rooms or halls of the office, is prohibited.

7. Messengers in passing in and out of the rooms and halls will do so as quietly as possible, and will report their business in each room, at all times, to the clerk or non-commissioned officer in charge, or, in his absence, to the enlisted man in temporary charge of the room.

8. No rooms occupied by either commissioned officers, civil employés, or enlisted men will at any time be locked, except the room in the personal charge of the chief clerk in the property-division and the model-room, which two rooms shall be kept locked, when not in use, and the keys placed in charge of the watch-sergeant.

9. The clerk or non-commissioned officer in charge of a room will be held responsible for a strict observance of the above rules by all employés under his charge, and any violation of them will be promptly reported by him to the commissioned officer under whose orders the offender may be serving.

IV.—CORRESPONDENCE AND RECORDS.

1. All communications in any way relating to, or connected with, the business of this office, should be addressed to the Chief Signal-Officer of the Army; and any communication in any way relating to such business, received by a military or civilian assistant, or any other person connected with the office, without such address, will be regarded by him as official, and will be handed to the assistant having charge of the records and general correspondence, that it may be properly entered upon the books of the office and receive attention.

2. All papers prepared in the office, or compiled from the data belonging to it, or in the preparation of which its facilities, clerks, books, or records are used, are the property of the United States, are subject to the direction of the Chief Signal-Officer, and will be made of record by presentation to the assistant in charge of records, except in cases where the Chief Signal-Officer may specially direct their submission in the first instance to himself. All such papers will be kept in the office and accessible to proper authority, in case they may be needed in the absence of any officer or assistant.

3. All communications from this office, in any manner relating to or connected with its business, will either be written in the name of the Chief Signal-Officer, and be signed by him, or will set forth in terms that they are written by his direction, and will in that case be signed by the officer having general instructions in relation to them, or

written special instructions in the particular case. No such communication will, in any case, be written without the direction or approval of the Chief Signal-Officer previously obtained; nor will any such be sent or mailed from the office until it shall have been duly entered and copied on the office-books, for which purpose it will be presented to the assistant having charge of the records and correspondence.

4. The official title of the civilian assistants in the signal-service is "Assistant in the office of the Chief Signal-Officer," or abbreviated, "Assistant O. C. S. O.," which title, in case of signature, will be written after the name, and will be appended to all official papers. All papers so officially signed will be handed to the assistant in charge of records, except when the Chief Signal-Officer may specially direct that they shall be submitted to himself in person.

5. All papers or writings in any way relating to the duties with which the office is charged, or to the subject of, or theories concerning, meteorology having relation to those duties, prepared by any person in any way employed in this office, in any manner proposed for publication or likely to be published, must be formally submitted to the Chief Signal-Officer, for such disposition as he may direct.

The mode of publication of any deductions or theories or papers of any description, to have in any way or by any construction the sanction of the office, has already been determined upon, and the annoyances to arise through deviation from the plan contemplated cannot be permitted.

6. The writing-paper of this office, having an official heading, stamped or printed, will not be used for communications of a private or personal nature, and when such official heading is used, whether stamped, printed, or written, the communication will be considered as official, and be subject to the provisions of the above paragraphs.

7. Neither the official envelopes of the office, nor the official postal stamps furnished to it, will in any case be used to cover any but strictly official communications, written and disposed of in accordance with this order.

8. Requests for the use of any filed paper will be made to the assistant in charge of records, who will provide checks for its return to file. He will furnish any additional information or explanation applied for, on the subject of this section, and will be responsible for the observance of its provisions.

9. The correspondence and official papers connected with the duties of property and disbursing officer, and those connected with the general supervision of the observer-sergeants upon stations, and of the receipt, record, and publication of the daily weather-reports at this office, are not included in the provisions of the above paragraphs 1, 2, and 3 of this section, and the officers designated by paragraphs 2 and 3 of section I, "Division of Duties," under the head of "General Regulations" in this order, will be responsible therefor, in the same manner as has hitherto been the usage of the office.

10. The following table exhibits the papers, reports, &c. connected with this section to be submitted by the Chief Signal-Officer of the Army to the honorable Secretary of War, and to the Adjutant-General, War Department:

Papers, reports, &c., to be submitted by the Chief Signal-Officer of the Army to the Hon. Secretary of War and to the Adjutant-General, War Department.

8	Muster-roll of the enlisted men of the signal-service, United States Army.	......do	On the last days of February, April, June, August, October, and December, or as soon thereafter as practicable.	......do	Do.

V.—GENERAL CORRESPONDENCE AND RECORD-ROOMS.

These rooms are in immediate charge of one chief clerk, with general supervision.

The enlisted men employed and the special duties assigned to each are as follows:

One sergeant, whose duty it is keep a correct record of all “letters sent” to genera correspondents, and, in the absence of the chief clerk, to assume charge of the rooms.

One enlisted man who keeps a record of all “letters sent” to observer-sergeants i charge of stations and “letters received” from telegraph companies; one in charge o “letters received” from general correspondents; one in charge of “letters received from observer-sergeants and from those corresponding in the interests of agriculture one in charge of correspondence (letters “sent” and “received”) with the post at For Whipple, Va., and general correspondence relating to the enlisted men of the service one in charge of an order-book, in which is recorded all orders, general and special issued by direction of the Chief Signal-Officer; one in charge of the reports mentione in Section IV under this head, the charge of descriptive book of enlisted men, muster rolls, recruiting-returns, enlistment and other papers relating directly to the enliste men of the signal-service, and two to whom is assigned the miscellaneous work of th rooms.

RULES FOR THE DIVISION IN CHARGE OF THE PROPERTY AND DISBURSING OFFICER.

1. Upon the clerk in charge of the property-division devolves the duty, under th direction of the property-officer, of the immediate supervision and examination of al bills against the central office and the various stations of observation, the preparatio of such bills for vouchers and money-accounts of the office and the correspondenc pertaining thereto, and the prompt rendition of all reports and papers which thi branch is called upon to make at the time designated for such reports, and for th proper record and care of all papers sent to him for action or file.

He is to hold, under the authority of the property-officer, the sergeant appointed fo the purpose responsible for the proper discipline of the men and the neatness of th rooms and desks occupied by them, and the strict performance of all the duties require therein, conformably to the rules and regulations displayed in said rooms.

A daily record of the time of arrival and departure of each man is to be kept an rendered on Saturday of each week to the property-officer, accounting strictly for al tardiness or omissions to report during the period for which the roster is made.

2. All letters, communications, vouchers, and other papers or indorsements receive at, sent from, or forwarded through, this office for official action relating to the mone or property in charge of this office will be placed on record in the office-books, an the action upon them carefully noted.

To insure the prompt and accurate performance of the work, it is assigned in portions, under the immediate direction of the clerk in charge, substantially as follows:

One man has the care of the writing and recording the miscellaneous letters sent, i which are kept copies of all letters emanating from this division; one man is in charg of the “letters-received book,” containing a synopsis of all letters received; on man has the keeping of the “returns of signal-property” from the military post throughout the country, the examination of those returns and the entry in a distinc set of letter-books of all correspondence upon the subject of property-returns, bot sent and received; one man is in charge of the property-account with the observers whose duty it is to keep a record of all property sent from the office against the party to whom it is sent, invoicing the property to the observers in charge of the stations and the examination and correction of the reports of property, which are required to b sent in promptly at the expiration of each quarter by them; one man has the preparation of all vouchers for abstracts, of making up the abstracts and accounts-curren and the property returns, with an assistant to assist in comparing them, as made up before they are transmitted to the accounting officers of the Treasury Department one man is employed in preparing names and subject-indexes for the “letters sent and “received” books; one man has the copying of all the money-papers of the disbursing-officer in the office-books, in which are kept a verbatim copy of each vouche abstract, and account-current, and any paper accompanying the same.

One sergeant, with a corps of assistants, has charge of the preparation of vouche for settlement of all accounts against the office, and is responsible for the proper keeping of all records of disbursements of money on vouchers, together with the settlemen of the pay and commutations of the men serving on stations and in this office.

The receiving, unpacking, packing, and shipping of goods is in charge of a sergeant with a number of assistants, whose duty it is to designate what portion of the work i to be done by each, and to see that it is properly performed.

The duty of preparing matter for the mails is assigned to one man, who is appointe under special orders of this office, whose duty it is to take charge of, and account t the property and disbursing officer for the postage-stamps and stamped envelopes which may be placed in his hands for that purpose.

To economize time and labor a letter-balance is placed in each important room; so that, when a letter is sealed or a package made up, the party making it up may immediately weigh it and mark in pencil upon it the weight thereof. At 1, 2, and 3 p. m. each day these packages will be sent to the stamping-clerk, who will then only have to affix the appropriate stamps according to the weight.

It is positively directed that no official stamp shall be used for private mail-matter.

The machine-shop is in charge of a private with assistants. The man in charge is held accountable for the care and proper keeping of all machines, tools, &c.

The library is in charge of one man as librarian, who is required to keep record of the books coming in and taken out; is accountable for their proper distribution in the cases, and the keeping up of the library catalogue. Any person taking a book from the library will leave with the librarian his name and the title of the book taken. No book so taken will be loaned to any person not connected with this office.

3. Employés will be at their desks at 9 o'clock a. m., and will confine themselves to their respective duties until 3 p. m., except 15 minutes between 12 and 1 o'clock, which will be allowed for lunch.

The keys of all desks will be deposited at the close of each day with the clerk in charge of the room or in a place known to him.

All desks must be equipped with a sufficient supply of stationery, so as to obviate all necessity for one man calling on another for it.

A rigid enforcement of the foregoing will be exacted, and all deviations reported to the property and disbursing officer.

4. No enlisted man of the signal-service will be allowed to sell or otherwise dispose of any portion of his pay accounts, (vouchers for pay and commutation,) nor will he be permitted to draw, (or give orders,) upon this office, or any of the offices connected therewith, without special authority.

5. The following reports from this division are submitted by the Chief Signal-Officer of the Army to the honorable the Secretary of War at the dates and under the authorities set opposite each:

Nature of documents.	By what authority called for.	When to be submitted.
1. A statement of contracts entered into during the year previous.	Act approved April 21, 1808, (Statutes at Large, vol. 2, p. 485.)	Early in January of each year.
2. A statement showing military appropriations, with the expenditure and balance unexpended at the end of the year; with an estimate of probable demands on such balance.	Act approved May 1, 1820, (Statutes at Large, vol. 3, p. 567.)	Early in February of each year.
3. A statement of all moneys expended by War Department disbursing officers during the year.	Act approved August 26, 1842, (Statutes at Large, vol. 5, p. 527.)	In January of each year.
4. The name of clerks and all persons employed, salaries, &c., during the year or any part thereof.	Act approved August 26, 1842, (Statutes at Large, vol. 5, p. 525.)	In January.
5. An inventory of property belonging to the United States in the public buildings and grounds occupied in the District of Columbia.	Act approved July 15, 1870, (Statutes at Large, vol. 16, p. 364.)	December 1,

6. The property and disbursing officer is required to make the following returns of property and money to the officers named, periodically as below:

Nature of account.	To whom made.	Period.
Returns of signal equipments and stores	Chief Signal-Officer	Quarterly.
Returns of equipments and stores belonging to "Observation and reports of storms," &c.	do	Do.
Returns of quartermaster's stores	Quartermaster-General	Do.
Returns of clothing, camp and garrison equipage	do	Do.
Returns of ordnance	Chief of Ordnance	Do.
Returns of medical stores	Surgeon-General	January & July.
Account-current, abstract A, purchases, abstract B, expenditures, vouchers to abstracts A and B.	Third Auditor	Monthly.

7. The several varieties of the weather-maps will be sold at the following prices:

Maps in one color, without reports or isobaric lines, 1½ cents each.

Maps in two colors, without reports or isobaric lines, 2 cents each.

Maps on manifold paper, without reports or lines, in books of 100 each, $2.75 per book.

Maps in one color, with current reports, and isobars, 2 cents each.

Maps in two colors, with current reports, isobaric and isothermal lines, 3 cents each.

Postage on each map one cent additional, except the manifold ones, on which it will be 28 cents per hundred.

The publications other than maps will be supplied until further notice upon the receipt of the amount of postage on each, as follows:

Annual report	24 cents.
Circular on the Practical Use of Meteorological Reports and Weather-Maps	10 cents.
Monthly Weather Review	1 cent.
Weekly Chronicle	1 cent.

All remittances, in payment of subscriptions to, or for the purchase of, maps, or in payment of postage on maps or other publications of the office, made by draft or post-office money-order, must be made payable to the property and disbursing officer of the office.

ULES FOR THE DIVISION OF THE RECEIPT, RECORD, AND PUBLICATION OF WEATHER-REPORTS.

I.—OBSERVER'S ROOM.

DAY-OBSERVERS.

Office-hours from 8.15 *a. m. to* 3 *p. m.*

1. The observer in charge of station will have immediate supervision of the examnation and filing of mail reports from the several signal-stations, of the correspondence vith these stations on matters of routine duty, and of all observers and assistants on tation duty in this office. He will be held responsible for the proper discipline of the nen, and the cleanliness of the several rooms used for station purposes, and for the roper performance of all duty done therein. He will keep a daily record of the time f arrival and departure of each man under his charge, and on Saturday of each week ender a return of the same to the officer in charge of stations, accounting properly for ll delays or failures to report during the week. He will report on Form 24 the numer of maps, weather and post-office bulletins issued each week, classifying them acording to time of issue, and see that the entries in the daily record are promptly and roperly made. He will make out the monthly meteorological chart and the monthly neans on Form 22. He will be responsible for the proper and punctual mailing of all natter ordered to be sent by mail from the station-room, and will attend to the shipnent of all anemometers and self-registering attachments issued to the several stations, nd to such other duties of a general nature as may be assigned to him from time to ime. To secure the prompt performance of office-work, it will be distributed under is direction substantially as follows: One man in charge of correspondence and eneral clerical work; one man in charge of the special-bulletin book, in which all reorts are copied from the Forms 4 received by mail from the several stations of obserration. This man must be an instructed observer, and he will also make and record all he regular observations taken between the hours of 8 a. m. and 3 p. m. One man for eneral duty, such as briefing, indexing, and filing station reports, copying records, &c. One man charged with the duty of changing the large weather-map in hall of office, iling and distributing printed weather-maps in the office, and enveloping those sent ut by mail.

1. A correct list will be kept by the observer of all persons and institutions supplied vith maps, bulletins, Monthly Weather Reviews, and Weekly Weather Chronicles as nailed therefrom, with the local address of each. He will also keep a complete list of ffices furnished with the printed Synopsis and Probabilities, with the names of the everal distributing centers from which they are supplied.

3. In addition to the regular-station records, the following will be kept in suitable orm for convenient reference:

All extracts from logs of vessels received, with name of each vessel and party from vhom received.

Cautionary-signal record, as specially reported by the observers.

Location of the signal-office at each station, with position and elevation of the everal instruments.

Bench-marks at the various river-stations, with changes in same when made at any ime.

All marine records received, with name of vessel and party from whom received.

All casual reports and meteorological memoranda received from voluntary correpondents and sent to the observer's room for file.

Time of receiving post-office bulletins at the various offices.

The daily journal will be carefully and fully kept up.

4. All work must be promptly done and not be allowed to accumulate from day to ay; all station-reports will be carefully examined and compared, and when errors are ound, the observer at fault will be notified immediately, in order that the proper corection may be made as soon as possible.

5. On the first day of each month the observer in charge will examine the checkook of reports, and call upon all delinquents for such as have not been received at hat date, if sufficient time has elapsed for their receipt by mail.

6. Smoking will not be allowed in any of the office-rooms.

7. The records in charge of the observer will not be taken out of the room in which hey are habitually kept, without the authority of the Chief Signal-Officer.

8. The regular-bulletin book for each month, when filled, will be deposited in the ffice library for safe-keeping and convenience of access.

9. On the first of January, April, July, and October, respectively, of each year, the le copies of the printed weather-map will be counted out in quarterly volumes by the bserver, and turned over to the property-officer for binding.

10. One observer-sergeant and two assistants will be charged with the translation

and record of the morning telegraphic reports. The observer will translate the reports
rapidly as they are received from the telegraph-room; one assistant will enter the r
ports, as translated on Form 3, making the required number of manifold copies, and wi
fill up the columns of barometric and thermometric changes during such intervals as occu
in the receipt of reports. The second assistant will write three copies of the translate
reports on manifold paper for distribution as follows: One for use of the officer makin
out the Probabilities; one for use of assistant in changing the large weather-map
hall of building; and one for use in printing-office, and such additional copies as ma
be ordered from time to time. These translations will be distributed promptly by th
messenger charged with their delivery, and each sheet must show the time of the fir
and last entries upon it. If there should be any delay in the receipt of reports whe
a sheet is partly filled, it will not be held for completion, but will be torn out at one
and sent to the parties for whom it is prepared, in order that their work may not
delayed by any fault in this office.

11. Back reports will not be entered in Form 3, but will be translated as receive
and manifold copies made and distributed in the same manner as current ones. The
will be copied into the bulletin-book in *red* ink under the proper date.

12. The observer in charge of the translation of reports will be responsible for the
prompt and correct entry in the bulletin-book, and will see that such entry is mad
before the expiration of the regular office-hours each day.

13. The morning bulletins will be torn out at 10.30 a, m.. or upon notification fro
the telegraph-room that the circuits are closed, except on Sundays, when the time ma
be extended, in case of necessity, to 11 a. m. At ten minutes before 10 o'clock eac
day, one copy of the bulletin, as written up to that time, will be torn out and se
promptly by messenger to the printing-room. If the reports are not all entered by th
time, another copy will be sent to the printer as soon as they are received, and th
bulletin completed. One copy of the complete bulletin will also be posted in the hall
the office, and all those for local distribution by messenger will be sent to the officer
charge of stations. Those for foreign correspondents will be kept with the afte
noon and midnight bulletins, and mailed in packages semi-monthly to the proper a
dress. Those for distribution by mail in this country will be properly addressed an
mailed with the regular office-mail daily.

14. The observer in charge will make out a list of telegraphic errors at each repor
and send it to the officer in charge of stations, with the copies of the bulletin intende
for his use.

NIGHT-OBSERVERS.—FIRST RELIEF.

15. The observer in charge of this relief, with one assistant, will report prompt
each day at 4 p. m. and remain until 12 p. m., or until relieved by the sergeant
charge of the second relief.

16. The assistant charged with the special duty of writing the manifold copies f
use of the Probability and printing rooms will report at 5 p. m., and remain until th
Synopsis and Probabilities are ready for issue when he will distribute the copies amon
the Associated Press agents authorized to receive them. He will return to the office
11.15 p. m., and remain until the midnight Probabilities are ready for issue, when
will distribute copies of the same as follows: One copy to Daily Chronicle, one to Nation
Republican, one to New York Associated Press, and one to the American Press As
ciation, and such other places as may be designated from time to time.

17. The time of receiving the midnight copy for distribution will be noted on th
proper form, and also the time of its delivery to the press agent. The utmost dispatc
must be used by the assistant in performing this part of his duty.

18. The observer will be responsible for all observations made during his tour
duty, for the discipline of all enlisted men and all messengers then on duty in th
buildings, except those in the telegraph-room, and, in his capacity as watch-sergean
for the safety of the buildings and the public property therein. He will translate th
afternoon reports as received, and his assistant will write the bulletins as the repor
are translated, making the changes in the barometer and thermometer at such tim
during the work as there may be delay in the receipt of reports. The bulletin-boo
will be properly and promptly filled under the supervision of the observer, and a
back reports entered in red ink under their proper dates. River-reports will be e
tered and the changes recorded in the special-bulletin book provided for this purpo
The manifold copy of reports for the officer in charge of the Probabilities will be se
to his room as fast as each sheet is translated, and if any delay occurs in receiving th
reports, all on hand at the time of such delay will be sent down without waitin
for enough to fill the sheet.

19. The large weather-map for displaying the afternoon reports will be changed re
ularly by 7.45 p. m., and the same care taken of the symbols and tags as prescribed f
those used on the other two maps. One copy of the bulletin will be posted in th
office-hall as soon as completed, and one copy for the officer in charge of stations, an
one for the printing-room, placed in their proper envelopes, and retained for delive

the next morning with the midnight bulletins. All other copies will be left on the desk of the observer in charge of the station for proper distribution next day.

20. All nine o'clock reports received by telegraph will be entered in the bulletin-book provided for that purpose, and a copy of them sent to the Probability-room.

21. All time not required for the performance of regular station-duties will be occupied in addressing envelopes from lists furnished by the sergeant in charge of station, and especial care must be taken to write the addresses plainly and distinctly.

22. All reports received before midnight will be translated, distributed, and recorded promptly.

23. The observer in charge will keep a record of the time at which each man reports for duty, and will turn over this record on Saturday of each week to the sergeant in charge of station.

24. Smoking will not be allowed in the office during the hours of duty.

NIGHT-OBSERVERS.—SECOND RELIEF.

25. The observer and assistant on this relief will be on duty from midnight until 8 a. m., or until relieved by the arrival of the watch-sergeant in charge of the day tour of duty, or by proper authority. The observer will take charge of the translation of reports promptly on time, and will be held responsible for their prompt delivery in the Probability-room in the manner already prescribed for the afternoon report. He will translate the reports as received from the telegraph-room, while one assistant enters them on the bulletin, and the other makes the manifold copies for the Probability-room.

26. After the reports are all received and translated they will be entered in the bulletin-book, all back dates being entered in red ink in their proper places.

27. One copy of the bulletin will be posted on the bulletin-board in the office-hall, and one for the officer in charge of station and one for the printing-room will be put in the same envelopes with the copies of the afternoon bulletins remaining, and placed, with the other copies made, upon the desk of the sergeant in charge of station, or in such other place as he may designate.

28. The large weather-map of the midnight reports in the office-hall will be promptly and properly changed, and the same care taken with symbols and tags as prescribed for the other two maps.

29. During the receipt of the midnight reports, the manifold copy for the Probability-room will not be delayed at any time over one minute.

30. In addition to the work of translating and recording reports, the observer will see that the envelopes used in distributing the post-office copies of the printed Synopses and Probabilities are plainly addressed, and that the inclosures are folded and sent to the post-office in time for the earliest morning mail that leaves the city. He will also assist the printer in reading the proof of the Synopses and Probabilities whenever notified that it is ready. The assistant who carries them to the post-office may then be excused from duty for the remainder of the night, except on Saturday nights, when the post-office bulletins not being printed he will remain during the full hours of duty. The observer in charge of its relief will be held responsible as watch-sergeant for the safe-keeping of the buildings and property connected with the office, and for the discipline of the enlisted men on duty with him or in the buildings at the hours when he is in charge. He will be governed, in case of fire, and in reference to the supervision of the watchman, by the general instructions that follow.

31. Smoking will not be allowed in the office-room during the hours of duty.

GENERAL INSTRUCTIONS.

32. Each observer in charge of a relief will assure himself by personal inspection, when going on duty, that the fire-extinguishers, fire-buckets, and axes are in their proper places, and ready for immediate use. He will see that all the men on duty during his tour are carefully instructed how to act in case of fire, and will, in the event of such an occurrence, immediately send a messenger to notify the nearest officer connected with the office of the fact. If the fire, when discovered, is of such extent that it cannot be extinguished by the means available in the office, the alarm will be turned on from the box (No. 68) attached to the building, and every possible precaution taken to subdue the flames before the arrival of the engines. If the fire should get so far under headway that the destruction of the building is to be feared, prompt measures will be taken to remove to some place of security as much public property as possible, but especially the office-records and meteorological data. To enable this to be done intelligently, and without loss of time, the observers in charge of both night-reliefs will inform themselves as to the location of these records and documents in order that access may be had to them in case of necessity with the least possible delay. A duplicate key to the fire-alarm box will be intrusted to the night-watchman who goes on duty at 6 p. m. daily, and will be transferred by him to his successor at midnight. The key to the

watch-clock will be given to the watchman once every hour, to enable him to make his regular round of duty, and will be reclaimed from him after each round. If the watchman fails to apply for the watch-key fifteen minutes before any hour during his tour of duty, the observer will ascertain at once the cause of delay, and take proper measures to prevent its repetition.

33. The duplicate key to the fire-alarm box and the key to the watch-clock will be left each morning on the desk of the officer in charge of stations.

34. In changing the large weather-maps, two sets of tags will be provided, to be used alternately. When one set is taken off, the pencil-marks upon the several tags will be removed with a moistened sponge, the tags dried and kept for use the next day. Care must be taken to write the reports accurately upon the tags, to put the proper weather-symbols at the various stations, and to change the date of report by means of the calendar over each map.

35. A record of telegraphic errors noted in translating will be kept by each observer in charge, and inclosed with the bulletin for the officer in charge of stations, to whom report will also be made of all errors or omissions on the part of any of the men on duty with him.

II.—TELEGRAPH-ROOM.

1. The telegraph-room will be under the immediate supervision of the electrician of the signal-office, who will be held responsible for the discipline of the operators and clerks therein; for the proper discharge of their duties, and for the proper record and care of all papers and reports sent to him for action.

2. Office-hours are from 7.45 a. m. to 1.30 a. m., or until the midnight report is disposed of, and the caution—"good-night"—sent.

3. The electrician will so arrange his working force that at least one operator will be present for duty at all times during office-hours, as given in the preceding paragraph.

4. He will divide the working hours into reliefs of as nearly equal length as possible, and have the operators alternate weekly in the day and night reliefs and the receipt of signals or weather-reports.

5. He will receive from the property and disbursing officer all telegraph-bills sent to this office for settlement, and after carefully and promptly auditing the same will return them with suitable remarks to that officer.

6. The general duties of the operators will be substantially as follows:

a. Receive and transmit all weather-reports and messages, including the Synopses and Probabilities sent to or from the office.

b. Enter all reports received on the regular check-sheets, and all telegrams sent and received in the books of "telegrams sent" and "telegrams received," respectively.

c. Keep wire record during receipt of reports, and also record of special weather-service.

d. Enter all check-sheets, special weather-records, and cautionary-signal orders in the books provided for these respective records.

e. File wire reports.

f. Prepare list of stations from which reports are missing at close of circuit.

7. The general duties of the clerks will be as follows:

a. Examine the mail copies of Form 5, and compare them with the telegraph copies, noting all errors, and reporting the same to the electrician.

b. Keep a record of the receipt of all mail copies of Forms 2, 5, 19, and "B," and call on the proper observers for any missing copies, using the regular letter form for this purpose, and submitting it for signature and entry to the officer in charge of stations.

c. Examine and file Forms "B" and 19, noting all errors, and reporting them to the electrician for the proper action.

d. Examine and compare statements of circuit-work performed by the several telegraph companies for the office, and report all discrepancies or errors to the electrician.

e. Keep record in proper books of all irregularities discovered.

f. File all reports in their proper places in such a manner that any one of them can be easily and quickly found.

8. Cautionary-signal orders, Synopses and Probabilities, and telegraphic orders to observers in reference to station duties will be signed by the officer in charge of stations. Other telegrams will be sent in the regular business manner.

9. The manifold copy of reports received will be sent promptly to the translating-room, and if there should be any delay in necessary reports after a sheet has been commenced, the operator will not wait to get the sheet full, but will send to the translator all on hand when the delay occurs.

10. Copies in manifold of all reports received between the regular reporting-hours will be sent to the translating and probability rooms, and to the officer charged with the preparation of the Weekly Weather Chronicle, &c.

11. When the regular circuit between New York and Chicago is broken, or communication so interrupted as to delay the transmission of reports between those points, the observer at Chicago will be directed to send them *via* Cincinnati if the delay occurs at

ither the morning or afternoon report. If at the midnight report, the observer in Cincinnati will be directed to forward them to this office with his regular reports.

12. In the event of serious delay in the receipt of reports from New York over the egular circuit, the observer there will be directed to forward them by any other available route.

13. Operators in the regular New York circuit will be instructed at any time to divide the circuit whenever such a course would facilitate the transmission of the reports, nd at such points as may be thought advisable by the electrician in this office.

14. The electrician will notify the proper officials of the several telegraph companies f all delinquencies on the part of their employés in connection with the transmission f signal business, keeping full copies of all letters sent in the book provided for that purpose.

15. All errors noted in observers' reports will be brought promptly to the attention f the officer in charge of stations for proper action.

16. Smoking will not be allowed in the telegraph-room.

17. Visitors will not be allowed in the room without permission from one of the commissioned officers on duty in the office, or from the electrician.

18. Enlisted men and clerks on duty in this office will not be permitted to enter the elegraph-room, except in the discharge of their duties, without proper authority, and will in all cases transact their business promptly and quietly, and leave the room without disturbing the operators more than is absolutely necessary.

III.—LITHOGRAPHIC-ROOMS.

Office-hours from 8.30 *a. m. to* 3 *p. m.*

1. The rooms will be under the immediate supervision of a sergeant, who will be held responsible for the discipline of the enlisted men employed therein, for the prompt and regular performance of their duties, for the police of the rooms, and for the proper care of the public property required in the discharge of his duties.

2. The sergeant in charge will keep a roster of all men on duty in the lithographic-room, and will note, daily, the time of arrival of each man, reporting the same weekly o the officer in charge of stations, with such remarks as may be necessay to account or neglect of duty or absence during office-hours. In case of sickness, the certificate f one of the surgeons on duty at the United States dispensary in this city must be procured and filed with this weekly report.

3. All transfers will be made by the sergeant in charge, or under his personal direction, and the original from which the transfers are made will be carefully preserved nd filed away for convenient reference. He will also attend in person to drawing ransfers, pulling proofs and dampening paper, and will make a check daily, showing he number of maps printed of each issue, with time of receipt of copy and of delivery o printers. This check will be delivered to the officer in charge each afternoon.

4. The large press will be used exclusively for printing the isobars and isotherms, nd worked by two men, who will not be called upon to perform any other duty. The maps as struck off will be turned over to the printing-room on application.

5. One press will be set apart for making transfers and doing such small jobs as may be required from time to time. One will be used for the file copies of maps printed in wo colors, and the other for printing the green maps for regular issue, of which each man will be required to print an average of three hundred copies daily.

6. The first duty of the men on reporting in the morning will be to scrape the rollers, clean the ink-slabs, and remove the resin from the transfers preparatory to printing the plain maps.

7. After the required daily number of maps has been printed, the men will again clean the ink-slabs, varnish the rollers, clean the presses, knives, and other implements used about the presses, besides rubbing out and strengthening transfers, leaving everything connected with their work in a clean and orderly condition. In addition to this, ach man must, in turn, sand, polish, and deliver to the transferrer all stones that are injured under his hands.

When it becomes necessary to use one of the regular printing-presses for making ransfers, the man in charge of the press will, during the time of its use for this purpose, occupy himself in sanding and polishing as many of the stones as practicable.

8. The transfers of all isobars and isotherms for the current issues of maps must be made with the least practicable delay, all other work giving way to this. The copies s struck off will be delivered promptly to the printing department for completion.

9. All errors noted in the originals furnished for copy will be promptly referred to he officer in charge of stations.

10. Care will be taken to make the lines and lettering on the maps of uniform size, rom day to day, and to avoid blotting or otherwise soiling the paper.

11. All requisitions for paper, ink, and other material must be made in time to prevent the supply on hand from becoming exhausted, and will be made through the of-

ficer in charge of stations, when he is present. In his absence, such requisition wi be made directly to the property and disbursing officer.

12. On Saturday of each week all maps on hand not required for use in this offi will be turned over to the property-officer, with a check stating the number of san and date of delivery.

13. The proof of each transfer must be carefully compared with the original befo any copies are printed for issue, and all errors found therein promptly corrected.

14. All orders for work in the lithographic-rooms will be given through the officer i charge.

15. Rooms and presses must be kept clean and in orderly condition, and all wor promptly done.

16. No smoking will be allowed in the rooms during office-hours.

17. Enlisted men on duty in other parts of the office will not be permitted to ent the lithographic-rooms without proper authority.

IV.—PRINTING-ROOM.

DAY-WORK.

Office-hours 8.30 *a. m. to* 3 *p. m.*

1. The sergeant in charge will be held immediately responsible for the discipline the men employed in the printing-room, for the prompt and accurate performance their duties, for the police of the room, and the care of all public property therein. H will distribute the work among the men in such manner as will best secure its per formance, and will see that all proofs are carefully compared with the originals an errors corrected before any copies are struck off for issue.

2. As a general rule the different men will be kept at that part of the work wit which they are most familiar; but care must be taken that all are sufficiently in structed in the several duties of the room to be able to take hold of any one of them i the absence of the man specially charged with such duty.

3. Regular copy will be delivered to the sergeant in charge at about the followin named hours daily:

Bulletins for afternoon and midnight maps of day previous by 8.45 a. m.
First reports for a. m. map at 9.15 a. m.
Changes for a. m. map, 9.45 a. m.
Synopsis for a. m. map, 10.15 a. m.
Probabilities for a. m. map, 10.30 a. m.
Weather Chronicle, 11 a. m.

The copy of the "Facts and Verifications" will be received at irregular hours, bein delivered as rapidly as prepared by the proper officer.

4. A list will be kept by the sergeant in charge of the number of copies of th Weather Chronicles and of each issue of the map required daily, and of the number o copies required of all other publications. This list will be printed and posted in th room, near the desk of the sergeant in charge.

5. All proofs of Weather Chronicle, Facts and Weather Review will be marked i pencil with the name of the sergeant in charge, and sent over promptly to the office in charge of room for proper disposition; when returned the proof will be checke with the name of the officer responsible for its preparation. All other proof will b sent to the same officer, but need not be checked.

6. The morning map will be sent to press in time to have enough copies struck o by 11.30 to supply the Baltimore station, and these maps will be sent without delay t the Baltimore and Ohio Railroad depot in time to leave the city on the noon train.

The other copies for the regular issue will be printed as rapidly as practicable, an those for the office use and local distribution issued as soon as a sufficient number ha been printed. Those for mail distribution will be folded in the printing-room by man charged with that special duty, and properly prepared for the mail.

7. The regular and prompt issue of the tri-daily weather-maps is the principal wor of the printing-room, and no other work will be permitted to interfere with or de lay it.

8. A record will be kept by the sergeant in charge of the time at which each ma reports for duty daily, and of the causes of delay or failure to report. This record wil be handed to the officer in charge on Saturday afternoon of each week. In cases o sickness the certificates of the fact from one of the attending physicians at the Unite States dispensary in this city must be procured and filed with this weekly report.

9. All requisitions for paper, type, ink, and other necessary materials will be mad through the officer in charge of room, when present, and, in his absence, to the prop erty-officer in person. These requisitions must be made in time to prevent the suppl of any article from becoming exhausted, and delay of work in consequence.

10. Three skeleton copies of each map will be struck off for use of the lithographe

who prepares the small maps for publication, with the monthly issue of facts. These maps will be filed by the sergeant in charge until called for by the office librarian, to whom they will be transferred on application.

11. A detailed record will be kept by the sergeant in charge, in a book provided for that purpose, of all work done in the room.

12. Smoking will not be allowed in the printing-room during office-hours.

13. On Sunday and official holidays the only work required, except in special cases, will be the issue of the authorized number of maps, as indicated from time to time.

NIGHT-WORK.

14. Office-hours will be from 11 p. m. until the post-office copies of the "Synopsis and Probabilities" are printed, properly enveloped and addressed, and sent to the post-office.

15. The "Synopsis and Probabilities" will be printed on flat letter-paper, and issued every morning, except on Sundays, in time to be sent off by the earliest morning mail leaving the city, as ascertained from the city postmaster.

16. The assistant to the night-observer will assist in putting up the copies for mail, and will carry them to the post-office in accordance with instructions already given.

17. Two copies of the "Synopsis and Probabilities" will be printed and mailed to each post-office on the list furnished for the information of the printer. In addition to the copies for mailing, ten copies will be printed for file, and kept by the sergeant in charge until called for by proper authority, and two copies for the officer in charge, and left on his desk by 9 o'clock each morning.

18. The night-printer will clean up and distribute the type used by him, clean the press, and cut the paper required for his work.

19. If the man charged with this duty should be taken sick during the day, or be unable from any other cause to perform it, he will promptly notify the sergeant in charge of the fact, in order that proper arrangements may be made to have the work done by some other man. If the sergeant in charge should have left the office before the receipt of this information, it will be communicated to the watch-sergeant on duty at the time, who will notify the first man on the list of printers furnished him by the sergeant for this purpose.

RULES FOR THE PREPARATION OF SYNOPSES AND PROBABILITIES.

I.—FOR THE GUIDANCE OF ALL OFFICERS, ASSISTANTS, AND OTHERS CHARGED WITH THE PREPARATION OF SYNOPSES AND PROBABILITIES.

1. The first or opening sentence of the Synopsis must always *employ a verb*, and the verb must be *in the present* or *past tense, e. g.:*

SYNOPSIS.—The barometer *has fallen* (or *is falling*) in the Northwest, &c.

The first or opening sentence of the Probabilities *must always employ a verb*, and this verb must be in one of the *future tenses*, or must distinctly refer to the *future, e. g.:*

PROBABILITIES.—In the Northwest the barometer *will rise*, or *will probably rise*, or *will have risen* by Monday, &c.

2. Attempts to devise new expressions in the weather-bulletin will not be made, and other terms than those heretofore employed to express meteoric conditions will not be used until after submission to the Chief Signal-Officer. The following expressions are approved for the occasion to which they are appropriate, viz: *Partly* (not *partially*) *cloudy* weather; *conditions indicate* (instead of *are favorable for*) *severe local storms: areas of rain* or *rain-areas* or *rain-belts; low barometer* or *storm-center* or *storm-area*; *telegraphic reports*, or *regular* (or *usual*) *morning* (*afternoon* or *midnight*) *telegraphic reports from* ——— *have not yet been received*, (or *are missing.*) "*Cautionary signals are ordered for*, or *continue at*" ——— instead of "Warning signals" or "Signals continue at ———." The expression "dangerous winds are not anticipated," will not be used. In expressing the changes in the direction of wind, the words "*veering*" and "*backing*" will be used whenever possible. The Synopses and Probabilities will be condensed as much as possible; and in order to provide against misconstruction of sentences through telegraphic errors, &c., in the Synopses, the sentences will be made to end with the name of a district or districts, when possible; but in the Probabilities, the sentences will be commenced with the words "for," "in," or "from," followed by the name of district, *e. g.:*

Synopsis for past twenty-four hours.

The barometer has risen over New England and the Middle States. It has fallen somewhat over the Gulf States and the Northwest. Partly cloudy weather and rain-areas have prevailed over South and Middle Atlantic States, with light to fresh easterly to southerly winds, which continue over former. Clear weather and light winds now prevail over New England, northern portion of Middle States, and from central Gul to Lakes Erie and Michigan and Eastern Iowa. Telegraphic reports are missing from stations in Texas, Upper Michigan, Minnesota, and west of Omaha.

Probabilities for coming twenty-four hours.

In New England and the northern portion of the Middle States clear weather and light to fresh winds will prevail. From New Jersey and Eastern Pennsylvania to Florida partly cloudy weather, rain-areas, and light to fresh northerly to easterly winds. From Tennessee to Lakes Erie and Michigan clear and partly cloudy weather. For the Northwest pressures diminish somewhat, with easterly to southerly winds.

3. Special attention will be given in preparing Probabilities to those divisions of the country in which post-office bulletins are distributed, giving as minutely as possible the meteoric changes to be expected within the specified time.

4. Predictions for more than twenty-four hours in the future are only to be made in cases of special importance.

5. In the morning (10 a. m.) Probabilities, special attention should be given to the ensuing twelve hours, and not to the weather of the following day.

6. In the afternoon Probabilities special attention should be given to the Southern States, and other districts where the midnight press report is not published.

7. The individual States, Territories, and lakes, &c., may be mentioned by name in the Synopses and Probabilities when the weather reports justify such minuteness, otherwise the more general geographical divisions of the country are to be mentioned; and in doing this the following terms only are allowed, with the significance given them on the map of geographical divisions, *i. e.:*

Divisions.

1. Pacific States.
2. Extreme Northwest.
3. Northwest.
4. Southwest.
5. Southern States.
6. Lake region.
7. Middle States.
8. New England States.
9. St. Lawrence Valley.

Subdivisions.

1. Missouri Valley.
2. Upper Mississippi Valley.
3. Lower Mississippi Valley.
4. Ohio Valley.
5. Western Gulf.
6. Eastern Gulf.
7. Upper Lakes.
8. Lower Lakes.
9. South Atlantic.
10. Middle Atlantic.

8. For each section mentioned in the Probabilities there will be given, if possible, the expected condition of the pressure, temperature, wind and weather.

9. When the readings of barometers are known to be constantly too high or too low, (from erroneous elevations, &c.,) the assistants making the Probabilities will agree upon the differences to be applied to them, so that the curves may appear to have been drawn by the same person.

10. In making up the Synopses special attention will be given to the *divisions* of territory, and care taken to give the *direction* in which the disturbances named are moving.

11. They will prepare, daily, a statement of those portions of the Probabilities, worked up the previous day, verified, those partly verified, those non-verified, and those considered doubtful. In case they have been fully verified, it will only be necessary to state "Fully verified."

12. They will also enter on the schedule of "Cautionary Signals" the letter V, for signals verified at the station; *j.* for signals justified by reports from neighboring stations; *i*, for signals not justified.

II.—FOR THE GUIDANCE OF THE OFFICER, ASSISTANT, OR OTHER PERSON CHARGED WITH THE PREPARATION OF THE SYNOPSES AND PROBABILITIES FOR PUBLICATION.

1. He will be at the office by 9.30 a. m. and 6.30 and 11.20 p. m. of each day. On the maps used for preparing the press-reports for public issue, the observations received before the completion of the Probabilities will be entered with a *black* pencil; those received afterward with a *blue* one. He will examine the reports carefully, with a view to discover telegraphic errors, make a note of all, and call upon the telegrapher for corrections, when these are necessary, and they can be received. The telegrapher on

duty will be instructed by the officer in charge of stations to call for such corrections promptly, whenever they can be made in time to be of immediate use in the preparation of the Probabilities.

2. In order that he may be responsible for the isobars and isotherms on the maps issued from this office, he is strictly required to draw upon the maps used in preparing the Synopses and Probabilities his own isobars and isotherms in full lines of different colors, (blue and red,) except when there is any doubt, when they will be broken lines, thus: — — — —, and in doing so, to space the distance between the stations as accurately as possible. This duty must not be delegated. He will not carry the isobars and isotherms westward of the one-hundredth meridian.

3. The river-reports will be entered on the special form for that purpose, and the changes will be briefly noticed in the Synopses and Probabilities. Whenever the changes are greater than five (5) inches, he must state—"The rivers have risen (or fallen) at"—[here give the names of the stations,] or decidedly risen (or fallen) at ———; or give the number of feet when the change is remarkable. It is in the view of the Chief Signal-Officer, that the Probabilities issued from this office shall eventually comprise statements as to the probable condition of rivers, based upon the facts which will be given in the Synopsis.

4. He will add daily to the file copy of the 1 a. m. Probabilities only, "*Special for Washington, D. C.,* ——— ———," and on Sundays also to the copies sent to the Washington, D. C., newspapers.

5. He will read and verify or correct the manifold copy of the Synopses and Probabilities, and attach his initials to the same, after such verification and correction.

6. The full Synopsis and Probabilities for the 7.35 (11) a. m. report will be sent to the officer in charge of the printers as soon as completed, and not later than 10.30 a. m. A single copy of the Synopsis alone will be sent to the same officer by 10.10 a. m.

7. He will call upon the officer in charge of stations for intermediate observations to be taken by the observers and forwarded to this office whenever necessary.

8. He will be held responsible for the true tracing, upon separate maps with black pencil, of the isobars and isotherms from which the lithographers make copies, and after having completed them, will write the letter *I* in blue color on the lower right-hand corner of the original maps, and attach his initials to the tracings.

9. The tracings from the original maps of the 7.35 a. m. and 4.35 p. m. and 11 p. m. reports will be made, whenever practicable, immediately after the completion of the Probabilities deduced from the reports.

Those for the morning report will be sent to the officer in charge of the lithographic-room by 10.45 a. m. daily. Those for the other two reports will be handed to the watch-sergeant on duty, who will send them to the lithographic-room by 8.30 a. m. of the succeeding day. The only exception to this rule will be made when, through failure of telegraphic communication, a sufficient number of reports are not received to make reliable isobars and isotherms, in which case the tracings of the afternoon and midnight maps may be delayed until the map for the next morning is completed.

10. On a list of the names of stations those from which reports have been received in time for use in preparing the Probabilities will be ruled out by the clerk as he enters the reports on the maps. These lists will be verified by the officer in charge of the Probabilities, and he will attach his initials thereto after such verification, and send the same to the officer in charge of the printers immediately after the tracings of the isobars for the respective maps.

11. After having written the total and partial verifications and non-verifications, and those which are doubtful, for Probabilities, he will write the letter *V* in blue on the press-report and lower right-hand corner of the map from which, together with the preceding maps, the current report was worked up.

12. Two files of the press-reports will be kept; with one the *total* verifications, partial verifications and non-verifications, and the doubtful portions; with the other, only the partial verifications and non-verifications, and the doubtful portions. The former file to be sent every morning at 11 a. m. to the private office of the Chief Signal-Officer; the latter to the officer, assistant, or other person in charge of the preparation of the Facts.

13. Cautionary signals will be ordered to be displayed at a signal-station whenever the officer in charge on the subject considers it probable that there will be experienced within twelve hours at that station, or within one hundred miles thereof, and on any navigable stream, a wind dangerous to navigation.

By dangerous winds on the navigable water will be understood those reaching a velocity of twenty-five miles an hour, as registered by the anemometer on the land, provided that the temperature be decidedly above freezing. For temperatures decidedly below freezing and for foggy weather, winds will be considered dangerous when the velocities are registered as low as twenty miles. The direction of the wind will not be taken into consideration for the present.

If at the regular tri-daily report next following the ordering up of the signals it appears that the danger is not so imminent as was apprehended, the signal will be ordered down. The signal will not be displayed for an indefinitely long space of time.

The immediate area referred to by the respective cautionary signals will be as defined on the map of cautionary-signal stations at this office, which may be generally described as a circle with a radius of one hundred miles, the station being the center.

14. Should it be found necessary to issue signal-orders, after having written the number, day, date, time, and names of the stations for "Up signals" or "Down signals" on the proper form, he will read the *number, day, date, time,* "*up*" or "*down,*" and *names of stations* to his clerk, the latter copying the same in the "signal-order book;" the former checking the names successively with a cross (×) above each on the original form as he reads them.

In order to verify the above, the clerk will read the *number, day, date, time,* "*Up signals*" or "*Down signals*" and *names of stations* from the original form, checking the names successively with a dash (—) beneath each, while the assistant, taking the "Signal-order book," will check the names successively with a cross (×) as the former reads them when verified, and will sign his name. The original form will then be sent to the telegraph-room, and the changes will also be indicated on the "Cautionary-Signal Stations" board.

15. At midnight, after completing the "press-report" and issuing the necessary signal-orders, if any, the "good-night" will be filled up, copied in the "Signal-order book," verified, and then sent to the telegraph-room.

16. On the last day of each month a list of the stations at which corrections are applied to the readings of the barometers, due to eroneous elevations, &c., with the corrections applied to same for the month, will be made up, and a copy furnished to the Chief Signal-Officer or the officer in temporary charge during his absence.

17. Whenever the conditions may be such as to indicate unusually dangerous weather on the Lower Lakes or in the Dominion of Canada, including New Brunswick, &c., he will transmit messages to Professor Kingston, observatory, Toronto, Canada, on the usual form, in the following cipher. The following words will be used for districts:

Collingwood	(for Georgian Bay.)
Saugeen	(for Lake Huron.)
Kingston	(for East Ontario.)
Toronto	(for West Ontario.)
Stanley	(for Lake Erie.)
Montreal	
Quebec	
Farther Point	
Gaspe	
Bathurst	
Shediac	(for north N. B.)
St. John	
Pictou	(for north N. S.)
Halifax	
Sidney	

The cipher words for time and date, in the cipher-book last issued from this office, will be used for the time when a storm may be expected, thus: "Storm (or severe storm) Saugeen, Collingwood, Stanley cash Toronto gaul Kingston neck Montreal Quebec cat," by which it will be understood that storm (or severe storm) is expected to reach Saugeen, Collingwood, and Stanley between 7.35 a. m. and 4.35 p. m., (Washington time,) on the 10th; Toronto, between 4.35 and 11 p. m., on the 10th; Kingston, between 11 p. m. on the 10th and 7.35 a. m. on the 11th; Montreal and Quebec, between 7.35 a. m. and 4.35 p. m. on the 11th. When danger is past, or no longer threatens any Canadian station that has been warned, a dispatch will be sent to Professor Kingston containing the following words:

1. Safety.
2. Name of station or stations.
3. Date and time, (cipher word.)

He will make copies of these messages in the same form for file, reading and verifying or correcting them, as prescribed for the verification of the "signal-orders" issued.

18. At any time when an officer, assistant, or other person at this office charged with the duty of preparing the Synopses and Probabilities for issue to the public, may be relieved from that duty, either temporarily or otherwise by another, the latter will meet the former when he shall be engaged in the preparation of his last bulletin, and fully learn the views which guide him in its preparation.

19. The assistant charged with the preparation of "Facts" for publication will prepare the remarks as to verification of Probabilities to accompany them and also the Weekly Weather Chronicle and the Monthly Weather Review. He will, as part of his regular duties, also study and analyze the river-reports received, and prepare for the Weekly Weather Chronicle a synopsis of the rise and fall of rivers, stating, so far as practicable, the present condition of the several rivers reported upon, and that prob-

bly to follow the conditions reported. In the Monthly Weather Review he will pre- ent a summary of the facts in relation to the different rivers for the month then past.

20. The manuscript copy of the Facts and Verifications will be prepared as rapidly as he maps and reports can be examined, and must be furnished for printing, if practica- le, within three days of the date to which it refers. The manuscript copy of the hronicle will be furnished by 11 a. m. daily; that of the Monthly Review not later han the 10th day of the month succeeding that for which it is prepared. All copy and roofs of the same will be sent to the officer in charge of the printing-room, and will e checked with the initials of the assistant responsible for their preparation.

RULES FOR THE GOVERNMENT OF THE INSTRUMENT-ROOMS IN THIS OFFICE.

1. No person unconnected with the office will be admitted to the room before 12 m., r after 3 p. m., unless accompanied by a commissioned officer.

2. The enlisted men on duty in the room will report promptly at 9 o'clock a. m., and vill not absent themselves during office-hours without the authority of the officer in harge.

3. Enlisted men and messengers will not visit the room except on duty, and, in so isiting, will refer their business to the officer in charge.

4. The volunteering of information to parties not connected with the signal-service s strictly prohibited.

5. Official communications from enlisted men on duty in this room will be transmitted nd forwarded through the regular military channel.

6. In the absence of the officer in charge, the ranking non-commissioned officer on luty in the room will be held responsible for the proper performance of the duties of he attendants, and will require a strict compliance with these rules and regulations.

7. Instruments will not be taken from the room without authority from the officer in harge, or the non-commissioned officer in charge during his absence.

8. No instrument will be issued or allowed to be taken from the buildings connected vith the office without a written order signed by the Chief Signal-Officer, or one of he military assistants in this office, which order shall be at once filed in the property livision by the officer or non-commissioned officer rceiving it.

9. The sergeant in charge of the comparison and examination of instruments will ave the immediate care of all meteorological instruments supplied to stations, and vill issue and carefully pack them for transportation to stations, subject to the order f the officer in charge of the room. He will unpack and examine all instruments re- eived, and report to the officer in charge their number and condition. He will have harge of the comparison of barometers with the standard, and determine the correc- ion to be applied for instrumental error; of thermometers, hygrometers, maximum hermometers, minimum thermometers, and all other instruments with the several tandards. He will have charge of the instrument records, which are as follows:

First. Record of barometer and thermometer cases and boxes issued to observers.

Second. Record of instruments received.

Third. Record of instruments issued and returned from stations.

Fourth. Record of the comparison of instruments—Green's standard barometer, Green's standard maximum and minimum thermometers, and Wild's maximum and minimum thermometers, and Glaisher's standard hygrometers and Edson's hygrodeik.

Fifth. Record of all facts relating to all instruments, and general note-book.

These records will be posted at least once a week. He will keep on his desk a "guide or examining, comparing, testing, and packing meteorological instruments."

10. The sergeant in charge of self-recording instruments and records will have the ntire and exclusive management and care, subject to the approval of the officer in harge of the room, of all self-recording instruments, batteries, wires, and instrument ecords in the room. For general instructions as to the manner of, and time for, chang- ng records, this sergeant will familiarize himself with "Instructions for the management of self-recording meteorological instruments at the office of the Chief Signal-Officer of the Army," and keep a copy of the same on his desk for reference.

11. The records, when taken off the instruments, will be disposed of as follows: Those from Hough's printing-barometer and Beck's aneroid barometer will have the barometric curve traced in ink, and will then be properly filed; those from Hough's meteorograph and barograph will be traced in pencil and filed; those from Beckley's and Draper's rain-gauges will be traced in ink, when rain has fallen, and then filed. The records of the Gibbon self-registering attachment to the anemometer will also be carefully examined, and all letters or lines traced carefully and plainly in ink when the original is faint or uncertain. The above files will be kept in separate drawers provided for their reception in the blank-case marked "K."

12. Extra parts of instruments, such as spindles, screws, &c., will be kept constantly on hand, and their accuracy tested by fitting them to the instruments in use or under examination. The officer in charge will make a special inspection and written report every ten days of the condition of each instrument in all its parts that are liable to wear or friction. In this report the parts of each instrument will be named, with the condition in which each part was found.

13. The watch-sergeant will report for duty at 8 o'clock a. m., and, in company with the sergeant then on duty, will inspect the instruments, &c., relieve that sergeant from duty, and take charge of the instrument-rooms, and will remain on duty until 4 o'clock p. m. He will observe that the rooms are properly swept, the instruments properly dusted, and the fires attended to. He will make an inspection of the instruments with the sergeant coming on duty at 4 p. m., and will turn over to him the keys of the room and of the fire-alarm.

14. The sergeant of the watch will not leave the building until relieved by his successor, or by proper authority, and will, when relieved, turn over to his successor all keys, records, and instruments received during his tour of duty. Between the hours of 4 p.m. and 8 a.m. he will inspect the instrument-room at least once every hour, and, in case of emergency or special service, will call upon the nearest officer for assistance and instructions.

15. The photographer will be held responsible for the proper care of all photographic instruments and material, and will receive his instructions from the officer in charge of the instrument-room. He will also keep an accurate record of all photographs taken, giving the date and number of each negative, with a proof of the same.

16. The machinist, whose duty it is to keep in repair the meteorological instruments, will report for instructions at 9 a.m., daily, during the week, and on Monday of each week will thoroughly clean and oil the machinery of the different instruments

---

RULES FOR THE GUIDANCE OF INSPECTING OFFICERS OF THE SIGNAL SERVICE, UNITED STATES ARMY.

1. The outfit of an inspecting officer will consist of the following-named instruments, in addition to the necessary blanks, stationery, &c.:

One standard mercurial barometer;
One standard aneroid barometer;
One standard thermometer;
One standard compass.

2. Upon arriving at a station he will carefully compare all station instruments with his standards, making not less than thirty readings of each instrument, and keeping an accurate record of the observations of both his own and the station instruments and forwarding the same to the Chief Signal-Officer with his inspection report.

3. He will determine by the aid of his compass the accuracy with which the station wind-vane is placed in position upon the true meridian, and, if an error is found, will have it corrected before he leaves the station.

4. He will ascertain by actual measurement whether any change has been made in the elevation of the barometer, thermometer, or rain-gauge since the station was last inspected, and if such change has been made, will report the amount and date of the same.

5. In the event of any change having been made in the location of the office since the date of the last report, he will ascertain the exact elevation of the new office, and of the several instruments above the bench-mark of the station, as given in circular No. 2, issued from the office of the Chief Signal-Officer, under date of January 11, 1873, and is authorized to employ for this purpose, whenever necessary, the city engineer, or, in his absence, any other responsible person.

6. He will note carefully the condition of the office-room or rooms, and when they are found improperly kept or arranged, will see that the proper changes are made before he leaves the station.

7. He will examine in detail the office-books from the date of the last previous inspection, and if errors are found, will point them out and instruct the observer in charge how to correct them. In case of omission on the part of the observer in charge to keep all or part of any record, he will report the fact to the Chief Signal-Officer, with such recommendations as he thinks proper, accompanying the report with a written statement from the observer of the cause of said omission.

8. The condition of the several instruments will be thoroughly examined, and when any fault of location or want of cleanliness is discovered, will attend in person to its correction. The observer will be examined as to his knowledge of the instruments and their management in detail, and when found ignorant of any part will be properly instructed.

9. All map and bulletin frames will be personally inspected, and their condition noted from actual observation, and not from the observer's statement. The date of the several maps and bulletins posted in the frames at the time of inspection will be observed, and if the latest issue is not found therein the observer will be called to account for neglect of duty.

10. A full list will be forwarded with each report of all maps and bulletins issued at the station inspected, showing the name and local address of each person, firm, or institution receiving them.

11. The chairman of the meteorological committee or committees, where more than

e exists at a station, will be visited, and inquiry made as to the conduct of the observer and other men on duty at the station, and the manner in which they perform eir special duties. Suggestions will be invited that tend to increase the usefulness the service by a wider diffusion of the reports.

12. The amount and condition of the property for which the observer is responsible ill be noted in the report, and suitable disposition of unserviceable property recom- ended.

13. The observer in charge will be examined as to his knowledge of the various cir- lars issued from the central office, and when he does not appear to understand any e or part of one, proper instructions will be given him.

14. The inspector will explain to each observer the proper manner of furnishing ems of special interest in the reports to the local newspapers, impressing upon them all times, however, the fact that these items will not be furnished when the papers n be induced to print full reports.

15. The inspection report of each station must be made out and mailed before the in- ecting officer leaves the station.

16. The inspector will be present in person at all the observations made at the sta- on he is inspecting during some one day of his inspection, and will correct on the ot any errors into which the observer may have fallen.

17. He will examine the assistants on duty at the station as to their knowledge of eir practical duties, and also as to the progress made by them in the theoretical owledge of meteorology, and will report the result of such examination to the Chief gnal-Officer.

PAPER 9.

xhibiting the communications sent from and received at the office of the Chief Signal-Officer (exclusive of telegrams) from October 1, 1872, to September 30, 1873.

SENT.

IVISION OF TELEGRAMS AND REPORTS FOR THE BENEFIT OF COMMERCE AND AGRICULTURE.

o heads of departments and bureaus	94	
o observer-sergeants in reference to their duties	7,843	
reply to applications for stations and others similar	68	
o telegraph companies in reference to transmission of weather reports	280	
o boards of trade, chambers of commerce, agricultural societies, &c.,	5,309	
o foreign correspondents relating to this division	368	
eneral and special orders and circulars with reference to this division	5,780	
iscellaneous	1,592	
Total		21,334

SIGNAL-DIVISION.

o heads of departments and bureaus	142	
elating to duties and discipline at signal-service school of instruction and post of Fort Whipple, Va.	638	
elating to recruiting and enlistment	277	
nswers to applications for appointment in the signal-service, United States Army	367	
eneral and special orders and circulars with reference to this division	1,789	
iscellaneous	842	
Total		4,055

PROPERTY-DIVISION.

o heads of departments and bureaus	681	
o manufacturers and others in reference to instruments, equipments, &c	852	
o observer-sergeants and other enlisted men in reference to property and money accounts	8,161	
n reference to quarterly returns of officers	457	
iscellaneous	10,892	
Total		21,043
Aggregate		46,432

RECEIVED.

DIVISION OF TELEGRAMS AND REPORTS FOR THE BENEFIT OF COMMERCE AND AGR CULTURE.

From heads of departments and bureaus	62	
Applications for establishment of new stations	58	
From telegraph companies in reference to transmission of weather reports	208	
From observer-sergeants in reference to their duties	6,163	
From boards of trade, chambers of commerce, and agricultural societies	3,303	
From foreign correspondents relating to this division	118	
Special applications for suggestions for practical use of weather-maps, &c	268	
Reports relative to instruction of observer-sergeants and assistants	3,957	
Mailed reports of observer-sergeants on station	175,324	
Miscellaneous	2,024	
Total		191,48

SIGNAL-DIVISION.

From heads of departments and bureaus	237	
Relating to duties and discipline at signal-service school of instruction and post of Fort Whipple, Va	564	
Relating to instruction in signaling at Fort Whipple, Va., and in different military departments	276	
Relating to recruiting and enlistment	1,017	
Applications for appointment in the signal-service, United States Army	210

57. Anno XXV° della corrispondenza scientifica. Bulletino delle osservazioni ozonometriche meteorologiche, fatte in Roma da Caterina Scarpellini.

58. Meteorolgical observations, St. Xavier's College Observatory, Calcutta, for July to December, 1872.

59. Monthly records of results of observation in meteorology, terrestrial magnetism, &c., taken at the Melbourne Observatory during January, February, March, April, May, June, July, and August, 1872, under the superintendence of Robert L. J. Ellery.

60. Discussion of the meteorological and magnetical observations made and collected at the Flagstaff Observatory, Melbourne, and at various stations in the colony of Victoria, March, 1858, to February, 1859.

61. Results of the meteorological observations taken in the colony of Victoria, during the years 1859–'62, and of the nautical observations collected and discussed at the Flagstaff Observatory, Melbourne, during the years 1858–'62. By George Newmayer.

62. Results of the magnetical, nautical, and meteorological observations made and collected at the Flagstaff Observatory, Melbourne, and at various stations in the colony of Victoria, March, 1858, to February, 1859.

63. Sammlung von Hülfstafeln zur Berechnung barometrischer Höhenbestimmungen. Zusammengestellt von A. Moritz und H. Kiefer. Tiflis, 1870.

64. Osservazioni meteorologiche con speciali istruzioni intorno a quelle pluviometriche raccolte sotto la direzione del P. Francesco Denza, direttore dell' osservatori del R. Collegio Carlo Alberto in Moncalieri. Torino, 1873.

65. The Greek Philological Society in Constantinople, Tomoe E, 1870–71.

66. Nouvelle classification des nuages, par André Poey. Paris, 1873.

67. Zeitschrift der oesterreichischen Gesselschaft für Meteorologie. Redigirt von Dr. C. Jelinek und Dr. J. Hann. Band 7. Wien, 1872.

68. Meteorologische Beobachtungen angestellt auf der Leipziger Universitäts-Sternwarte im Jahre 1871. Von Prof. Dr. C. Bruhns.

69. Die physikalischen Einwirkungen des Waldes auf Luft und Boden und seine klimatologische und hygienische Bedeutung. Von Dr. Ernst Ebermayer. Aschaffenburg, 1873.

70. Graphische Darstellungen über den Gang der Boden- und Luft-Temperatur im Freien und im Walde. Extra-Beigabe zu Dr. E. Ebermayer. Aschaffenburg, 1873.

71. Ricerche fisico astronomiche intorno all' uranolito caduto nell agro Romano i 31 di Agosto 1872, del padre G. Stanislaus Ferrari.

72. Om Askvadren I sverige år 1871, af Hugo Hildebrand Hildebrandsson, Upsala Universitetets, årsskrift, 1873, Upsala, 1873. *With* Bulletin météorologique mensuel de l'Observatoire de l'Université d'Upsal. (Vol. 5, Dec., 1872, No. 1.)

73. Monthly record of observations in meteorology, &c., at Melbourne Observatory, November and December, 1872, and January, 1873. (Robt. L. J. Ellery.)

74. Monthly notices, Meteorological Society of Mauritius. (February 13, 1873.)

75. Stonyhurst College Observatory. Results of meteorological and magnetical observations, 1872.

76. Annales de la Societé d'émulation du département des Vosges. Tome 14e, 1er ahier. Paris, 1871.

77. Le stelle cadenti del 27 Novembre 1872, nota del P. Angelo Secchi. Roma, 1873.

78. Specola reale di Napoli. Osservazioni meteoriche dell' Ottobre, Novembre, Di- embre, 1872, fatte dall' astronomo Professore F. Brischi. (3 parts.)

79. Monthly record of meteorological observations taken at Melbourne Observ- tory, for February, 1873, under the superintendence of Robert Ellery.

80. Notes on the climate of Victoria, by same.

81. Det Kongelige Norske Videnskabers Selskabs Skrifter i det 19de Aarhundrede, de Binds, 1st Hefte, (med 6 Plancher.) Throndhjem, 1872.

82. Die Pflanzenwelt Norwegens. Ein Beitrag zur Natur- und Culturgeschichte Nord- uropas. Von Dr. F. C. Schübeler. (Allgemeiner Theil.) Christiania, 1873.

83. Norsk Meteorologisk Aarbog fur 1871, udgivet af det Meteorologiske Institut. hristiania, 1872.

84. Annalen des physikalischen Central-Observatoriums. Herausgegeben von H. ild. Jahrgang 1871. St. Petersburg, 1873.

85. Jahrbücher der k. k. Central-Anstalt für Meteorologie und Erdmagnetismus. Von arl Jelinek und Carl Fritch. Wien, 1873.

86. Mittheilungen aus dem Archiv des Voigtländischen alterthumsforschenden ereins. 41ster, 42ster und 43ster Jahresbericht.

87. The cyclone in the Bay of Bengal in June, 1872, by W. G. Wilson, officiating mete- rological reporter to the governor of Bengal.

88. Meteorolog-Bulletin des physikalischen Central-Observatoriums. St. Petersburg, 872–'73.

89. Bulletin international de l'Observatoire de Paris, 1872–'73.

90. Telegrafische Witterungs-Berichte. Von k. k. meteorologischen Central-Institut ohe-Warte bei Wien, 1873. F. Osnaghi.

* Observations began January 1, 1873. † Observations began January 19, 1873.
‡ Observations began April 1, 1873.

PAPER 14.

REPORT OF OBSERVATIONS MADE AT THE ISLAND OF SAINT PAUL, (BEHRING SEA,) BY OBSERVER C. P. FISH, SIGNAL-SERVICE, U. S. A., FROM JUNE 5, 1872, TO MAY 31, 1873.

ISLAND OF SAINT PAUL,
Behring Sea, April 15, 1873.

SIR: This final report that I have the honor to transmit is deemed expedient as a medium, not of exhaustive analysis or even of approximation to perfect results, but rather of conveying a general synopsis of the meteorological features incident to this area.

ANALOGOUS FEATURES OF TWO AREAS.

Naturally resembling that of the North Atlantic Ocean, the climate of Behring Sea presents but few of those more wonderful electric and other phenomena of interior climes; but, as fields for practical research, I can conceive of none more valuable than Iceland of the Atlantic and Saint Paul Island of the North Pacific. Similarly situated in relation to ocean currents, these areas can be readily pictured in the imagination as aerial maelstroms, where, throughout the year, the elements are scarcely ever at rest and storm succeeds storm with violent rapidity and complex change.

PHENOMENA OF UPPER CURRENTS.

The arrangement of observations on the upper currents, which I have attempted, is by no means perfect. The entries in the nephelogical and phenomenal reports are ther in the form of such daily memoranda as apply to the movements of storms and e general phases attending. Voluminous as these reports already appear, a truly rfect entry would involve more rigid system, so constant is the cloudiness and rious the elemental changes, and, thereby, so comprehensive the phenomena daily esented in this climate, that a record of all might discourage the most cursory view. Nevertheless, after a sort of philosophical assumption that all the obscure ws of nature, whether organic or intellectual, are to be developed during future ages, t for, but by, the mind of man, it occurs that, to establish from theories the laws verning the progression and movements of storms, research into the most minute d interior phases thereof should be prosecuted with unceasing vigor.

NEPHELOGICAL OBSERVATION.

Observations upon the clouds alone as indicative of currents and certain barometric other conditions can be so extended that, concerning my own memoranda, I would xcuse their tedious and perhaps monotonous length through evidence of their value as mply records for reference in the investigation of any one particular disturbance.

INTERIOR PHENOMENA.

Another object, independent of immediate practical value, appears in their continu- nce. Recognizing the necessity, in any system of observations, of a correct method the beginning, and awaiting instructions and advice wherein I may have gone stray, I had deemed these minor phenomena, interesting as they are to myself, of con- derable general value, also, as disciplining the attention and leading the perceptions ore readily from effect to cause.

OBSCURITY OF CERTAIN RELATIONS.

Although a more lucid review might be anticipated from a station so distant and isconnected, any discussion of the laws governing these storms, and, particularly, the ectrical condition of these centers, must be necessarily premature, if not impracti- ble.

ATMOSPHERIC PRESSURE.

The area of low pressure prevailing during winter over Behring Sea is certainly ery extended, as evidenced by former observations at Sitka and those records from e mouth of the Anadyr which I have transcribed, and transmit for reference. This markable depression presents curves and variations which, although not very ab- pt, are of extreme interest in connection with the atmospheric changes.

VARIATIONS OF PRESSURE.

The difference between the pressure of any two successive months, as December, 872, and January, 1873, is often extreme and a true index of other corresponding con- itions both thermal and hygrometric.

LOW WINTER PRESSURE.

It will be observed that the low average of the winter months is produced by ex- reme minima attending storms; in other words, the normal pressure is high. I do ot here allude to those considerable periods in which the barometer has maintained a eight above 30.40 or 30.50, but rather to those serene intervals in which the pressure, ntirely uninfluenced by any adjacent depressions, remains, for days together, above 0.00, as in the summer months.

ATMOSPHERIC WAVES.

Otherwise than from the great daily and monthly variations, the barometric move- ents appear to resemble those of temperate climes. The great depressions move for- ard at rates varying according to that of the cirrus cloud, as indicated in nephelogi- al report, and the high intervening ranges are traced according to the lesser oscilla- ions of the mercury that so frequently occur.

INTERIOR STORMS AND EXTENDED AREAS OF DEPRESSION.

During each of two months, December and February, depressions occurred which oubtless extended over the entire area of ocean north of the fiftieth parallel. These ppeared for many days stationary, and reference to the journal indicates a series of inor depressions, to which, considering their characteristics and attending phenom- na, I have applied the name and importance of subordinate "eddies," as will be noted nder the head of storms.

THERMAL CONDITIONS.

The range of temperature over the area of which Saint Paul Island is represent- tive, is most intimately related, as might be anticipated, to the extreme high degree of humidity which prevails even through the winter months. In this element of heat we notice, particularly, the influence of ocean-currents, which appears similar to that causing the isothermal deviations of the North Atlantic.

MEAN WINTER TEMPERATURE.

The past winter is said to have been "seasonable," but a series of former thermometric records has fallen under notice which indicates that during this period a higher temperature sometimes prevails, and thus, perhaps, a lower pressure. I am confident that a series of years would throw the isothermal of 20° considerably south of this island.

RANGE OF TEMPERATURE.

The range of temperature, both daily and monthly, is subject to greater variations than in the summer season. During a period of two or three months the sea northward is completely ice-bound, whence it might be inferred that the depressions occurring on the westerly curves of storms are quite as abrupt and extreme as in the continental interior. Results do not justify this conclusion, as the thermometer rarely attains a minimum of — 10°, and it is quite evident that, during the period referred to, the island still lies within the influence of the warm currents southward, the ice-boundaries extending but a short distance in that direction.

ABRUPT VARIATIONS.

The more rapid variation occurs on the easterly quadrants of those storms from southwest, in which the indrawn southeast current causes the temperature to rise quickly to near or even above 32°.

GENERAL UNIFORMITY OF TEMPERATURE.

With exception of the less abrupt depression on the westerly quadrants produced by the northerly surface currents, the temperature remains otherwise remarkably equable, and, during even the days most free from cloud, the thermometer, if, at daylight, near or below zero, continues near that degree until the sun attains the meridian, even although it is near the vernal equinox, and the wind comparatively light.

AN ISOTHERMAL OF ALASKA.

The winter isothermal of Sitka evidently intersects this meridian about one hundred miles south of the Aleutian Isles.

THERMAL MAXIMA AND MINIMA.

The winter maximum of temperature is said to very rarely attain 40°. The minimum has never been known to extend below —14°.

HIGH TEMPERATURE OF NOVEMBER AND DECEMBER.

November and December are generally noted for high temperature, and the absence of ice during those months is naturally suggested as among the known causes in advancing, as in the interior, the winter minimum to a period one or two months beyond the solstice.

PERIOD OF GREATEST THERMAL DEPRESSION.

Casual observers have attempted to indicate the month or time of greatest cold. Without disputing statements conflicting in themselves, it is evident that this can be established only by extended observations. During the past winter March, with a mean temperature of 12°, was the coldest month; but an examination of other prevailing conditions points to this instance as possibly exceptional.

TEMPERATURE OF SURFACE CURRENTS.

I have entered in phenomenal record crude observations on the general course of temperature corresponding with surface wind. These I would henceforth discontinue as an unnecessary addition to Form 4.

TEMPERATURE OF SOUTHWEST CURRENT.

The only currents worthy of note by reason of temperature are those from southwest and east-northeast. The southwest current moves from the direction of the warm Kuro Siro; nevertheless, the southeast wind of the other southerly quadrant which frequently attends rain, no more quickly veers to southwest than does the temperature materially decrease and the rain turn to snow. The southwest wind, even when independent of its rotary relations to a storm's center, and, when once or twice observed to be permanent from that direction, is also of several degrees lower temperature than the average of the southeast current.

TEMPERATURE OF EAST-NORTHEAST CURRENT.

The temperature of the east-northeast wind exhibits a rather higher temperature, I think, than that of the current from due east; but this is a subject for further observation.

RELATIVE HUMIDITY.

The hygrometric conditions prevailing during the winter are but little at variance with those of the summer. So frequently, indeed, have degrees of saturation to be recorded, than when the difference is less than one degree, I have entered the humidity as deduced from a fractional part thereof.

HUMIDITY OF VARIOUS SURFACE-CURRENTS.

The north wind is laden with the least moisture, which is still relatively great. The following is the order in which the winds vary with reference to an *increase* of moisture: North, northeast, northwest, west, southwest, south, east, and southeast. This does not embrace, however, the east-northeast wind, which almost invariably advances a degree of saturation.

PHENOMENAL INCREASE OF HUMIDITY.

For several weeks in the fall months I noticed, during irregular precipitation, an invariable increase in humidity and the violence of the showers whenever the wind veered at all westward from due north. A column therefor was accordingly entered in one of the reports, but, after the succession of the winter months the phenomena was no longer repeated. This column I have continued, however, that it may be noted, in the ensuing season, whether such relations were purely co-incidental, or owing to sea-currents subsequently closed by ice.

ARIDITY OF NORTHEAST CURRENT—ITS RESEMBLANCE TO THAT OF WESTERN EUROPE.

The aridity of the northeast wind remains to be noticed for its remarkable correspondence to the northwest wind of the States, and its close analogy to the northeast current of western Europe. Whenever the center of a storm moves south of the island, that current is thrown into action, and its cold aridity speedily condenses the upper clouds, changes the storm "scud" stratus to characteristic cumuli, and in every manner denotes the presence of the westerly quadrants.

ORDINARY CHARACTERISTICS OF SURFACE-CURRENTS.

Concerning the winter surface-currents in general, in nautical idiom, "it is always blowing a gale." During the season of the year under consideration, the intervals between the storms are so brief, and the north winds of retreating storms so persistent, that the expression conveys almost literal truth. I have deemed it expedient to refer, in the following general manner, to the characteristics of each of these surface-currents, in order to aid in a comprehension of the ordinary winter weather of the island.

NORTH WIND.

The north wind naturally prevails on the westerly quadrants of storms, but settles more frequently in that quarter when the center passes south of the island. When the center passes north or northwest, and the wind veers by way of southeast and south, conditions, thus far, have appeared so complex and other storms so quickly succeed that the current seldom veers around as far as north, or even northwest. The north wind is characteristic in its low temperature and the irregular showers of receding storms from west-northwest. In this climate it is almost invariably attended by a cumulus which extends around the horizon, or, more usually, appears as a full, gray, monotonous stratum. This wind frequently varies or oscillates between north-northwest and north-northeast, without appearance of upper cloud or other disturbing conditions. Its velocity is usually about twenty-five miles per hour, but frequently, for days together, it moves at the rate of thirty to forty-five miles.

NORTHEAST WIND.

The northeast wind resembles that from north, but, after its speedy condensation of upper clouds, it is seldom attended by profuse showers. When persistent it is not vigorous.

EAST WIND.

The *due* east wind seldom prevails. The currents of aspiration caused by approaching storms usually spring from east-northeast, or some point to the south of east-southeast.

EAST-NORTHEAST WIND.

The east-northeast wind attends nearly all storms from the west-northwest, and demands attention in their connection. Its average velocity is about thirty-eight miles an hour, but on "occasions of state," as during the storm of February 8, it asserts terrific strength and confirms its power by hurricane violence. As in January, it sometimes continues for many days, forming, with its characteristic phenomena, the extreme outer fringe of quadrants of storms prevailing in succession on far-distant southerly parallels.

SOUTHEAST WIND.

The southeast wind, indrawn towards approaching storms, is frequent during the months of November and December, and during some winters evidently throughout the season. This current, so prevalent at Sitka, is also frequently recorded in the Anadys Transcript, sometimes transferring the mercury quickly from — 30° to + 30°. It seldom moves at a less velocity than twenty-five miles per hour, more generally at thirty-five; and frequently, for a few hours, from fifty to seventy miles. Its average duration is not so great as that of the east-northeast wind, and in the majority of storms it speedily veers to southwest.

SOUTH WIND.

The south wind resembles the southeast, but is comparatively infrequent, and either prevails from that direction temporarily, during a gradual veering, or, if settled, unusually has several degrees of so-called "westing," partaking of the nature of the southwest wind. Its velocity is moderate.

SOUTHWEST WIND.

The southwest wind is the great surface-current pushing toward the storm-centers that pass north of the island. It is usually the extreme limit to which the wind veers when other storms are about to succeed, and, with regard to its phenomena, is worthy of strict attention. Its vigor is from thirty to thirty-five miles, although at times as great as sixty-five or seventy miles per hour.

WEST AND NORTHWEST WINDS.

The west and northwest currents have been, thus far, the least frequent and vigorous of all. General phenomena indicate these characteristics as normal, but on this point the evidence of those residing on the island is conflicting. The prevalence of high westerly winds would necessitate atmospheric conditions, which are not yet, to myself, readily imaginable.

PRECIPITATION.

Observations on the character and amount of precipitation in this area are attended by interesting results. It will be at once noted how entirely disproportionate is the amount compared to the relative frequency and ominous character of cloudiness. The most profuse seldom affords a measure exceeding forty hundredths, (.40,) and yet it frequently occurs that every day of an entire month is attended by light precipitation of some form, and even if the entry of "rainy days" be restricted to those in which at least .01 falls, the number is surprising. A large amount of this precipitation is furnished by the front quadrants of general storms, although long continued showers of westerly quadrants add a remarkable share, especially during the months of January, February, and March; the hail and snow of cumulo-stratus attending the storm-center is by no means inconsiderable.

PRECIPITATION, IRREGULAR AND CONTINUOUS.

In phenomenal reports I have classified the precipitation as *irregular* or *continuous*, and thus far a large portion of the latter has fallen during the night.

FORM OF RECORD.

By reason of the light quantities, resulting from showers and consequent error from evaporation, I have entered the former thrice daily.

FORM OF PRECIPITATION.

By far the greater amount, during the winter months, is in the form of snow, drifting immediately into the sea. In continuous snow, however, the southeast wind seldom fails to so increase the temperature that rain can and does fall at any time, during the season.

SIZE OF DROPS, FLAKES, AND HAIL-STONES.

The rain-drops are of comparatively small size, and never descend in torrents as on the mainland coast or interior.

The size of snow-flakes varies as elsewhere; the fine frost-snow of the arctic regions is occasionally recorded during extreme thermal depressions, but is seldom of sufficient amount to reflect even imperfect parhelia, although sometimes descending from a cloudless sky. The hail is of the white opaque variety, termed sleet, and varies in size according to the strength of conditions hereafter referred to; the study of its texture is not to be disregarded.

SNOW-MEASUREMENTS DURING TEMPESTS.

In the journal of February 8 I have referred to the difficulty of snow-measurement in stormy climes, the frequent inutility of the rain-gauge, however admirably constructed, and the extreme care and judgment requisite for accuracy. Partial *estimate* becomes absolutely necessary during certain storms, but, in order to secure more proximate results than is usual under such conditions, I adhere to a series of *considerations* entered on the date referred to.

STORMS OF BEHRING SEA.

The subject of storms presents a field of amazing latitude, and the numerous results of records, even with the exclusion of discussion and *cherished theories*, can scarcely be all embraced in a review of this character.

Somewhere in course of reading I have noticed the assertion that the signal-service comprised, among other observers, a large proportion of *unsuccessful* merchants. Discarding, simply by allusion thereto, the unintentional animadversions, I cannot conceive how those unfortunate, *through inability*, in the maze of commercial venture, could ever anticipate success in analysis of the almost interminable series of phenomena attending atmospheric storms, and thence weave theories perfect and firm.

FREEDOM OF WINTER FROM FOG AND CONSEQUENT FAVORABLE VIEW OF UPPER PHENOMENA.

So comprehensive are the changes and attendant phenomena so openly presented to view during the winter season, are the numerous and intricate cloud-currents over Behring Sea, that a failure to obtain the secret of the causes operating to produce a storm-progressive movement alone is indicative of the innate strength of meteorological science, and declares that the attack of the very front necessitates not only the acumen of commercial talent, but all the practical tact that applies to law or mutual philosophy.

TWO CLASSES OF GENERAL STORMS.

The ordinary records point very conclusively, however, to certain general results. Of the storms prevailing during winter there are two sorts, both cyclonic; one whose general course is from west-northwest, and the other from any point between west-southwest and south.

WEST-NORTHWEST CLASS OF STORMS.

The storms from west-northwest naturally appear to proceed from near the Asiatic coast. They occur at any season of the year, but more frequently in the later months of winter, displacing, as it were, the succession of those from southwest. Their origin may be, at least, as far westward as the coast-line, inasmuch as they are of fully developed and sometimes excessive vigor on arrival at the island.

DIRECTION OF ROTARY CURRENTS—DURATION.

Although their course is occasionally from many degrees north of west-northwest, the indrawn rotary current is generally from east-northeast. When the center passes north the wind may rise from east-southeast; seldom or never from due east. The duration of this storm is from one to three days.

PREMONITORY INDICATIONS.

The manner of initiation is peculiar to its class. Two or more days of comparative inaction elapse, during which there is seldom visible, at night, any appearance of auroral glow; but, on the night preceding the storm, that phenomenon is frequently observed as recorded in journal. During the night or following day, humidity increases, the barometer falls, and, after the commencement of the rotary current, the temperature increases, though not to so great a degree as in the southwest class of storms.

CIRRUS ADVANCE.—CIRRUS OF ANOMALOUS ALTITUDE.

The cirrus advance is, through practice, easily recognized among any other clouds and frequently appears many hours previous to the barometric fall. It is sometimes accompanied by cirrus compounds and overspreads the heavens very gradually. When cirro-stratus or cirro-cumulus alone appear moving, as they never do in the commencement of southwest storms, along the path ofdisturbance, those clouds, during and after extension, are sometimes obscured by a peculiar form of cirrus which must be of singularly low altitude.

PRECIPITATION ATTENDING THE EAST-NORTHEAST CURRENT.

The wind increases in this storm gradually and regularly, veering slowly at the center to north by northeast, or by south. The precipitation is remarkable for the small size and piercing character of flakes which, when fallen, have to the touch a consistence of finely ground meal or flour. It is surprising that when the wind happens to veer toward the southeast, these flakes enlarge and assume a texture as normal as when it veers the other way.

MARKED PHENOMENA OF THE EAST-NORTHEAST CURRENT.

There is another similar phenomenon incident to this storm, or rather to the east-northeast current, quite worthy of note. At a temperature as low as 22° the snow frequently turns to rain; now, we will suppose the temperature to remain uniform; if the wind veers by way of northeast the rain turns to snow, which is not remarkable, but it is certainly singular that the rain also changes to snow if the wind veers to southeast, or even approaches within 5° of east. I have even noticed, under the latter conditions, the change to snow when the temperature *increased* to 32°.

CURRENTS, AERIAL AND OCEANIC.

These phenomena seem to indicate that, eastward of this island, the warm currents of the sea are thrown over into Bristol Bay, producing there an area of increased warmth and humidity. This suspicion is supported by other phenomena that attend this wonderful storm-current. It is uncertain, thus far, whether the oceanic currents are deflected by ice toward the area referred to. These east-northeast winds occurred at a very early period during the fall. Summer observations will assist in determination.

CHARACTERISTICS OF THE EAST-NORTHEAST CURRENT.

During the prevalence of this wind fog sometimes appears from east-northeast, and whenever cumuli moving from east or northeast assume a new direction from between those points, their texture is immediately changed to the scud stratus, if the wind is violent, to the uniform fog stratus if moderate. This stratus has but little elevation, and, on one occasion, (temperature 24° and no upper clouds,) I noticed fine rain when it lay at an altitude of less than 600 feet, and when its temperature must have been 8° above that at the surface of the earth.

"FROZEN FOG."

Moreover, with this wind, a frozen precipitation sometimes appears, which the people of the island call "frozen fog."

LIMITS OF THE SINGULAR EAST-NORTHEAST CURRENT.

Such are the phenomena incident, not strictly speaking, to the west-northwest storm, but to its surface-current, and they are worthy of continued attention. They only accompany that current when the latter is from between east 8° north and northeast 10° east. The residents and natives call the storm itself a northeaster. The northeast wind is of a widely different character from the east-northeast.

MOVEMENTS OF CIRRUS IN WEST-NORTHWEST STORMS.

Although, during the passage and disappearance of this storm, cirro-stratus and cirro-cumulus conform to the new surface-currents, the cirrus-cloud itself usually retains its original direction, presenting but few of the changes and dispositions which it exhibits in storms from southwest.

FINAL CHARACTERISTICS OF THE STORM.

Storms from west-northwest do not closely succeed each other, and their westerly quadrants constitute the most lengthy periods of severity. Finally, differing widely from those of the southwest class, their precipitation is frequently light on account of the fineness of the rain or snow.

STORMS OF THE SOUTHWEST CLASS—EVIDENT ORIGIN FROM CYCLONES OF CHINA SEAS.

Presented now for consideration, the southwest class of storms includes all those violent commotions whose origin is in the vast extent of ocean lying in a direction from west-southwest to south. These are, above all others, the storms which impart to this sea its tempestuous clime, and whose midnight fury often hurls, with almost volcanic strength, the mountainous waves of ocean against the island's rocks and cliffs. Rising from the direction of the warm Kuro Siro, or Pacific Gulf Stream, they move along its course, assuming their greatest frequency in November, and a review of their general phenomena cannot but suggest their real origin to be from those violent cyclones that curve around the China Seas.

PREMONITORY INDICATIONS.

Under a great variety of conditions do these storms appear before the island. At times, a dry, cold-appearing cumulus-stratum from north is suddenly dispersed through extension of the cirrus from southwest, constituting the storm-advance. Sometimes, though not frequently, a storm from west-northwest appears to converge on one from southwest, in which the latter asserts its superior strength, and mingles with the former or breaks it up. More frequently, however, the first indication of its approach is a cirrus-trace along the horizon. This advance is seldom accompanied by cirrus compounds *from its own direction*, as in the storm from west-northwest, but the true current of cirrus itself extends with marked rapidity and ominous aspect.

PHENOMENA OF SOUTHWEST-STORMS.

The barometric fall is proportioned to this rapidity of approach, and the attending gale from southeast attains its maximum velocity, frequently, but a few hours after the initiatory indications. Storms of this class are of comparatively brief duration.

DECEPTIVE SOUTHEAST CIRRUS-CURRENTS.

It will be noticed, in the earliest dates of the journal, that I was led into the error of supposing many of these storms to progress from the southeast. This resulted from observing, during the progress of the storm, its cirrus-stratum, or traces thereof, moving from a southeast direction, when, in reality, this new movement of the cloud was caused by its coming within exposure to the surface-current.

ORIGIN OF ANOMALOUS CLOUD-CURRENTS AND FORMATION OF CIRRUS COMPOUNDS—FREQUENT CONFORMATION OF UPPER CLOUD TO SURFACE-CURRENT.

The observations of November 18, in journal, detail at full length the manner of these singular changes and also the origin of cirro-stratus and cirro-cumulus. It is especially worthy of note that after the advance quadrants of both classes of storms have moved beyond the island and the intricate upper currents again appear, the latter frequently evince this remarkable disposition to assume the direction of the surface-wind, and the cirro-cumulus of the west-northwest storms is almost invariably thus affected. In the storms under consideration, when the center approaches, and even after the wind has veered to southwest, the traces of cirrus retain a direction from east or southeast during the period they remain in view, which is usually brief.

CIRRI OF GREAT ALTITUDE.

At this step in the storm's progress, however, on one or two occasions, light traces of cirri have been observed, of great altitude and moving along the true path of disturbance.

STORM-CENTERS OF THE NORTH PACIFIC.

But these phenomena introduce the observer to an area of the storm more calculated to arouse wonder and speculation than any other possible combination of atmospheric conditions that prevail over Behring Sea.

The elements having exhausted their fury of the easterly quadrants, the wind quickly veers to southwest, dispersing the stratus "scud;" the fragmentary traces of retreating cirrus undergo all that remarkable transformation and disposition referred to in November's journal, and then, along the southwestern horizon, glimmers the sharp well-defined boundary of the cirro-stratus whence, beyond, lies a circular area which is the wondrous sun-lit storm-centre of the North Pacific, the investigation of whose phenomena is worthy of years and wherein are concentrated all the mighty forces of atmospheric action.

PHENOMENA OF THE STORM-CENTER—SPLENDOR OF THE ELECTRIFIED CUMULO-STRATUS ATTENDING THE STORM-CENTER.

The barometer is now at its minimum, and that singular element called *haze* assumes a peculiar appearance and increases from one or two, to seven, eight, or even ten in the *scale of density*, extending, however, but little distance above the earth. The sun having appeared, the island glows with a tinge resembling that of Indian summer, and naught remains, for a few moments, but the mercury of the barometer to indicate, to the casual observer, the focus of a widely-extended cyclonic storm. And now, wide-spread throughout the heavens and jutting above the horizon in all that majesty that nature alone can lend, frown the dense and apparently electified forms of the cumulo-stratus. Nowhere, from the Atlantic to the Rio Grande, or from Lake Superior on the north to the Bay of Mobile on the south, where in summer these imposing forms of vapor mass so grandly around the horizon, assuming a characteristic density, have I witnessed aught to compare, either in beauty or density, with those stupendous summits of the cumulo-stratus which fill the centers of these November and December storms.

CENTER WELL-DEFINED.

Confined within the limits of furious storm around, no imagination can render justice to their grandeur. Piled summit over summit they threaten every hour, winter though it is, terrific thunder-showers or visible electric bolts to appal the sense. But no *violent* storm issues from the vaporous battlements and lurid depths, no visible electric flash ever darts from out these apparent "thunder-clouds" that seem to have wandered from some tropical clime. The commanding forms move silently along the path of progression, monuments, as it were, of the mighty force that imparted to them their rocky density.

HAIL OF THE CENTRAL CUMULO-STRATUS.

At intervals, these cumulo-stratus precipitate a piercing hail, the intensity and size of which vary rather according to the strength of the general storm and the apparent symmetry of the storm-center, than the density of the immediate cloud.

"CLUSTER" RESOLUTION OF THE CUMULO-STRATUS.

It is well known that, in the interior, the electrified cumulus or cumulo-stratus is attended by a peculiar resolution, sometimes uniform in appearance and resembling nimbus or dense cirrus. A similar cloud transformation occurs in or near these storm-centers, to which I have applied, for distinction, the name of "cluster" resolution, as the formation not unfrequently resembles a cluster of fruit.

ASCENDING CURRENTS OF THE STORM-CENTER.

This peculiar form, ascending and resulting from cumulo-stratus, frequently ascends farther and becomes a cirrus, exhibiting phenomena as described, for instance, in journal of December 16, 1872.

CIRRUS AND ITS DISPOSITION—ASCENDING CURRENTS.

Many truths, otherwise established, are confirmed by the cloudiness which immediately encircles the storm-center. As an instance, peculiar movements in and upon the center of cirrus and its compounds, together with their sudden dissipation therein, prove the spiral movement of the indrawn currents. Again, briefly stated, ascending aerial currents of the center are indicated by the rise of cumulo-stratus into "cluster" resolution and, subsequently, into cirrus.

PECULIAR TRANSLATION OF CIRRUS.

Observations have revealed the singular fact that, when the center appears, the upper clouds bounding it on the easterly quadrants have a frequent movement from east, *which is only apparent*, for, in truth, a mysterious translation continues *toward* the east, or rather northeast, so that where a casual observer might anticipate another total obscuration of the heavens from eastward, he discovers, to his surprise, the retrocession of all these deceptive cloud-currents beyond the eastern horizon. All traces of cirri which have this apparent movement into the centre from east are dissipated as in a furnace.

OBSCURITY OF PROGRESSIVE ACTION.

The unsolved question frequently recurs, what invisible force propels forward this vast concentration of elements whose upper cloud-currents indicate in the commencement of the storm the path of disturbance, but, when bounding the center or seen in the western quadrants, furnish no longer any tangible clue to the direction of this progressive movement?

CURRENT OF GREAT ALTITUDE FROM WEST-NORTHWEST.

In the journal of November I have alluded to the possibility of an extreme upper west-northwest current which, as constant and generally unattended by cloud, has some connection with these storms from southwest. I was led into what was perhaps an error by observing in the first of the series, far above the storm, cirrus from southwest traces of that cloud from west-northwest. Unable to determine the relations of a current of at least five miles altitude, I abandoned, for the present, a fruitless consideration.

WESTERLY QUADRANTS OF SOUTHWEST STORMS—SOUTHWEST SURFACE-CURRENT.

Several centers of storms fortunately passed over or near the island, occupying in translation from eight to forty-eight hours. The westerly quadrants arrive with a renewal, in most instances, of symmetrical storms of precipitation and a tendency of the wind to veer more to the west and naturally to the northwest or north. But the succession of these storms is usually so rapid and sometimes so complex that the surface-current generally remains oscillating between west-southwest and south-southwest. Its action has been found highly deserving of notice, especially in connection with other phenomena, as indicating the character of approaching changes.

EXTENDED AREAS OF BAROMETRIC DEPRESSION.

Reference to the widely extended and extreme depressions now becomes necessary in connection with this southwest current of the westerly, or rather southwesterly, quadrants. Two of these, as stated in a former paragraph, have occurred during the winter and have proved so persistent that they can, by a certain composition of science, be designated as *chronic* in contradistinction to those in which the low pressure is of little duration.

INTERRUPTION OF SURFACE-CURRENT BY CERTAIN "EDDIES" OR SUBORDINATE STORMS.

These extended depressions are initiated by a storm of ordinary violence, and the wind veers regularly from southeast to southwest. The barometer falls perhaps to 29.30, but, instead of rising, it continues low and the veering wind "halts" on attaining southwest, veering no farther. Then, on several successive days follows a *series* of storms equally severe, perhaps, with the initiatory one; but, during each of these, the mercury falls a few tenths (say to 28.80) from the *established* low pressure of 29.30, which latter height is regained in the intervals between the storms. The latter bear every characteristic of subordinate "eddies" in a *general* depression. The spaces between these are ordinarily occupied by the dense cumulo-stratus, which, however, is not so well defined as in a single symmetrical storm.

ROTATORY CURRENT OF GENERAL DEPRESSION.

What supports this affirmation of *interior eddies* is that, after each one, the wind having, previous to its appearance, been naturally *drawn back* to the southeast, advances, *after veering*, farther and farther toward due west, so that when the last *interior* storm has disappeared its direction is fully west, if not west-northwest, just as if the great rotatory current of the general depression had been gradually veering during all these days from southwest to west-northwest or north.

STORM-WAVES.

It is the occasional violence of wind attending the westerly quadrants of these storms from southwest that produces the light storm-waves referred to in journal.

INFERIOR BUT EVIDENTLY DISTINCT CLASS OF STORMS.

There is one other inferior sort of storm from southwest that appears to be independent of the general class of southwest disturbances, as occurred during the latter days of February. These sometimes precipitate considerable, but are light and unattended by the phenomena of other storms, or even a change of wind.

NEPHELOGICAL PHENOMENA—FREQUENCY OF CLOUDS—RECORDS OF REFERENCE.

Close attention has been devoted to the subject of clouds. Any possible connection between a study of their texture and the practical concerns of life is, doubtless, to the world at large, a matter of merriment. Whether or not, for assistance in the operation of more practical laws, the very texture of clouds varies and consequent research thereinto is at present requisite, it is beyond a doubt that, owing to their great relative frequency over Behring Sea, they are faithful indicators of the upper aerial currents, and I have therefore ventured to classify, and enter for reference, their phenomenal indications as far as they can be made to bend toward the solution of questions that may yet arise.

CAPTION OF REPORT.

For the caption of this report, which includes only observations on the clouds, I have selected the word "νεφέλη," and, under the impression of having seen the derivative, *nephelogical,* I deemed it admissible.

CONCERNING RECOGNITION OF ATMOSPHERIC CONDITIONS BY MEANS OF CLOUD-TEXTURE.

It has been impracticable, as in the instance of the cirro-cumulus, to enter rigidly in Form 4. Without attempting, at present, ulterior deductions from the brief records thus far at hand, I would note the important truth, doubtless already known, but developed particularly in this area, that similar conditions in the progress of, or intervals between, all storms are characterized by corresponding aspects of cloudiness.

CORRESPONDING NECESSITY OF EXTENDED CLASSIFICATION—CHARACTERISTIC TRA FORMATIONS IN CLOUDS.

This undeniable premise involves a most extended classification, which, witho nomenclature, I have, during the winter, mentally performed. Thus, (excluding ni bus,) the remaining six cloud formations, notwithstanding their *apparently* innumeral and kaleidoscopic variations, present, each one, under appropriate barometric and oth conditions, either present or approaching, such marked and distinctive aspects a texture as to be readily recognizable on future occasions. For instance, cumulus fr southeast differs entirely from that moving from north, and cumulus from north is n of the appearance of that from northwest or west. Cumulus as a complete strat with no upper cloudiness is of an aspect widely different from that of cumulus wh cirrus or cirro-stratus lies above. The other clouds are susceptible of a similar class cation; and, in truth, there are no less than forty different strata which I recognize conforming to or heralding corresponding atmospheric conditions.

LACK OF NOMENCLATURE.

To this subdivision there is an evident limit, and a general nomenclature of various sorts would materially condense the cloud-records of the accompanying journ

PRINCIPAL VARIETIES OF CIRRUS CLOUDS.

The cirrus cloud of Behring Sea is particularly remarkable for three variet referred to: 1. That constituting the storm-advance. 2. A stratum of infrequ texture combined with cumulus as noted on September 25, 1872. 3. A sort that res bles haze, but of much greater density and obscuring cirrus compounds, sometin assuming a smoky or red appearance. This latter variety has been frequently observ with a remarkable striation, the lines extending precisely into magnetic north.

"CURTAIN" CLOUD.

The cirrus cloud, nearly losing its identity before an *interior eddy*, was observed, one occasion, to resemble a cluster of grapes, or rather *curtains* irregularly looped, was naturally followed by rain.

PRACTICAL VALUE OF CIRRUS OBSERVATIONS.

I have also referred, in journal, to the apparent practical value of observations the cirrus cloud. This appears extreme when stations sea-ward do not or cannot ex

MANNER OF GENERAL CLASSIFICATION—CIRRUS CLOUD ALWAYS WELL DEFINED TEXTURE.

Lest the classification of clouds in the accompanying records appear obscure or error, I venture the sacrifice of brevity, and would state that I have considered cirrus cloud as retaining its identity so long as it does not undergo that singular well-known resolution into the aqueous or, so to speak, *melted* texture that characteri other clouds. It appears entitled to its identity from its first appearance as a se transparent stratum up through its various stages of increase, to the time of a cert massive density which, without the intervention of any compound clouds whatever sometimes seen before precipitation. I am aware that in these stages of increase i sometimes called a stratus, cirro-stratus, or whatever name seems more euphoni when none of these latter have appeared. By the way, lack of discrimination betw the two clouds, stratus and cirro-stratus, is, in itself, manifest error.

CIRRO-STRATUS AND STRATIFIED CIRRUS.

Stratiform cirrus I have *not* designated cirro-stratus, as the cloud, by that frequ disposition of its texture, loses neither identity nor title.

STRATUS.

Stratus has been limited to two varieties: "scud" and the slightly-elevated f stratum, as it appears previous to ascent and resolution into cumulus. (Two varie only in *this* climate.)

RELATIONS OF CUMULUS CURRENT.

For mere convenience in the journal I have referred to the cumulus as a lower clo The distance to the nearest upper stratum of cirrus or its compounds is always con erable; moreover, in all movements of upper strata the relations of the cumu thereto somewhat resembles those of the "scud" stratus, both being generally ac on by the surface-wind, invariably when the latter is of any strength.

CIRRUS COMPOUNDS.

It is perhaps unnecessary to assert accuracy in cirro-stratus and cirro-cumul which necessitate the constant exercise of delicate judgment.

FOG.

But little fog prevails during the months from October to April, inclusive. This rm of cloud will be thoroughly examined with regard to its proportion to other cloud- ess during the ensuing summer. A review of the reports proves the *upper* clouds, as ell as the lower, to conform *very* frequently to the direction of the surface-current.

HENOMENAL RECORD.—STORM-CENTERS OF BEHRING SEA AS CIRCULAR RESERVOIRS OF ELECTRIC FORCE.

The phenomenal record embraces observations on certain elements whose relations e still in comparative obscurity. The action of some unknown elements on the very xture of all *clouds*, under whatever phases they may appear, presents itself as a sub- ct for close research and extended observations. Whatever may be the subtle nature f that which we designate electric force, and however this may be overladen with andering, homeless theories, the most casual observer might, if thereto inclined, ecognize the centers of all the southwest Pacific storms as vast *reservoirs of electricity.* hese storm-centers, with their piercing hail, peculiar haze, and the wondrous density nd grandeur of their cumulo-stratus, offer certain and visible proof of electric action a high degree, and form a secure base for attack on the primary causes of progressive ovement. That a more thorough analysis of the attendant phenomena, assisted, if ecessary, by magnetic and other apparatus, would result in more definite conclusions, beyond a doubt.

AURORA POLARIS.

The atmospheric conditions over Behring Sea, in connection with the infrequency of ie phenomenon now referred to, are particularly favorable for tracing auroral rela- ons to storms.. Throughout all this area the cloudiness is so frequently broken that ut few nights pass without rifts in magnetic north. The phenomenon, whenever it ppears, is of very moderate intensity, and only under certain conditions is it visible all, even through the clearest skies.

AURORAL RELATIONS TO ATMOSPHERIC ACTION.

The absence of aurora during the serene intervals of westerly quadrants of storms, ie extension of peculiar *luminous haze* or *electric light* immediately preceding storms, nd the diffused glow of the aurora discerned through rifts, or even dense clouds that ccompany, are all relations constantly indicated by the journal and records. I doubt a single storm has passed the island during the winter without the appearance, al- ough perhaps obscured, of auroral light.

INCIDENTAL DEDUCTIONS.

It is, perhaps, rather foreign to logical or inductive conclusions, but a convincing roof, to my own mind, of a close connection between the aurora and atmospheric orm is, that whenever the display appears through a sky free from upper cloud I rn *mechanically* for the appearance of cirrus traces from beyond the Western Sea; nd this quasi acknowledgment is more significant from the consciousness of having ntinued the winter observations without the slightest pre-determination.

ILLUSTRATIONS OF AURORAL RELATIONS.

With references at hand for the entire winter, I cannot but allude to the long period inaction during the month of March. The heavens were sometimes partially and equently almost clear, but no trace of aurora was visible, except on March 3; and ow significant is the entry, in adjacent columns, that at this time the monotony was terrupted by those disturbers of atmospheric peace—the cirrus and cirro-stratus. fter the termination of the long interval referred to the aurora, later in the month, as also visible in evident connection with storms, as entered in phenomenal record.

EVIDENCE OF JOURNAL AND RECORDS CONCERNING AURORA.

The records of the entire season multiply these evidences; but lest future observa- ons should fail to confirm the significance of the past, I have alluded to the aurora this cursory manner, well aware that if the laws of atmospheric action and auroral henomena are found to be intimately woven, the field of research, lying beyond this ngle but important premise, is still unbroken, although perchance quite as attractive the visible phenomena that point it out.

HAZE—ITS RELATION TO STORM-CENTER.

Concerning the relations of haze, results from the storm-center induce certain imma- re suspicions that would scarcely coincide with any one of many accepted conclu- ons. I have entered observations thereon in phenomenal record, and, affixing a scale of density, find that this element attains a *great* density only in or near a storm's ce tral area. No evident relations between this haze of the center and the aurora hav yet resulted—in fact, the latter phenomenon does not appear in a storm's focus. It no less evident that there *are* relations, and those of an interesting nature.

GENERAL ELECTRIC PHENOMENA—OCEANIC AREA OF NON-DISPLAY.

This climatic area compares with all the continental western coast in freedom fro thunder and lightning, of which there is no instance thus far recorded in reports. Th area of the ocean and Behring Sea, in which these electric phenomena are *extreme* rare, has evidently no boundary on the north, extends as far as Petropauloosk on th west, and far into the Pacific Ocean on the south.

GENERAL PHENOMENA OF RECORDS.

Many other phenomena worthy of notice, however, have occurred during the winte As an instance, a remarkable alternation between hail and snow, succeeded in th evening by aurora in connection therewith, is entered in journal of October 14, 187 No one can turn the pages of such a continuous record without perception of dispr portionate results; but, as *meteorological* investigation particularly demands, they a intended, I would repeat, for reference alone.

GENERAL REFERENCE TO RELATIONS OF OCEANIC AND CONTINENTAL STORMS.

The relations which the great storms prevailing over Behring Sea bear to those a vancing over the continental interior are, by reason of the interposition of mountai chains, comparatively obscure. Those moving from a southwesterly direction precip tate heavily on the mainland coast, but whether their barometric waves penetra the interior of British America, and thereby modify or act on those of the Unit States, is a question that, even were I already versed in the dynamic relations storms, lies beyond the authority of this report to solve. I fear that simple allusio to these relations is premature, if not, forsooth, unwarrantable, assumption. Neve theless, is it not possible that any one of the violent storms of that class from wes northwest may, although yielding its moisture to the mountains, successfully advan its remaining forces over beyond those elevated chains, and then, forming a *nucleus* o the eastern plateaus, and gradually collecting new conditions of cloud and moistur move forward to the Atlantic coast, retaining, as it were, the barometric life and int rior causes of progression that originally forced the storm over the waters of the Nort Pacific?

Labyrinthian as these currents and waves of atmospheric action now appear, th secrets of their relations cannot be quite invulnerable. Analogous currents of the A lantic Ocean and the dependence of European climate thereon open a route of inqui which will doubtless penetrate any obscurity thrown over it by the configuration our mainland coast.

The climate of St. Paul Island closely resembles that of the ocean district, of whic *Iceland* is representative; and the day is evidently approaching when the vigorou growth of Pacific commerce and navigation will so encourage practical meteorolog that a satisfactory reply can be given to the natural inquiry—Is the area north of th Atlantic Isles a key to any class of American storms?

I am, sir, very respectfully, your obedient servant,

CHAS. PATTISON FISH.

The CHIEF SIGNAL-OFFICER, U. S. A.,
Washington, D. C.

PAPER 15.

REPORT OF METEOROLOGICAL OBSERVATIONS MADE AT MOUNT WAS INGTON, NEW HAMPSHIRE, DURING THE MONTHS OF MAY AND JUN 1873.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS FOR
BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., August 15, 1873.

SIR: I have the honor to submit the following detailed reports of the special meteo ological observations made in compliance with your instructions, at Mount Washin ton, New Hampshire, from May 1 to June 30, 1873. Two stations were occupied du ing May, and four during the month of June, and, in addition to their records, the re ular observations made for the same period at Portland, Me., are given for purposes comparison.

Instruments used at the several stations.

NO. 1.—SUMMIT.

Barometer No. 1797, (Green's;) instrumental error, —.005.
One extra barometer; not used.
Two standard thermometers, (Signal-Service pattern, Green's.)
One maximum and three minimum thermometers, (Green's.)
One standard hygrometer, (Signal-Service model, Green's.)
Two Robinson anemometers, (Signal-Service model,) with electrical attachments f self-registration.
Two wind-vanes, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

NO. 2.—RAILWAY-CAR STATIONED ABOVE JACOB'S LADDER.

One barometer, No. 184, (Green's;) instrumental error, —.028.
One extra barometer; not used.
Two standard thermometers, (Signal-Service model, Green's.)
Two hygrometers, (Signal-Service model, Green's.)
One Robinson anemometer, (Signal-Service model.)
One wind-vane, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

NO. 3.—WAUMBACK HOUSE.

One barometer, No. 186, (Green's,) instrumental error, —.011.
One extra barometer; not used.
Two standard thermometers, (Signal-service model, Green's.)
Two standard hygrometers, (Signal-service model, Green's.)
One Robinson anemometer.
One wind-vane, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

NO. 4.—BASE OF MOUNTAIN.

One barometer, (Green's,) No. 139; instrumental error, —.010.
One extra barometer; not used.
Two standard thermometers, (Signal-Service model, Green's.)
Two standard hygrometers, (Signal-Service model, Green's.)
One Robinson anemometer, with electrical attachment and standard Signal-Servic register complete.
One wind-vane, (Signal-Service model.)
One rain-gauge, (Signal-Service model.)

The barometers were carefully compared with each other after arrival at the mount ain, as shown in Sergeant Thornett's report, Paper "D," and also, after their return t this office, with the standard instrument. As the result of the latter comparison th errors of the barometers used at stations Nos. 2 and 3 were found to be as follows barometer No. 184, —.028; barometer No. 186, —.011. Barometer No. 186 was turne ver to the observer in charge of the summit-station in exchange for a defective baromter of his, and therefore its final error has not been determined.

Papers A, B, and C show the instructions given the several observers; Paper D, the pecial report of Sergeant Thornett, and Papers E and F his monthly journals for May nd June. Paper G is the journal of Sergeant Seyboth at the base station; Papers H nd I, the record of minute observations for May and June; Papers K and L, the record f the hourly observations for the same period, and Paper M the Portland observaions, of which those made at 8.02 a. m., 5.02 p. m., and 11.27 p. m., were synchronous vith those made at Mount Washington at 7.57 a. m., 4.57 p. m., and 11.22 p. m.

Very respectfully, &c.,

H. W. HOWGATE,
Second Lieut. and Bvt. Capt. U. S. A., Acting Signal-Officer and Assistant.

Bvt. Brig. Gen. ALBERT J. MYER,
Chief Signal-Officer, U. S. A., Washington, D. C.

A.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS FOR
BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, April 19, 1873.

SERGEANT: Two series of special observations will be made during the month of May t your station, in connection with a station at the base under charge of Sergeant Seyoth. These observations will be made at the times and in the manner set forth in the nclosed copy of Sergeant Seyboth's instructions, which will apply to your station as vell, so far as the making and recording of the observations are concerned. The exerience gained by you last year in connection with a similar enterprise will enable you o avoid many difficulties encountered at that time, and to render valuable assistance o the party at base. Your attention is called especially to the instructions in reference o the *minute* observations to be made for one hour each day, and the times indicated. our regular reports will be kept up as usual.

Very respectfully,

H. W. HOWGATE,
Second Lieut. and Bvt. Capt. U. S. A., Acting Signal-Officer and Assistant.

Sergt. A. R. THORNETT,
Mount Washington, N. H.

B.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS FOR
BENEFIT OF COMMERCE AND AGRICULTURE,
Washington, D. C., April 19, 1873.

SERGEANT: A series of observations at the base of Mount Washington, in connection vith the station on the summit of the mountain, will be made under your supervision uring the month of May next, beginning at 6 a. m. of the 1st, and terminating at 1.57 p. m. of the 31st of the month.

Full observations of all instruments will be made daily at the following hours, (local ime:) 1 a. m., 2 a. m., 3 a. m., 4. a. m., 5 a. m., 6 a. m., 7 a. m., 7.57 a. m., 9 a. m., 10 a. m., 1 a. m., 12 m., 1 p. m., 2 p. m., 3 p. m., 4 p. m., 4.57 p. m., 6 p. m., 7 p. m., 8 p. m., 9 p. m., 0 p. m., 11.22 p. m., and 12 midnight, making twenty-four observations each day. hese observations will be the same in all respects as those taken at regular stations, nd will be entered in the usual manner upon Forms 4, which forms will be brought y you in person to this office, when ordered in, unless otherwise instructed. In addion to these full observations, a special series will be made of the barometer alone, t intervals of one minute for one hour daily.

From the 1st to the 10th days of the month, inclusive, these special observations wi begin at 8 a. m., and continue until 9 a. m.; from the 11th to the 20th days of tl month, inclusive, they will begin at 2 p. m., and continue until 3 p. m.; and from tl 21st to the 31st of the month, inclusive, will begin at 9 p. m. and terminate at 10 p. n

This series of observations will be kept distinct from that made hourly, and will l recorded on separate sheets of Forms 4. If it is found that there is not sufficient tin to fill up the Forms 4 on station, besides attending to the other necessary work, th part of the duty can be left until the return of your party to this city, but the "Orig nal Record" must be carefully kept, and the observations entered when made, a directed in the instructions heretofore issued from this office.

Especial pains must be taken to make these readings accurate to thousandths of a inch, and the temperature of the attached thermometer will be noted as an integr part of each observation. Upon your arrival at the base of the mountain you will a once establish telegraphic communication with the observer at the summit, using fo this purpose the cable over which the regular reports from that station are sent, an will, if practicable, keep this communication unbroken during the whole period yo remain on duty at the lower station.

You will personally compare the two barometers furnished you by this office wit the standard barometer at the summit-station, noting carefully the differences in thei readings, and reporting the same on the sheet of Forms 4, used for the first day's recor of observations. This comparison of barometers must be made before the time of mak ing the first observation. As the observations at both stations must be synchronou the time-pieces used will be carefully compared and adjusted before the observation are commenced, and after that time will be adjusted three times daily, by telegrapl at intervals of eight hours each, as arranged by you with observer in charge of summit station. Two minutes before the time for taking each hourly observation, you wi call up the observer at the summit-station, and after getting his acknowledgmen will prepare for taking the observation. The signal for reading the barometer will b sent from your station one minute before the time for each reading, and the instru ments will be read in the following order:

1. Attached thermometer.
2. Barometer.
3. Exposed thermometer.
4. Hygrometer.
5. Anemometer.
6. Wind-vane.
7. Rain-gauge.

The two assistants detailed for duty with you have been selected for this work o account of their previous good conduct and the ability they have shown in the man agement of regular stations. It is believed that either of them can safely be truste to make the observations alone during a part of each twenty-four hours, and thu lessen your own labors materially. You will therefore divide the day into three tour of eight hours each, taking one tour yourself, and assigning one to each of your assist ants. The responsibility of keeping the records, of insuring the accuracy of the obser vations, and of making such reports of them to this office as may be called for, wil devolve upon you, and the work must be done with this fact kept constantly in view

The following instruments and supplies will be furnished you at this office, and mus be taken to the station under your immediate charge:

2 barometers.
2 thermometers.
2 hygrometers.
1 anemometer. (self-registering.)
1 wind-vane, (small.)
1 rain-gauge.
1 box-sounder.
15 cups Daniell's battery.
200 feet insulated wire.
30 pounds sulphate of copper.
Full supply of blank books, Forms 4, stationery, &c.

The wind-vane and anemometer can be exposed on the roof of the "Marshfield" House, and the rain-gauge in an open space near Marshfield, where it will b readily accessible at all hours. The other meteorological instruments will be ex posed in the telegraph-office, where the telegraph instrument can be put in the summi circuit for exchange of signals or other communications by means of the small switc in the office. Board for yourself and assistants can be had from Mr. Michael Mul larvy, in charge of railroad-station. Mr. Aiken, of the Mount Washington Railroad has kindly given this office permission to use such facilities at the station as may b necessary to carry out your instructions in this matter. You will be careful to leave th buildings and other property of the railroad company occupied or used by yourself and party in as good condition as you found them. On the completion of the duties se orth in this communication, you will remain at your station until orders and transpor- ation are received from this office, but need not continue the observations after the 1st of May, unless otherwise instructed before that date. Should one or more of your arty become sick, or in any way become unfit for duty, the fact, with nature and prob- ble duration of illness or injury, will be promptly reported by telegraph to this office, n order that suitable action may be taken about supplying additional assistance, if ecessary. The value of these special observations depends wholly upon their being nade synchronously at the upper and lower stations, and especial attention must be aid to the accurate comparison of time, as before ordered.

Very respectfully,

H. W. HOWGATE,
Second Lieut. and Bvt. Capt. U. S. A., Acting Signal-Officer and Assistant.

Sergt. ROBERT SEYBOTH,
Washington, D. C.

C.

WAR DEPARTMENT, OFFICE CHIEF SIGNAL-OFFICER,
DIVISION OF TELEGRAMS AND REPORTS
FOR THE BENEFIT OF COMMERCE,
Washington, D. C., May 24, 1873.

SERGEANT: The special series of observations ordered for the month of May at your tation, and that at the base, as per inclosed copy of instructions, dated April 19, 1873, vill be continued during the month of June at the same hours and times as set forth herein at both stations, and also at the two new ones to be established June 1, as per rder of this date. All these stations will be under your general supervision, and you vill be held responsible for their successful management and working. The two new nes will be connected by telegraph with the present stations, putting the instruments ent for them on the line, there being battery enough now there, it is believed, to vork all satisfactorily.

As it is desirable to have the stations as nearly equidistant from each other as prac- icable, it is suggested that No. 2 be put at the "Gulf tank," and No. 3 at the "Waum- ack," if it can be done so as to work properly. If this cannot be done, you will do he next best that is practicable, and report your action, with locations selected, to his office. You will see that full and complete records are kept of all observations at he several stations, and that they are brought to this office as per original instructions. 'he *minute* observations will be made at the same hours, and on the same days of the nonth, as ordered for May.

Very respectfully,

H. W. HOWGATE,
Second Lieut. and Bvt. Capt. U. S. A., Acting Signal-Officer and Assistant.

Sergt. A. R. THORNETT,
Mount Washington, N. H.

D.

SUMMIT OF MOUNT WASHINGTON, NEW HAMPSHIRE,
June 5, 1873.

SIR: Acting under instructions from the Chief Signal-Officer, I made application, in ne latter part of last month, to Mr. Walter Aiken, of the Mount Washington Railroad ompany, for permission to occupy two points on Mount Washington, New Hampshire, s signal-stations, during the month of June, 1873, for the purpose of making a series f special meterological observations.

Mr. Aiken responded by placing the "Waumback House" at the disposal of the signal-service for the time and purpose above mentioned; as also a railroad-car altered as to form a tolerable protection in ordinary weather, which was brought fro the base and placed on the upper ledge of "Jacob's Ladder," in juxtaposition to t two-mile post.

The assistant observers sent to fill the new stations arrived in Littleton, N. on the 28th of May, and I telegraphed to Private Allen L. Bowie, directing hi not to leave that town without first assuring himself that the stores and miscellaneou property, purchased for the comfort of the men, had been forwarded to the base. the articles were not ready for transportation, Private Bowie considered it best reach the base of the mountain without delay, and trust to the promises of the trade men to have the freight forwarded in good season. But, after waiting until the eve ing of the 31st of May, I was obliged to take a team from the base, and, by travelin over-night, succeeded in furnishing the stations on the 1st of June.

On May 30 the stations were opened, and instruments mounted. Telegraph com munication was established, on the same day, by running the cable into the office and attaching it to the box-sounders brought from Washington. Supplies were issue and I filled up the time in passing between the stations to satisfy myself that nothin important had been forgotten.

The barometers were compared with those at the base and summit stations on Ma 31. The following are the uncorrected readings of the several instruments:

Time.	Station No. 1.*		Station No. 2.		Station No. 3.	
	Att'd ther.	Bar.	Att'd ther.	Bar.	Att'd ther.	Bar.
9.10 a. m	63	24.002	63	23.970	67	24.0
9.20 a. m	62	24.002	61.5	23.959	63	24.0
9.30 a. m	61.5	24.000	62	23.950	63	24.01

1.50 p. m	61	27.539	60	27.555	62	27.5

* Instrumental error, +.005.

A copy of the following was handed to each observer in charge of a station for h guidance during the month of June, 1873:

SUMMIT-STATION, (No. 1,)
Mount Washington, New Hampshire, May 31, 1873.

On and after June 1, 1873, the time for making the observations on the several st tions will be regulated as follows:

Station No. 1 will give the time for adjusting the time-pieces at the several statio at 8.30 a. m., 4.30 p. m., and 12.30 a. m. daily.

Station No. 4 will call up each station at the times specified for making the hour observations, and receive the usual acknowledgment.

TELEGRAPH CALLS.

Station No. 1—M. W.
Station No. 2—S. O.
Station No. 3—D. S.
Station No. 4—J. S.
General call for all stations—Numeral 1.

ALFRED R. THORNETT,
Observer-Sergeant Signal-Service, U. S. A.

STATION NO. 2

s situated exactly at the two-mile post, which is on the upper ledge of "Jacob's Lad-
er," and about two hundred yards below the "Gulf tank." Its bearing from the sum-
iit is 35° west of north. This station consists of a railroad-car 23 feet six inches long
y 7 feet 3 inches wide, and 6 feet 3 inches in height, interior measurement, clap-
oarded, and braced to secure it as much as possible from the influence of extraordi-
ary winds. There are two windows and one door.

West window: 2 feet 2 inches high, by 2 feet 4 inches wide.

North window: 2 feet 4 inches high, by 2 feet 6 inches wide.

Door: Opens to the north, and is 5 feet 10 inches high, by 2 feet 6 inches wide.

Disposition of instruments.—Barometer-cistern 5 feet 3 inches above the ground.
'hermometer and hygrometer (slanting roof-shelter) 1 foot from the panes of the win-
ow facing north, and in the open air, and the bulbs are 5 feet above the ground.
nemometer and anemoscope exposed upon the roof of the building. The rain-gauge
s secured upon the adjacent rocks, and at a sufficient distance from any disturbing in-
luence.

STATION NO. 3.

The office of this station is situated on the ground-floor and in the south end of the
'Waumback House," which stands about fifty yards above the first mile-post, and
onsequently nearly two miles from the summit.

Length of office, 13 feet; width of office, 12 feet; height of office, 8 feet.

West window: 2 feet high, by 2 feet 8 inches wide.

South window: 2 feet 3 inches high, by 1 foot 8 inches wide.

One door leading from the office to a sleeping-apartment is 6 feet 7 inches high, by 2
eet 8 inches wide.

Another door leads to an unoccupied room, and measures 6 feet 2 inches high, by 2
eet 8 inches wide. Its bearing from the summit is 10° north of west.

Disposition of instruments.—Barometer-cistern and thermometer-bulbs 7 feet 6 inches
bove the ground. Thermometer and hygrometer exposed 1 foot from a window facing
orth, (roof-shelter,) and in the open air. Anemometer and anemoscope upon the roof
f the building. Rain-gauge exposed on the ground, and free from any obstruction.

The distance from the base to the summit along the line of railway is nearly three
niles, therefore the several stations are almost equidistant. It would be difficult to
stablish them in better positions.

Observers and assistants worked with a will to have all ready by the 1st of June,
nd everything is being done to secure a reliable record of the work performed during
he month.

I have the honor to be, sir, very respectfully, your obedient servant,

ALFRED R. THORNETT,
Observer-Sergeant Signal-Service, U. S. A., in charge of Stations.

The Chief Signal-Officer of the Army,
Washington, *D. C.*

E.

Daily journal for the month ending May 31, 1873.

Summit of Mount Washington, New Hampshire,
June 1, 1873.

May 1, 1873.—The barometer gradually rose from 30.11 at 1 a. m., to 30.15 at 8 a. m.,
nd oscillating but very little; was very steady at 30.05 to 30.07 after 2 p. m.; mean
arometer, 30.10. The temperature fluctuated between 22° and 25°; mean thermome-
er, 24°.0. The day opened with a steady northwest wind, which changed to west at

10.30 a. m. and remained steady afterward. From 1 a. m. to 8 a. m. the velocit steadily decreased from forty-two to fifteen miles per hour at 4 p. m., and sinking to brisk wind at night. Clear weather until 9 a. m., when a few cumuli appeared, moving with the prevailing wind, and gradually increased in volume until the sky wa about one-half covered. These clouds disappeared as night approached, leaving th sky, above the summit, clear. About one-quarter stratus streaked the horizon.

May 2.—Up to 9 a. m. the barometer was steady at 30.06 and 30.07. From tha time a steady decrease of pressure was observed, and at midnight the instrumen gave a reading of 29.82; mean barometer, 29.956. The temperature was steady a 24° and 25° until 6 a. m., and then steadily increased to 32° at midday. A gradua decrease took place through the rest of the day, to 25° at last observation; mea thermometer, 28°.0. The wind continued to blow steadily from the west during th early part of the day, became fitful in the early afternoon, backed to steady sout at 1.30 p. m., and remained so for the rest of the day. Brisk and fresh velocity, risin to a moderate gale at night. The wind moderated very preceptibly through the day light hours. Fair weather up to 1 p. m., when the clouds descended and capped th mountain, culminating in a steady fall of light snow at 2.45 p. m., which continue all day. At 4 a. m. a small quanty of cirro-stratus clouds was observed; these gav place to a large quantity of cirro-cumulus at 6 a. m., which in time gradually lost it distinct formation and became absorbed in a uniform veil of stratus in the latter par of the forenoon. The upper clouds moved with the prevailing wind.

May 3.—The barometer continued falling to 29.70 at midday, and then remaine nearly steady until 9 p. m., when the mercury gradually rose to 29.76 at last observation; mean barometer, 29.716. The temperature was steady at 24° and 25° up to 4 p m., then gradually decreased to 19° at midnight; mean thermometer, 22°.5. From to 4 a. m. the wind oscillated between the points of south and east, settling to east a 4.50 a. m.; between 6 and 7 p. m. it suddenly chopped round to northwest, settled t north shortly after, and remained steady for the rest of the day; moderate-gale velocit prevailed through the early part of the day, gradually rising, as evening advanced, t a storm, averaging sixty miles per hour. Snow ceased falling at 1.25 a. m., but th weather continued threatening until it recommenced falling lightly at 6.15 a. m. Thi continued until 6.10 p. m., when the wind, suddenly changing to the northwest brought clearing weather. The clouds rose rapidly above the summit, and an extensive view of the surrounding country was obtained. As night approached the cloud (stratus) gradually contracted, so that about one-half of the sky was visible, and fai weather set in. The mountain is now covered with snow to a considerable depth. In some places the drifts are almost beyond measurement, rising and falling in hug waves from "Jacob's Ladder" to the summit. Below "Jacob's Ladder" the dept varies from 2 to 8 or 9 feet, but shows signs of breaking up.

May 4.—The barometer rose gradually to 29.92 at 4 p. m., and then fell to 29.85 a midnight; mean barometer, 29.849. The temperature was very steady up to 8 a. m at 20° and 21°; rose to 24° at 11 a. m., where it remained steady until after 1 p. m. then steady at 23° until 6 p. m., and at 22° for the rest of the day. Mean thermometer 21°.7. At 6.30 a. m. the wind backed from north to northwest, and to west at 12.45 p m., blowing steadily from the latter quarter up to midnight. Storm velocity fell of to "high" and moderate "gale" through the middle of the day, but rose to fifty mile per hour in the afternoon and late at night. About one-quarter stratus cloud hung upon the horizon in the early morning. This gradually disappeared, and from 6 a. m. until 2 p. m. only a slight haze (below the summit) thickened the atmosphere. Betwee 2 and 3 p. m. cumulus clouds, moving from the northwest, partially covered the sky but were dissipated a little before sundown, and clear weather prevailed until, at a little before midnight, a small quantity of stratus appeared first above the summit.

May 5.—The barometer continued falling to 29.82 at 5 a. m.; after that hour it rose (irregularly) through the day to 30.08 at last observation; mean barometer, 29.984. The temperature fluctuated but very little. It was steady at 22° from midnight to 9 a. m.; at 23° from 10 a. m. to 5 p. m., and then gradually decreased to 20° at midnight. Mean thermometer 21°.7. A very steady west wind all day, changing by northwest to north at night. Up to 9 a. m. we experienced heavy gale and storm velocity, which gradually abated during the forenoon, and settled to a brisk wind in the early afternoon. From 4 p. m. the velocity oscillated between brisk wind and moderate gale, suddenly rising to a heavy gale at 11 p. m. Fair weather opened the day, but toward 3 a. m. dense masses of cloud accumulated over and around the summit. At 3.45 a. m. snow began falling steadily, and continued until 10.30 a. m. Cloudy weather until 12.30 p. m., when the clouds appeared to be thinning, and shortly after 2 p. m. they rose above the summit, showing about three-fourths cumulus moving from the west, and a clear atmosphere below. The clouds gradually disappeared as the day passed, leaving a slight haze hanging over the country below the surrounding summits, and from sunset to midnight the weather was clear. For several weeks past we have experienced considerable difficulty in cutting our way out of the depot and in letting daylight through the windows. Enormous drifts of snow have formed about the building, and as fast as a passage is cut out, and the windows cleaned, the wind drives in the snow to fill up the gaps, so that the force is usually divided into cook, observer, and snow-shoveler, consequently time does not hang very heavily upon our hands. The temperature has been, and is, so constant below 32°, that it is difficult to say when this monotonous state of things is going to change. One drift reaches more than half way up the roof of the depot.

May 6.—The barometer rose to 30.21 at midday, and the readings showed very little variations during the remainder of the day. The instrument gave evidence that the pressure of the atmosphere was very uneven, and a great deal of care had to be exercised, while the minute observations were being made, to insure a correct record of the height of the mercury, which was continually oscillating and balking the eye of the observer. At this station we frequently experience similar trouble. Mean barometer, 30.192. The temperature was steady from 19° to 22°. It increased from 19° at 1 a. m. to 21° at 9 a. m., stood steady at 22° until 7 p. m., and then gradually decreased to 20° at midnight. Mean thermometer 20°.5. The wind continued from the north with heavy gale velocity, until it changed rapidly to west between 1 and 2 p. m., and settled at that point for the rest of the day. At sunset the velocity decreased to high wind, but shortly after increased to a heavy gale, and between 11 p. m. and midnight attained a maximum for the day of sixty miles per hour. Clear weather prevailed. A light haze, which hung over the country below the summits in the early part of the day, became very dense as daylight ended. The atmosphere was comparatively clear after 10 p. m. The only clouds that were to be seen were a few isolated stratus, which appeared now and then through the day, and always near the horizon.

May 7.—The barometer rose to 30.41 at last observation. Mean barometer, 30.380. The temperature decreased to 19° at 3 p. m., and remained steady until after 6 a. m., when a steady increase set in, the mercury jumping from 24° to 28° between 10 and 11 a. m., and to 32° at 12.22 p. m. From 1 p. m. a gradual decrease took place, and at midnight the thermometer read 26°; mean thermometer, 26°.2. The wind continued from the west until 6 a. m., and then gradually veered round by northwest to north, but returned to west at midday, and continued so until it died away to "calm" at 7 p. m.; shortly after a breeze sprang up from the north, when it remained steady for the rest of the day. Storm velocity steadily diminished to a fresh breeze at 9 a. m., and until it fell calm at sunset. From the time that the north wind arose in the evening the velocity steadily increased to "brisk," and varied but very slightly through the rest of the day. Throughout the twenty-four hours the lower country was covered with a light haze, and a few cirro-stratus clouds appeared and disappeared at intervals of several hours. The sun's heat is beginning to make a decided difference in the appearance of the mountain. A large quantity of snow has melted within the last two days, and the railroad-track is steadily emerging from its winter covering. The rocks are peeping out, and a few days of fine weather will leave them comparatively clear. From 8 to 9 p. m. the horizon between the points of north and northwest was fringed with an auroral belt, which had the appearance of a lambent flame of a deep-red color at the base, and of a light yellow at the tips. The aurora was almost stationary, remained with little apparent change for nearly thirty minutes, and then gradually died away.

May 8.—The barometer remained stationary at 30.38 to 30.42 until 3 p. m., and then gradually dropped to 30.31 at midnight. Mean barometer, 30.382. The temperature rapidly increased from 25°, in the early morning, to 36° at 11 a. m.; was steady at 35° and 36° until 4 p. m., and gradually decreased to 30° at last observation. Mean thermometer, 31°.7. The wind continued from the north with greatly diminished velocity, until it fell calm between 3 and 4 a. m. From 9 a. m. to 4. p. m. there was a gentle and fresh breeze from the north, inclining a little to northwest. Calm for an hour between 4 and 6 p. m., then brisk wind from the northwest (changing again to north at 7.30 p. m.) until the close of the day. The ravines and valleys are still filled with a light haze. To-day the sky has been from one to three-fourths covered with a great variety of cirrus cloud, well-defined cirro-stratus predominating. At times immense horse-tails of pure cirrus were observed, but they were rapidly divided into the various formations to which this cloud is subject. These clouds stretched across the sky in parallel lines, which appeared to converge in the east and west. They moved very slowly from the northwest. A broad halo encircled the moon. The day has been very fine, and the snow is certainly going away rapidly. The temperature has been higher to-day (36°) than at any time since the year began. Altogether we begin to feel that winter has really gone, and that summer is approaching.

May 9.—From 1 a. m. until 2 p. m. the barometer oscillated between 30.24 and 30.28, and then dropped to 30.18 at last observation. Mean barometer, 30.231. The temperature gradually decreased to 24° at 6 a. m., and remained steady for nearly two hours after; then steadily increased to 28° at 11 a. m., and from that hour the mercury oscillated between 26° and 29°; mean thermometer, 27°.2. Shortly before 1 a. m. the wind changed direction (very suddenly) to southeast, where it remained steady until after 8 a. m. From that time until 10 p. m. it was unsteady, frequently veering to east and back to southeast, but settled to southeast late at night. High and gale velocit prevailed. Fair weather prevailed until 3 p. m., when it became cloudy, and at 6.1 p. m. sleet began to fall; stopped at 10.30 p. m.; threatening weather closing the day Early in the morning a few stratus clouds appeared at intervals, but the principal cloud were ill-defined cirro-stratus, moving with the prevailing winds. From 6 a. m. th sky was partially covered with a light veil of stratus, apparently of a uniform thickness, and rising high above the summits. After 4 p. m. the ravines began to fill wit dense masses of cloud which were rapidly advanced by the wind from the southeas until, at 4.30 p. m., the summit was completely shrouded, and remained so for the res of the day. The sleet fell in minute particles, and was not very heavy. A team ha been driven into the base to-day. This is the first time (this year) that wheels hav been able to pass over the last two miles to the mountain. The mill is reported a ready to work next week. Last year it started on the 5th of May.

May 10.—The barometer fell slightly through the early part of the day, but after a. m. rose steadily to 30.17 at last observation. Mean barometer, 30.151. Up to 6 a m. the temperature oscillated between 28° and 30°, steadily increased to 38° in th early afternoon, and was very unsteady afterward, between 32° and 35°. Mean thermometer, 33°.5. After blowing unsteadily from the south and southwest in the morning the wind settled to the former point at 8 a. m., and remained steady until 5 p. m. when it became very uncertain, coming from all points between southwest and northwest, and continued to be unsettled during the latter part of the day; calm at midnight. Heavy gale and storm velocity gradually subsided after 10 a. m. to "calm" a last observation. Threatening weather opened the day; heavy rain fell from 7.30 t 8.22 a. m., and the summit was shrouded with saturating clouds until 3.30 p. m., whe clearing weather set in, and from sunset until midnight the weather was fair. In th latter part of the day the ravines were filled with an immense quantity of fleecy cloud which formed a level and unbroken sea as far as the eye could reach, giving to the few peaks that were not covered the appearance of small islands, and utterly concealing the surrounding country from observation. A few cirrus clouds moved with the prevailing wind.

May 11.—The barometer fell throughout the day to 29.88 at last observation. Mean barometer, 29.904. The temperature fluctuated between 32° and 38°, and was very uneven, sometimes falling or rising 3° in less than thirty minutes. The highest temperature was observed at 2 p. m. Mean thermometer, 35°. Between 1 and 2 a. m. a brisk wind arose from the southwest, which backed to south at 11 a. m., and then remained steady for the rest of the day. The velocity oscillated between gentle and high wind. The day opened with very fine weather. This morning the appearance and position of the clouds were much the same as when last observed, but the illusive nature of the scene was much enhanced by the faithfulness with which the clouds simulated the well-known features of the great watery element. Masses of cloud rushed between the mountain-peaks that arose above them, forming cataracts of great volume and beauty. Breakers rolled and tossed above the mountains immediately beneath the surface, and pretty bays were created in the irregular shores of the various exposed summits. Waves of light and shade of so rare a kind swept over the whole expanse when the sun rose above the horizon, that words fail to convey the barest impression felt by those who witnessed the sublime creation. The illusion was so complete that we almost forgot the physical features of the surrounding country in the contemplation of the wonderful beauty of the aerial ocean which shut it out from view. Shortly after 7 a. m. the summit was suddenly enveloped in dense clouds, showers followed, and at 2.47 p. m. heavy rain began. This continued up to 11.30 p. m., but diminished in quantity as the day wore on. Cloudy weather at last observation.

May 12.—The barometer fell steadily in the early morning, and then remained comparatively steady for the rest of the day. Mean barometer, 29.756. The temperature decreased to 32° at 3 a. m.; was very steady at that point until 8 p. m., when it gradually decreased and the mercury settled to 29° for the last three observations. Mean thermometer, 31°.5. At a few minutes past 5 a. m., the wind abruptly changed to north, backed to west between 2 and 3 p. m., and to northwest shortly afterward. The velocity gradually increased from gentle to high wind, and to a heavy gale after sunset. Dense clouds covered the summit in the beginning of the day. Light rain began falling at 2.40 a. m.; turned to sleet at 5.30 a. m., and ceased at 8.12 a. m. Between 3 p. m. and sunset an interval of fair weather took place. After sunset thick clouds surrounded and covered the summit, no change for the better being observed during the rest of the day. We are now very busy cutting through the large snow-drifts that have formed within and without the depot.

May 13.—The barometer fell steadily to 29.46 at 6 p. m., and then gradually rose to 29.58 at midnight. Mean barometer, 29.587. The temperature was unsteady in the morning, fluctuating between 27° and 30°; rose to 34° at 1 p. m., and from that hour decreased to 26° at last observation. Mean thermometer, 29°.5. The wind veered to the west between 1 and 2 a. m., and to northwest shortly before 2 p. m., remaining steady for the rest of the day. High and gale velocity all day. The morning opened with fair weather; a few cirro-cumulus clouds moved with the prevailing wind, and from one to two-fourths stratus hovered over and hung about the neighboring mountains. Early in the forenoon the summit became covered with dense clouds, heavily charged with moisture, and the weather for the rest of the day was very cloudy and threatening. From midday until midnight we were favored with frequent showers of light rain and sleet. These attempts were very insignificant, and the amount collected barely enough to allow of a measurement being made.

May 14.—The barometer oscillated considerably through the day, and gradually fell to 29.42 at last observation; mean barometer, 29.523. The temperature gradually decreased to 19° at night. From midday until 10 p. m., the mercury was steady at 22° and 23°; mean thermometer, 23°. The wind changed to west shortly after 1 a. m., and remained steady from that point until 10.30 p. m., when it returned to northwest. The velocity fluctuated between high wind and storm, reaching a maximum of sixty miles per hour. Through the daylight hours there were frequent lulls, the velocity diminishing to thirty miles per hour. The weather continued to be very cloudy and disagreeable; light snow began falling at 4.15 p. m., and continued for the rest of the day, coming down very heavily after 7.30 p. m. At midnight I estimated that six inches had fallen on a level, but it was difficult to make an accurate calculation. The engineers have arrived at the base, and intimate that they expect to run a freight-train to the summit early in the coming week. The snow is at a standstill, and frozen into solid masses of ice.

May 15.—The barometer rose steadily all day to 29.87 at last observation; mean barometer, 29.734. A rise of 0.16 between 8 a. m. and midday was forwarded at 5 p. m. I was unable to raise Littleton at the proper hour for telegraphing the report. The temperature increased from 19° at 2 a. m. to 24° at 11 a. m., remained very steady at 24° and 25°, sinking to 23° at midnight; mean thermometer, 23°.2. A northwest wind changed to west early in the afternoon, and remained steady for the rest of the day. Storm velocity in the morning, fluctuating between fifty and seventy-two miles per hour. It gradually decreased to a steady, brisk wind, and from 3 p. m. until midnight it varied very little. Heavy snow continued through the early morning, ceasing at 4.10 a m. As the forenoon advanced there was a material difference in the density of the clouds. They were much more transparent, and at times the sun shone through them very brightly. Toward the close of the afternoon they became almost opaque, and the weather was cloudy until after 10 p. m., when the clouds continued to the south and southeast, covering about one-fourth of the sky. A display of auroral streamers was observed between the points of north and east. This took place between 10.30 p. m. and midnight. I went to the base this evening with mail. Preparations are being made to run a train to the summit at the earliest opportunity.

May 16.—The barometer fell to 29.81 at 6 a. m., rose to 29.88 at 11 a. m., and then remained comparatively steady through the rest of the day. Mean barometer, 29.873. The temperature gradually increased to 29° at 1 a. m., remained steady at 28° and 29° during the afternoon, and gradually decreased to 27° at night. Mean thermometer, 27°.2. The wind oscillated between west and northwest in the forenoon, settled to west at midday, and was very steady afterward. Brisk velocity prevailed. High wind at night. With the exception of an interval of fair weather, between 5 and 8 a. m., the weather was very cloudy. I returned to the summit this morning with a load of mail and other necessaries, accompanied by two carpenters employed by the railroad company.

May 17.—The barometer was comparatively steady all day, showing a slight increase of pressure in the afternoon and at night. Mean barometer, 29.878. The temperature rapidly decreased from 27° in the early morning to 23° from 7 to 8 a. m., rose to 25° at 10 a. m., and fluctuated between 25° and 27° for the rest of the day. Mean thermometer, 25°.2. Between 6 and 7 a. m. the wind changed to northwest, and then held steady. The velocity oscillated between high and fresh winds. The weather was very unsettled; snow fell lightly and spasmodically at all hours. From 6.05 a. m. it fell very steadily, and continued to do so after the last observation was received. It is perhaps worthy of record that, on the 9th day of May, 1872, the temperature rose to 47 degrees, and that the highest observed temperature for the present year only reaches to 38°.

The snow on the summit is becoming deeper every day, and unless a rapid thaw sets in at an early date, this summer season will be one of notable brevity.

May 18.—The barometer showed as light but decided increase of pressure. Mean barometer, 29.933. The temperature fluctuated between 22° and 26°. Mean thermometer, 24°.2. Steady, brisk, and high wind, falling off to "fresh" for an hour or two in the middle of the day. Snow ended at 11.35 a. m. The sun broke through the clouds, now and then, for a few minutes at a time, but cloudy weather prevailed. Fair at night. The weather and general appearance of things outside are too monotonous to afford much matter for record.

May 19.—The barometer fell to 29.87 at 5 a. m., and then rose steadily to 30.14 at last observation. Mean barometer, 30.046. Up to 8 a. m. the temperature was very steady at 23°; increased to 25° in the middle of the day, and after 3 p. m. never moved half a degree from 26°. Mean thermometer, 25°.2. The wind continued from the northwest through the morning, backed to west in the early part of the forenoon, and gradually went round by the northwest in the afternoon to a steady blow from the north. Heavy squalls in the early morning, sometimes up to sixty miles per hour. After 9 a. m. the velocity suddenly diminished and oscillated between fresh and brisk wind. The day opened with fair weather; only a few stratus clouds darkened the horizon. This lasted but a short time. Soon after 3 a. m. dense masses of cloud formed in the immediate vicinity of the mountain, and rapidly ascended until the summit was completely capped. Between 9 and 10 a. m. these clouds rose to a great height, in a uniform fleecy veil, which frequently changed in appearance, but never assumed any well-defined formation. As the day wore on the clouds gradually contracted and finally disappeared. From 8.30 p. m. the sky was perfectly clear. A shower of auroral streamers appeared in the northeast at and after 10 p. m.; they were very insignificant, both in body and color.

May 20.—A steady increase of pressure continued throughout the twenty-four hours. The barometer was almost steady after 9 p. m., and read 30.33. Mean barometer, 30.297. The temperature increased from 25° in the morning to 34° at 3 p. m., where it remained steady until after 4 p. m., then gradually decreased to 30° at (and after) 10 p. m. Mean thermometer, 30°.2. Steady north wind, with fresh and brisk velocity gradually died away to a dead calm at a little past 2 p. m. This lasted until 6.15 p. m., when a light west wind arose. As the day advanced the direction frequently changed to southwest, and settled at that point shortly before midnight. After 8 p. m. the velocity increased to a fresh breeze, averaging seven miles per hour. Up to early afternoon the sky was free from clouds, and everything within view stood out in bold relief. Through the afternoon about one-fourth cumulus appeared, moving from the north and northwest, a light haze over the lower country, and a few stratus clouds streaked the sky in disconnected patches. As the daylight waned the clouds disappeared, and the night was very clear and placid. Sergeant Sackett brought up mail to-day.

May 21.—The barometer continued to show a decided increase in the pressure of the atmosphere until the mercury rose to 30.36 in the forenoon. After mid-day a gradual fall set in, and at last observation the instrument read 30.26. Mean barometer, 30.311. The temperature was comparatively steady between 27° and 30° through the day. It gradually increased, after sunset, to 32° at midnight. Mean thermometer, 31°. In the early part of the day the wind came very steadily from the southwest, but changed frequently afterward, making it very difficult to ascertain the true direction. It appeared to have a greater tendency from southwest and west than from any other point, but frequently swinging to all points of the compass. The velocity fluctuated between "gentle" and "brisk," and did not exceed twenty-five miles per hour at any time in the day. Up to 10 a. m. clear weather prevailed; only a small quantity of stratus cloud streaked the eastern sky. The upper clouds varied in quantity and appearance, changing rapidly from well-defined cirrus and cumulus to all their recognized modifications, and oftentimes stretched across the sky in a semi-transparent veil. Gray stratus clouds partially covered the sky at a considerable altitude, shortly before sunset, and remained nearly stationary until 10 p. m., when they slowly descended and covered the summit, and the weather became decidedly moist. A peculiar pale yellow colored halo surrounded the sun late in the forenoon. Although in the early afternoon, the prevailing wind came from a southern point, the upper clouds moved from the northwest. Later in the day they followed the course of the prevailing wind, crossing the point of observation. Heavy rain began falling at 11.35 p. m., and continued into the following morning. The mill at the base of the mountain commenced running to-day, sixteen days later than it began last spring. The snow is moving off very rapidly.

May 22.—The barometer fell very irregularly to 30.20 at last observation. Mean barometer, 30.207. The temperature was steady between 30° and 34°, until late at night, when it suddenly increased from 32° at 11.22 p. m., to 36° at midnight. Mean thermometer, 33°.2. The wind oscillated between west and southwest, never remaining steady for five minutes together. High and brisk velocity prevailed. Heavy rain continued through the early morning; ended at 4.46 a. m. Heavy saturating clouds covered the summit throughout the twenty-four hours. A vast quantity of snow has been swept from the mountain during the last two days. Jacob's Ladder is cleaned off, and from the Waumback House to the base the ground is bare.

May 23.—The barometer fell steadily all day to 29.97 at last observation. Mean barometer, 30.128. The temperature increased to 43° at 7 p. m., stood steady until 8.30 p. m., and then decreased to 41° for the last three observations. Mean thermometer, 40°.0. Southwest wind in the morning changed to west at 7 a. m., and continued so, with an occasional puff from the southwest, for the rest of the day. Fresh to high velocity until after sunset, when it rapidly increased to a storm of sixty miles per hour. Cloudy weather continued until after 9 p. m. From that time the sky was about three-fourths covered with stratus clouds, which hung about the neighboring summits. At 10 p. m., and for about thirty minutes after, we observed frequent flashes of sheet-lightning, which passed a considerable quantity of electricity through our stove pipes. The lightning appeared to emanate from a mass of inky-black clouds situated in the southwest, and in close proximity to Mount LaFayette. Mr. Aiken tried to run a train to the summit to-day, but failed in the attempt through a boiler-pump getting out of order. Men were employed in shoveling snow from the track, in some places to a depth of 5 and 6 feet.

May 24.—The barometer oscillated between 29.97 and 29.73. The maximum pressure occurred at 1 a. m. and the minimum at 5 p. m. Mean barometer, 29.846. The temperature gradually decreased to 35° at 8 a. m., and then steadily increased to 41° in the afternoon. After 5 p. m. the thermometer showed a steady temperature of 37°. Mean thermometer, 37°.7. There was a steady west wind all day. The velocity rose to seventy-two miles per hour in the early morning, high wind through the forenoon, and from 5 p. m. until midnight it stormed at the rate of from sixty to seventy-two miles per hour. Up to 9 a. m. the weather was very cloudy and generally dismal. From that hour until 6 p. m. fair weather prevailed, enlivened by a rain-storm and vivid flashes of lightning from 1.30 to 3.30 p. m. As the day closed heavy saturating clouds covered the summit, and continued so for the balance of the day. The upper clouds changed their formation every minute, and moved in various directions, massing and separating repeatedly. Telegraph communication was considerably disturbed by the atmospheric electricity. Mr. Aiken succeeded to-day in running a train to the summit, and three more carpenters were brought up to assist in completing the new hotel.

May 25.—There was a steady rise in the barometer all day; at midnight the instrument read 30.25. Mean barometer, 30.136. The temperature was comparatively steady from 35° to 37° up to midday; steady through the afternoon at 40° and 41°, and decreased to 37° at last observation. Mean thermometer, 37°.2. The humidity was very uneven; especially so at night. Immediately after the 8 a. m. observation was recorded the wind changed to north, and blew very steadily from that quarter until late in the afternoon, when the direction became uncertain, and gradually backed round by northwest to west. The velocity rapidly subsided to a light and fresh breeze from and after the midday observation. From 8 a. m. the sky cleared rapidly and the clouds covering the summits passed away from sight in a series of wonderful dissolving views. The principal clouds (cumulus) tumbled about the ravines in the early part of the day; toward midday they gradually ascended above the summits, leaving a light haze behind to fill the lower country. Upper clouds moved with the prevailing wind. After sunset the stars came out in great splendor, and clear weather prevailed. A few stratus clouds streaked the horizon at night; hazy below.

May 26.—The barometer rose steadily until nearly mid-day, and then fell to the position it held at the commencement of the day. Mean barometer, 30.290. The temperature increased to 47° in the afternoon, and oscillated a good deal during the day. Mean thermometer, 43°.7. The wind veered to north at 3.30 a. m., and died away to a calm at 6.15 a. m. Shortly before 10 a. m., a baffling light wind sprang up from a southern point, oscillating between south and southwest; a steady breeze from the west after 1 p. m.; gentle and fresh velocity in the morning and afternoon; brisk in the latter part of the day. Very fair weather has prevailed throughout the day. A light haze has covered the country below the summits, and the upper clouds (principally cirro-cumulus and light stratus) have moved with the prevailing wind. As night set in the clouds gradually covered the sky in the form of light stratus, and the rapidly-increasing humidity leads us to expect a change in the weather. Within the last few days the snow has melted with astonishing rapidity. Only a few broad patches of soft snow are to be seen, and miniature torrents are rushing down the mountain-sides. For several days past the Ammonoosuc has been unusually high.

May 27.—The barometer fell slowly all day to 30.08 at last observation. Mean barometer, 30.154. The temperature was very steady at 45° until after 9 a. m., increased to 50° at 1 p. m., and then fluctuated between 47° and 49°. Mean thermometer, 47°.0. Wind from the west, with a slight inclination to southwest, through the afternoon. The velocity varied considerably, oscillating betwen fresh wind and a moderate gale. Warm saturating clouds covered the summit, culminating in light rain at 2.35 a. m.; ended at 4.32 a. m.; clearing weather set in immediately after the rain ceased falling. The weather for the rest of the day was fair. The upper clouds were very commonplace, presenting little variety. They moved with the prevailing wind. At night the sky was about two-fourths covered with light stratus clouds, drifting with the wind quite close to the summit. The stars shone clearly through the breaks in the clouds. A train arrived to-day, bringing four more carpenters and a supply of provisions.

May 28.—The barometer showed an increase of pressure during the forenoon, and then steadily sank to 29.95 at last observation. Mean barometer, 29.982. The temperature gradually descended to 41° at midnight. Mean thermometer, 46°.0. There was a steady west wind all day. Storm and heavy gale velocity in the early morning dropped to a high wind through the greater portion of the day, and increased to a stiff gale at midnight. The weather has been very uninteresting. Summit covere with heavy clouds, which broke at times sufficiently to tantalize us with the fin prospect in the distance. Painters are at work in the new hotel. The party sent t fill the new stations here arrived in Littleton this p. m. I telegraphed Private Bowi to bring everything with him, and to make all haste in getting to the base.

May 29.—The barometer steadily rose to 30.15 at 5 p. m., and from that time gradually dropped to 30.03 at last observation. Mean barometer, 30.099. The temperatur was comparatively steady between 39° and 42°. Mean thermometer, 41°.2. West win through the day, northwest after 8:30 p. m. Velocity gradually diminished from gale in the earliest hours, to tolerably steady brisk and high wind. Light rain set in a 12.22 a. m., and continued until 5.26 a. m. Rain-fall .26 of an inch. Cloudy weathe through the forenoon. Turned fair at midday. Upper clouds (¼ to ¾ cumulus) move from the west. Clear below. I met the assistants sent to fill the new stations at th base this evening. Some portion of the baggage will arrive to-morrow. Everythin has been done by the railroad officials to expedite the placing of the stations in habitable condition. All unite in the endeavor to make the new-comers as comfortabl as circumstances permit.

May 30.—The barometer fell steadily to 29.92 at 5 a. m., rose to 30.14 at 11.22 p. m and fell to 30.09 at midnight. Mean barometer, 30.050. After 3 a. m. the temperatur rapidly decreased until 8 a. m., and then the mercury was comparatively steady oscillating between 26° and 28°. From 6 p. m. the thermometer showed a ver even temperature of 24°. Mean thermometer, 25°.7. Wind from the west an northwest; steady from the northwest during the daylight hours. The velocity rapidl increased to a storm of sixty-six miles per hour at 6 a. m., fell to brisk and hig through the day, and increased to sixty miles per hour at last observation. Threatening weather opened the day. Heavy rain fell from 2.10 a. m. to 5.12 a. m. Cleare rapidly, and fair weather prevailed. Clear at night. The principal clouds were ligh stratus and well-defined cumulus, alternately rising high above the summits and fillin the ravines. When above the summits, the clouds moved from the west and northwest. I filled the day in superintending the fitting up of the new stations, and makin the necessary telegraph connections. When the instruments were put in circuit th line worked well at all points. Littleton operator provided extra battery, and everything is going on in a satisfactory manner. The observers and assistants worked wit a will to have all prepared for beginning operations on the 1st of June.

May 31.—The barometer was comparatively steady after 2 p. m., from 30.30 to 30.33 Mean barometer, 30.287. The temperature decreased 6° between 1 and 2 a. m. Fro 6 a. m. the mercury rose rapidly to 33° in the afternoon; nearly steady at 31° afte sunset. Mean thermometer, 28°.2. Northwest wind changed to west, and steady between 2 and 3 p. m. Storm velocity gradually diminished to a steady, brisk wind Clear weather all day; slight haze below. For two or three hours after sunset th lower portion of the mountain was enveloped in a dense smoke, which proceeded fro fires accidentally started by wood-cutters. A considerable portion of the day wa passed in conveying the new barometers to the base and summit, for comparison wit the instruments at those stations. As there was no evidence that the articles purchased at Littleton (for the use of the new stations) had been forwarded from Bethlehe railroad-depot, I procured a team and proceeded to that point for the purpose o transporting them to the base without further loss of time.

INSTRUMENTS, PROPERTY, ETC.

No change in the instruments since last report. The carpet is rapidly wearing out.

ALFRED R. THORNETT,
Observer-Sergeant Signal-Service, United States Army.

F.

Daily journal for the month ending June 30, 1873.

SUMMIT OF MOUNT WASHINGTON, NEW HAMPSHIRE,
July 1, 1873.

June 1, 1873.—The barometer oscillated considerably all day between 30.10 and 30.30 Mean barometer, 30.172. After 4 a. m. the temperature steadily increased to 42° in th afternoon, and from 5 p. m. gradually decreased to 37° at last observation. Mean thermometer, 37°.5. The wind continued to come steadily from the west. By 7 a. m. the velocity increased to a stiff gale, and continued so, without much change, until nearl sunset, when it rapidly diminished to high and brisk winds. Fair weather prevailed.

Light rain fell from 8 to 10 p. m. Cloudy weather at midnight. At (and for thirty minutes after) the 2 a. m. observation, a pale yellow auroral arch was observed close to the horizon, stretching between the points of north and east. A small quantity of cirro-stratus clouds moved with the prevailing wind; well-defined cirrus and cumulus in the afternoon. I visited the new stations to-day, and found everything going on well. They were provided with stoves, &c., this morning.

June 2.—The barometer was steady to-day, with an inclination to rise at night. Mean barometer, 30.190. The temperature decreased to 28° in the early morning, increased to 36° in the afternoon, and dropped to 28° at last observation. Mean thermometer, 31°.5. Shortly before 1 a. m. the wind changed to north, and back to northwest at 7 a. m.; then remained steady until between 8 and 9 p. m., when it settled to north. Brisk and high velocity, sometimes rising to a moderate gale. The weather continues to be very fine. Upper clouds, similar to those observed yesterday. Auroral streamers covered the sky between the points of north and east, from 12.30 a. m. until daylight. Fires are still burning in the woods below, and the lower country is filled with smoke.

June 3.—The barometer rose slightly through the day, (up to 5 p. m.,) and then fell to 30.20 at 8 a. m.; steady at night. Mean barometer, 30.237. The temperature gradually increased to 41° at 2 p. m., and from that hour decreased to 37°, at last observation. Mean thermometer, 36°.2. North wind in the morning, with "calm" at intervals. Early in the forenoon the direction changed to nothwest, and after 11 a. m. settled to west. Fresh velocity prevailed. Very frequently the sky was covered with light stratus clouds, stretching in horizontal lines, and connected by a dense haze, which pervaded the surrounding country and summits. Our observations were, to a great extent, limited by the smoke ascending from fires in the valleys. Auroral streamers were observed in the northeast from 12.20 a. m. to 3 a. m., but were very indistinct in consequence of the prevalence of dense haze. A bright halo encircled the sun during the afternoon.

June 4.—There was a decided fall in the barometer throughout the day, especially after the early morning hours. At midnight the instrument read 29.77. Mean barometer, 29.885. After 9 a. m. the temperature sensibly increased until 7 p. m., when the thermometer read 48°, and remained steady there for several hours. After 10 p. m. the mercury slowly fell to 46°. Mean thermometer, 43°.7. The relative humidity ranged between 70 and 100 per cent. The direction of the wind oscillated chiefly between west and northwest, with sometimes an uneven movement to southwest. The velocity steadily increased to high wind and gale, sometimes rising to nearly fifty miles per hour, but brisk and high winds prevailed. From 2.25 a. m. and up to midnight we experienced showery weather, the rain falling, in the early part of the forenoon, quite heavily. The summit was never free from heavy saturating clouds at any time during the day. A good deal of interruption took place in the telegraphing of signals to-day. This was caused by the defective insulation between the base and Littleton, and which occasioned considerable trouble last year. I visited the stations, and found that the duties were being creditably performed, and that there was no fault in the cable. Our battery at the base is in good order, but not strong enough to work the several instruments without the assistance of the Littleton battery.

June 5.—An irregular fall in the barometer continued until it reached a maximum of 29.72 at 5 p. m. After that hour the mercury rose to 29.88 at midnight, but oscillated materially all through the day. Mean barometer, 29,819. The temperature decreased in the early morning to 39°, and then stood steady for two or three hours; gradually increased to 45° at 3 p. m., oscillating very frequently, but only to the extent of 1° or 2°. From 3 p. m. a gradual and even decrease to 37° at the last observation. Mean thermometer 40°.2. The humidity fluctuated between 80 and 100 per cent. Excepting an occasional puff from the west, the direction was steady from the northwest. High and gale velocity in the early part of the day; dropped to fresh wind through the afternoon, and rose at night to "high." Rain ended at 2.35 a. m., but until 7 a. m. the summit was covered with clouds almost fully saturated. A short interval of clearing weather showed the ravines filled with heavy cumulus and stratus clouds, which soon rose and covered this station again. At 3 p. m. rain began falling, and on descending the mountain I met a storm of hail, which extended from a little above "Jacob's Ladder" to about three-fourths of a mile below. The stones averaged a quarter of an inch in diameter. Thunder accompanied the storm, the peals following each other in rapid succession. This lasted about 45 minutes. Fair weather from 7 to 9 p. m.; cloudy at night. I visited stations Nos. 2 and 3 to see that the instruments were cut out during the progress of the storm, as I was fearful that the electricity would cause some trouble.

June 6.—The barometer rose very steadily to 30.00 at last observation. Mean barometer, 29.976. A gradual increase of temperature to 43° at 1 p. m., where it remained very steadily until 6 p. m., when the mercury (gradually) began dropping; 38° at midnight. Mean thermometer, 40°.7. Humidity steady between 90 and 100 per cent. Up to midday, the wind continued to blow very steadily from the northwest; after that time, until night set in, the prevalent wind was west, then northwest. Brisk and fresh velocity prevailed, seldom rising much above twenty miles per hour. Very ligh showers fell in the early morning and early in the afternoon. Altogether, the day ha been very cloudy and uninteresting. A very feeble attempt to clear up, which too place early in the afternoon, failed. Fair at night, with heavy cumulus clouds abov and below.

June 7.—The barometer was comparatively steady to-day, with a tendency to ris toward night. Mean barometer, 30.057. The temperature has been remarkably stead at 35° and 36° all day. Mean thermometer, 35°.7. The relative humidity remaine stationary as on yesterday. Fresh wind from the northwest prevailed until 3 p. m. calm at 8 a. m. After 3 p. m. the direction changed to north, and (gradually) to steady blow from the northeast, the velocity rising to a stiff gale of forty-eight mile per hour at last observation. Fair weather continued until between 2 and 3 a. m. when the summit became enveloped in dense clouds, containing a large percentage o moisture. Light showers of sleet and rain fell during the forenoon, and settled to steady fall of light rain at midday; ended at 5.45 p. m. Cloudy weather closed the day

June 8.—A decided and tolerably even rise took place in the barometer to-day, th instrument reading 30.32 at the last observation. Mean barometer, 30.295. Decreasing temperature in the morning—steady at 33° from 4 to 9 a. m.—increased to 41° i the afternoon, and from 4 p. m. gradually decreased to 36° at midnight. Mean thermometer, 37°.2. Humidity decreased to 72 per cent. during the afternoon, 80 at night The wind came very steadily from the northeast until 3 p. m., when it veered to east and did not change until it returned to northeast at 10.15 p. m. Storm velocity, wit a maximum of sixty miles per hour, opened the day, fell to light wind after midday and increased to brisk at night. Heavy stratus clouds rushed over the summit in th early part of the day. At 9 a. m. the surrounding country rapidly cleared, and in short time there was nothing but a slight haze between us and all below. Cumulu clouds, partially covering the sky, gradually diminished in quantity, and from 7 p. m. and excepting a few streaks on the horizon, the heavens were entirely free from cloud

June 9.—The barometer fell all day to 30.18 at last observation. Mean barometer 30.251. The temperature continued on the decrease to a minimum of 34° in the earl morning, increased after 4 a. m. to 48° at 1 p. m., where the mercury held steadil through the afternoon. From 5 p. m. a steady decrease brought the mercury down t 40° at midnight. Mean thermometer, 42°.7. After the early part of the day, the relative humidity decreased considerably, and ranged between 50 and 70 per cent. Bris wind from the northeast fell off to "gentle," and from midday a calm set in, whic was but little disturbed up to 9 p. m., when a fresh breeze sprang up in the east, gradually moving round by northeast to north at midnight. Until after midday the sk was entirely clear, and then a few cumuli appeared, moving with the prevailing win that was just dying out. Cumulus clouds prevailed in the latter part of the day, and when moving at all, appeared to come from the north or northeast. It was difficult t determine exactly which course the clouds did take; the movement was slow. Clea weather at night. The view of the mountains and departing sun from this point wa remarkably fine and exceptional.

June 10.—Comparatively steady barometer until early afternoon, after that a rathe rapid fall to 30.09 at last observation. Mean barometer, 30.152. The temperatur gradually increased and attained a maximum of 54° at 1 p. m.; steady then at 53°. From 5 p. m. the mercury gradually fell to 46° at midnight. Mean thermometer, 47°.5 To-day the humidity averaged 57.7 per cent., a minimum of 42 per cent. in the afternoon, and a maximum of 69 at night. The wind has been very changeable all day never holding long from one particular point. West and northwest wind prevailed i the morning and latter part of the day, but swept round to southwest late at night Light and fresh velocity, dropping to calm at times, rose to a high wind at midnight When not stationary the upper clouds moved with the prevailing wind, and were al unusually well-defined and in great variety. So light and airy they appeared to b that it was a real pleasure to observe them as they mingled and separated again onl to re-form in greater beauty. Smoke in the valleys.

June 11.—The barometer fell slightly early in the day, but after 9 a. m. graduall rose to 30.08 at last observation. Mean barometer, 30.040. The temperature rapidl increased to 48° at 4 a. m., where it remained stationary until midday, then decrease gradually to 39° at midnight. Mean thermometer, 44°.2. The hygrometer showed a great increase of moisture in the atmosphere. Changeable southwest wind until 9 a. m., when it gradually veered round to a steady wind from the northwest. The velocity increased to a heavy gale, (late in the afternoon,) which reached a maximum of fifty miles per hour at 5 p. m., and then diminished to a brisk wind at night. From 2 to 9 a. m. rain fell without interruption, and sometimes very heavily. Dense clouds covered the summit for the rest of the day.

June 12.—Steady barometer in the morning. After 6 a. m. the mercury rose rapidly and uninterruptedly to 30.31 at midnight. Mean barometer, 30.199. The temperatur decreased to 33° at 4 a. m., and then oscillated between 32° and 36°. Mean thermometer, 33°.5. Humidity averaged 80 per cent. Steady northwest wind changed to orth between 7 and 8 p. m. Fresh and brisk velocity prevailed. It fell to a gentle ind for an hour or two in the morning, and rose to a moderate gale at night. Light ain for half an hour about 2 a. m. From 6 a. m., and up to midday, the ravines were artially filled with heavy cumulus clouds, which moved in winding masses as the ormation of the mountain-sides dictated. From midday, and up to 6 p. m., the summit as capped, giving no opportunity for extensive observation. From 9 p. m. no clouds ere to be seen; the rapidity with which they disappeared was truly astonishing.

June 13.—The barometer rose very rapidly, and reached a maximum of 30.35 at 11 . m. After that hour the mercury fell steadily to 30.26 at midnight. Mean barome- er, 30.300. The temperature steadily increased to 45° at 2 p. m. Steady at 44° for hree hours after, and then decreased to 38° at night. Mean thermometer, 40°.0. reat decrease in the humidity to-day; minimum during the afternoon of 60 per cent. ariable northeast light wind, with numerous calms, until it settled to a fresh wind rom the west and northwest at night. The morning opened with a clear sky. Light tratus and cirrus passed over between 4 and 9 a. m., followed by about two-fourths umulus. After 5.30 p. m. the sky was free from cloud, with the exception of a very light fringe of stratus on the southeastern horizon. Fine, star-light night. From 9 o 10 p. m. an auroral arch appeared in the north; faint yellow color.

June 14.—After 7 a. m. the barometer gradually fell to 30.13 at last report. Mean arometer, 30.212. Temperature very steady at 36° until 7 a. m., when it gradually ncreased and fluctuated for the greater part of the day between 43° and 44°; de- eased to 38° at 9 p. m., and then the mercury rose to 41° at last observation. Mean hermometer, 39°.0. The humidity decreased very rapidly as the day wore on, and at p. m. reached a minimum of 17 per cent.; the smallest percentage that I have ever bserved on this station. Light wind from the west and northwest, but calms pre- ailed through the daylight hours. After sunset there was a light and fresh wind from he southeast. The day has been uniformly fair, and cumulus clouds formed in great ariety. In the latter part of the evening the upper clouds moved steadily from the est.

June 15.—The barometer fell steadily to 30.04 at midnight. Mean barometer, 30.083. fter 6 a. m. the temperature steadily increased to 52° at midday, and remained steady ntil 2.30 p. m., then decreased to 46° at 7 p. m., and did not change through the rest f the day. Mean thermometer, 46°.0. The humidity increased toward the close of he day from 90 to 100 per cent. Light southerly wind fell to a calm between 1 and 2 . m., which latter continued for several hours. Uncertain, gentle wind from the orthwest through the forenoon, became steady after midday, and freshened to high nd moderate gale velocity at night. Fair weather prevailed during the daylight ours, but as evening set in large masses of dense stratus covered and drifted over the ummit. The weather at night was very cloudy and threatening.

June 16.—The barometer rose after early morning to a maximum of 30.13 at 11 a. m. nd then steadily fell to 29.91 at the last observation. Mean barometer, 30.041. There as a steady increase of temperature up to 1 p. m., when the mercury stood at 56°, nd decreased through the rest of the day to 40° at midnight. Mean thermometer, 8°.7. Steady northwest wind all day. The velocity gradually diminished from a risk wind to a calm at noon. After 1 p. m. there sprang up a brisk wind, which in- reased to high and gale as night approached. Clearing weather set in shortly after a. m., and very fair weather prevailed until 6 p. m., when heavy clouds came down rom the northwest and soon enveloped the mountain. At the same time the humidity ensibly increased, and there was every indication of an approaching storm. The wind as very warm, and had settled to a steady blow averaging thirty-two miles an hour. heet and forked lightning flashed over and below the summit from 10.11 p. m. until fter midnight, with the usual accompaniment of heavy thunder, which continued olling, almost without intermission, during the progress of the storm. At 10.30 p. m. eavy rain set in, and did not cease until long after midnight. The upper clouds were early all large cumuli moving from the northwest. I visited stations Nos. 2 and 3 his a. m.; found all well and the work progressing favorably. Mr. Gates (district su- erintendent to the Western Union Telegraph Company) arrived at the base to-night ith a party of men to put up the mountain wire.

June 17.—Steady barometer in the morning. After 5 a. m. the mercury gradually ose to a maximum of 29.97 at 4 p. m. and fell slightly and unevenly after that hour. ean barometer, 29.909. There was a decrease in the temperature of 10° from 1 a. m. o midnight. Mean thermometer, 36°. The wind continues to come very steadily from he northwest, and with heavy gale velocity, which now and then drops to high wind. ain ended at 12.45 a. m. The weather was cloudy until after 7 a. m., when the clouds roke and fair weather set in for the rest of the day. During the forenoon large quan- ties of cumulus cloud filled the ravines to the west of the mountain, sometimes en- rely covering the summits in that direction, excepting that of La Fayette. These ouds passed away as the day wore on, leaving the upper sky perfectly clear. etween 6 and 7 p. m. we gradually became enveloped in dense stratus clouds, which ung over us for two or three hours, and then gradually dwindled to a few faint streaks at midnight. From 10 p. m. until midnight a diffused light appeared in th northern horizon; it was not very distinct in coloring.

June 18.—The barometer rose to a maximum of 30.06 at midday, stood steady for a hour, and then fell rapidly to 29.91 at midnight. Mean barometer, 29.999. The temperature decreased rapidly to 26° at 4 a. m., and remained steady at that point fo two hours. From 6 to 7 a. m. the temperature ran up 6°, (to 32°,) and gradually to 44 in the early part of the afternoon, remaining very steady afterward. Mean thermometer, 41°.0. There has been no change in the direction of the wind to-day. The velocity decreased to a fresh wind at 2 p. m., and then steadily increased to a gale c fifty miles per hour at midnight. From 5 a. m. the sky was partially covered with haze of well-defined cirrus clouds, which at 4.50 p. m. gave place to a veil of ligh stratus clouds. These last gradually descended and covered the summit. After 10.30 p m. the stars were visible through a few breaks in the clouds, and fair weather closed th day. During the latter part of the afternoon a very peculiar cloud was observed t the southeast of and a little above the mountain. It was of a light-brown color, (muc deeper than any other in sight at the time,) and in the shape of a depressed wash-bow or rather fruit-dish, the formation being very accurate. This cloud appeared to be quit stationary, while the others (cirrus) were moving rapidly before the northwest wind.

June 19.—The barometer fell to a minimum of 29.87 at 6 a. m., then rose steadily t 30.03 at 2 p. m., and fell to 29.88 at last observation. Mean barometer, 29.969. Th temperature increased from 42° in the early morning to 53° and 54° at night. Mea thermometer, 50°.2. After midday the mercury was pretty steady from 50° to 54° Steady northwest wind continued until between 6 and 7 p. m., when it backed to west and remained so for the rest of the day. Gale velocity gradually fell off to brisk an fresh wind through the middle of the day, and from 3 p. m. increased to forty-eigh miles per hour at midnight. The day opened with rain, which began at 12.40 a. m., an continued until 4.15 a. m., coming down very heavily at times. Cloudy weather prevailed until it ended in a shower of light rain, which took place between the hours o 2 and 3 p. m. After the shower the clouds rapidly passed away from the summit showing cumulus clouds below, and about one-fourth cirrus above it. In two or thre hours these cirri gave place to cumuli. Haze below; and as night wore on there appeared to be a blending of light stratus with the other clouds, and the sky was frequently veiled by them. Cloudy weather at midnight.

June 20.—The barometer low, and comparatively steady all day. Mean barometer 29.827. The temperature decreased to 45°, where it remained steady from 7 a. m. unti 1 p. m., and then rapidly increased to 49° at 4 p. m. After 5 p. m. the mercury wen down very rapidly to 34° at last observation. Mean thermometer, 43°. From 6 t 7 a. m. the temperature fell 5°; the same rapid decrease took place between 5 and p. m. The wind changed to northwest at 1.30 a. m., and remained steady there for th rest of the day. The wind rose to a storm of sixty miles per hour at 2 a. m., oscillate between "gale" and "brisk" through the day, and rose to a storm at night. Heav rain from 3.15 to 3.45 a. m. Cleared rapidly and fair weather prevailed until sunset when the summit was again covered with dense clouds. Two-fourths to three-fourth cumulus cloud moved with the prevailing wind, frequently capping the summit in it flight. I visited all stations to-day and found everything correct.

June 21.—The barometer oscillated considerably through the day, and rose to 30.0 at last observation. Mean barometer, 29.938. Temperature steady at 30° and 31° i the morning, rose to 36° in the middle of the day, and decreased to very steady thermometer of 32° at night. Mean thermometer, 32°.5. Steady northwest wind up t 3.20 p. m., when it changed to north and blew steadily from that point for the rest o the day. The wind increased in force to sixty-eight miles per hour at 4 a. m., an then rapidly diminished to fresh and brisk. About one-fourth stratus cloud appeare above the summit in the beginning of the day, which rapidly increased in volume an capped the mountain. Between 3 and 4 a. m. the clouds massed in the southeast, showing a clear starlit sky and brilliant moon. This lasted but a few minutes, as the summit was again covered with dense clouds. From 12.30 to 3.25 p. m. we experience light showers of rain, snow, and heavy sleet. Cloudy weather continued to the clos of the day. The wire has been working very hard for the past two days, and gav out entirely this afternoon.

June 22.—The barometer rose steadily all day to 30.27 at last observation. Mea barometer, 30.184. The temperature was very steady in the early morning at 32°, an from 4 a. m. fluctuated between 34° and 36°. Mean thermometer, 34.°2. Win changed to northwest late last night, and back to north at 3.30 a. m. Very uncertai direction through the day, west and nothwest being the prevalent winds up to 7.30 p m., when it died away to calm. Fresh wind from the northeast at night. Calm a midnight. Fresh and gentle velocity prevailed. The clouds lifted for a short perio in the early morning, but up to 7.30 p. m. cloudy weather prevailed. After that th sky cleared rapidly, and Portland, Me., could be easily seen with the naked eye, an the telescope brought the houses out very distinctly.

I made a visit to stations Nos. 2 and 3 to-day, and found the observers at their post and the business going on steadily.

An auroral arch appeared in the north from 10 p. m. until midnight, which extended from northeast to north, and rested upon a dark segment. I found a break in the “ground” and cable; made the necessary repairs.

June 23.—The barometer rose to 30.38 at 11 a. m., and then gradually fell to 30.36 at last observation. Mean barometer, 30.347. The temperature steadily increased to 47° at midday, fluctuated two or three degrees below that point during the afternoon, and settled to 44° at night. Mean thermometer, 43°.5. This has been a very calm day, only a few uncertain puffs from the east and southwest occurring to break the monotony of a dead calm. Fair weather all day. Upper clouds (cumuli) moved from the southwest in the latter part of the afternoon. A very small quantity of stratus appeared at irregular intervals through the day and night. Auroral streamers covered the sky to the north and east from 9.30 p. m. until 2.15 a. m. next morning, gradually diminishing in intensity as they passed from view.

June 24.—The barometer fell slightly in the early morning, and then steadily rose to 30.47 at night. Mean barometer, 30.409. The temperature decreased to 41° at 4 a. m., increased to 51° in the early afternoon, and decreased to 45° at night. Mean thermometer, 46°.7. Prevailing wind from points either side of east, and very frequent calms of long duration. The velocity through the day was gentle; fresh at night. Fair weather all day. The upper clouds moved from the west and northwest nearly all day. After 7 p. m. the night was clear, and between 9 and 10 p. m. a beautiful aurora appeared in the north and extended a considerable distance along the horizon. It was in the form of a lambent flame, which incessantly shot up streamers reaching to the zenith, instantly returning to the main aurora. This continued until after 3 a. m. next morning. I visited the stations to-day, from base to summit.

June 25.—The barometer continued rising to 30.58 at midday, and then gradually fell to 30.54 at last observation. Mean barometer, 30.554. The temperature increased rapidly through the forenoon. The thermometer was steady at 55° and 56° during the afternoon, and dropped to 48° at night. Mean thermometer, 51°.2. Steady northeast wind through the early part of the day; turned to southwest at 3.50 p. m., and immediately after to dead calm. Steady northwester at night. Gentle velocity prevailed nearly all day; brisk at night. Clear and fair weather prevailed all day. Principal upper clouds for the past two days, cumuli. Only a few stratus clouds appeared at long intervals. A bright lambent flame, smaller, but similar to that of last night, appeared in the north from 9.10 p. m. to 3.15 a. m.

June 26.—Up to midday the barometer was steady, and then fell rapidly to 30.36 at last observation. Mean barometer, 30.456. The temperature increased to 59° in the afternoon, and decreased to 49° at midnight. Mean thermometer, 53°.0. Wind steady from the northwest—due west for an hour or two before sundown. Fresh and gentle velocity increased to a high wind at night. Fair weather prevailed all day; clear at night. Principal clouds, cirrus, moving from the west and northwest. Well-defined cirro-stratus (about one-sixteenth) were observed in the morning, and did not altogether lose that character throughout the day. A great quantity of pure and almost transparent cirrus covered the sky. A soft haze covered the mountains and lower country. After 9 p. m., spasmodic auroral displays (“merry dancers”) took place near the northern horizon, and appeared at irregular intervals into the early part of the next morning. Visitors remark upon the scarcity of water in this section of the country. Trains cannot run from the summit, as the springs fail to afford sufficient water to supply the engines.

June 27.—The barometer fell rapidly all day to 30.08 at midnight. Mean barometer, 30.197. The temperature rapidly increased to 59° in the middle of the day, and gradually decreased to 51° at last observation. Mean thermometer, 53°.2. The relative humidity fell to 16 per cent. from 9 to 10 a. m., and increased to 86 at night. Northwest wind changed to west at 5.30 p. m., and continued so for the rest of the day. Calm from 9 to 10 a. m. High wind fell off to fresh and gentle, and increased at night to a moderate gale. Clear and fair weather prevailed. Cirro-stratus clouds predominated and remained stationary through the greater part of the day. As the wind from the west increased in force, the clouds were driven rapidly before it. Toward sundown only a few cumuli dotted the sky. Slight streaks of stratus (well defined) appeared late at night and gradually increased in volume. Haze and smoke covered the lower country.

June 28.—The barometer fell to 30.02 at 10 a. m., and then rose to 30.10 at last observation. The mercury rose and fell very unevenly. Mean barometer, 30.073. The temperature fluctuated between 51° and 53° until late in the afternoon, and, from 4 p. m., gradually decreased to 47° at night. Mean thermometer, 50°.7. The wind veered to northwest between 1 and 2 a. m., and prevailed from that point nearly all day. It moved around to west for an hour or two in the late forenoon, and to north at sundown. After 8.15 p. m. the wind suddenly died away and a calm ensued. High and brisk velocity prevailed; fresh in the forenoon. The day opened with cloudy weather; the summit covered with dense saturating clouds. The humidity rapidly increased to 100 per cent., and light rain fell from 5.30 to 11.45 a. m. Cloudy weather prevailed (with intervals of clearing) until after 9 p. m., when the sky rapidly cleared, and only very slight streaks of stratus cloud remained near the southeastern horizon. Vivid flashes of heat lightning were observed in the south a little before midnight, and a faint aurora appeared in the northeast from midnight until 2.20 a. m. The telegraph constructors are making extensive alterations in the wires, and interrupt operators considerably.

June 29.—After 1 a. m. the barometer fell to 30.06 at 4 a. m., then steadily rose to 30.16 at 11 a. m., and remained steady until 8 p. m. From that hour there was a gradual rise to 30.18 at last observation. Mean barometer, 30.153. The temperature increased to 58° at midday, and remained very steady until late in the afternoon, and decreased to 54° at 8 p. m. From that time the mercury was very steady; mean thermometer, 54°.2; calm until 5.10 a. m., when a variable light wind arose in the west. It died out at 8.20 a. m. Very light puffs from the west and northwest until late in the afternoon, when the velocity increased to "brisk," and changed direction to the south, settling to southwest after 9 p. m. Fair weather prevailed. Shortly before sundown heavy clouds massed on the summit, and for a couple of hours there was every indication of approaching rain. This passed off, and the night set in fair. Heavy cumulus clouds covered the greater portion of the sky after the early part of the forenoon. Haze and smoke prevailed below. Telegraphic communication is very uncertain.

June 30.—The barometer fluctuated between 30.15 and 30.19; mean barometer, 30.183. The temperature was comparatively steady; from 51° to 55°; mean thermometer, 53°.2. Wind oscillated between west and southwest through the early part of the day, and settled at the latter point after 10 a. m. The velocity steadily increased to a heavy gale of fifty miles per hour at midnight. The day opened with a clear atmosphere above the summit, and with the ravines filled with a large quantity of cumulus cloud. After 6 a. m. heavy saturating clouds covered the summit, culminating in light rain at 1 p. m. It held up between 5.30 and 9.20 p. m., then recommenced, and continued after the last observation was recorded, coming down very heavily at times.

INSTRUMENTS, PROPERTY, ETC.

No material change has taken place in the condition of the instruments and property at this station since last report, except the carpet, which is rapidly wearing out.

ALFRED R. THORNETT,
Observer Sergeant, Signal-Service, United States Army.

G.

Daily journal.

BASE OF MOUNT WASHINGTON, NEW HAMPSHIRE.

May 1, 1873.—This station bears due west of the summit. Regular observations commenced at 1 a. m. A few "stratus" clouds were observed at 1 a. m., which soon disappeared, leaving a perfectly clear sky. A light easterly wind prevailed throughout the night, the barometer remaining stationary until about 6 a. m., when it began to rise slowly. The temperature declined six degrees between 1 and 5 a. m., exhibiting a minimum of 30° at 5 a. m., and remaining at that height until 6 a. m., when it began to ascend. Wind veered to southwest at about 6.30 a. m. Fresh to brisk westerly winds during the day, with partly fair and cloudy weather. Maximum temperature, 53°. At 7 p. m. the wind changed to the south, and at 8 p. m. to the southeast, and continued "light" from that quarter during the night. The 10 a. m. signal for observations was not acknowledged by observer on summit.

May 2.—A gentle southeast wind prevailed at 1 a. m., changing to east, shortly after, and remaining in that direction until 7 a. m., when a calm ensued. Barometer steady during the night. The temperature remained at 35° between 1 a. m. and 5.30 a. m., reading 37° at 6 a. m. and 44° at 8 a. m. A few "stratus" clouds were observed in the southwestern horizon between 1 and 2 a. m., giving place to "cirri" moving slowly from west. No signals could be heard from summit between 1 and 4 a. m. A light westerly wind set in at 8 a. m., occasionally shifting to the south and eastward during the day. The sky clouded over with cirro-stratus, spreading into stratus during the forenoon, and light snow commenced at 2.45 p. m., the barometer falling steadily but slowly. The thermometer reached its maximum height at 10 a. m., when it read 30° and fell steadily thereafter. Snow turned to rain at 7 p. m., and the latter to sleet at 9.50 p. m., ending at 11 p. m. Total amount of melted snow, sleet, and rain, 0.49 inch. A very light wind prevailed during the night, shifting between southeast and southwest. No signals heard from summit at 8 p. m.

May 3.—Barometer continues to fall slowly and steadily. The thermometer reached its minimum at 6 a. m., reading 31°.5. Light southeast and southwest winds, with occasional calms, until morning. Dark, threatening stratus clouds were observed in the early morning, and light snow fell between 3.45 a. m. and 4.30 a. m.; the clouds still appearing very heavy and sinking lower down the mountains. Light snow recommenced at 7.40 a. m., a steady but very light westerly wind prevailing. The barometer continues to fall until noon, and rises steadily thereafter. Snow ended at 5.40 p. m., the weather soon after giving signs of clearing up. Light westerly winds prevailed until 7 p. m., when a fresh southeast wind set in which had backed to northeast by 9 p. m., but changed to the west again toward midnight, the weather clearing up finely with change of wind. No signals could be heard from the summit after 8 p m.

May 4.—Barometer continued to rise after midnight. The thermometer reached its minimum at 5 a. m., when it read 23°. A gentle westerly wind prevailed until 3.45 a. m., when the vane swung to the southeast, and to the north at 8 a. m. A few cirri were observed at 1 a. m., which soon disappeared to the southeast, leaving a clear sky. Clear weather continued until 2 p. m., when the sky became partly overcast with cumulus clouds moving from the northwest. A fresh northwest wind prevailed throughout the afternoon, which apparently blew with great force on the summit, as dense clouds of snow were at times observed. Maximum temperature, 48° at 3 p. m. Signals acknowledged regularly after 3 p. m. Barometer continued rising until 7 p. m., when it began to fall slowly; the thermometer rising 2° between 9 p. m. and midnight. A gentle north wind prevailed throughout the night, with fair weather until midnight, when the sky became entirely covered with stratus clouds.

May 5.—The barometer continued to fall slowly until 3 a. m., and remained stationary until 6 a. m., when it began to rise slowly. The fluctuation of the thermometer from 1 to 6 a. m. was very small, not exceeding 2°. At the last-named hour the mercury began to fall, reading 33°.5 at 8 a. m., which is the lowest observed during the morning. Light to fresh northwesterly winds prevailed during the night, followed by a dead calm at 7 a. m., which continued until 9 a. m., when a gentle northwest wind set in. Stratus clouds completely covered the sky during the night, which were observed to move from the northwest at 4 a. m., and at 5 a. m. were moving rapidly from the west, assuming a threatening appearance. Light snow commenced at 6.15 a. m., soon increasing to "heavy snow," and ending at 8.45 a. m., at which time a dense fog set in. Weather remained foggy and misting until 10.45 a. m., when snow began to fall again; the latter at times becoming rain or sleet. At 12 m. the weather showed signs of clearing up, which were verified during the afternoon, the stratus clouds breaking up and assuming the shape of cumuli, moving rapidly from the northwest. A fresh northwest wind prevailed throughout the afternoon, and the barometer continued to rise steadily. All signals were promptly acknowledged by the summit, the line working very well to-day. Clear weather, rising barometer, and light northerly wind at night. Signals not acknowledged by summit at 11.22 p. m.

May 6.—Clear weather and steadily rising barometer between midnight and 9 a. m. The thermometer fell at the rate of 1° per hour until 5 a. m., when it reached a minimum of 23°. Gentle northerly winds prevailed, veering more easterly at 8 a. m. Continued clear weather and fresh west to northwest wind during the afternoon. At 8 p. m. the wind changed to southeast, and remained in that direction up to 12 m. Maximum temperature of day, 45°. Clear weather and rising barometer throughout.

May 7.—Barometer still rising. Clear sky until 5 a. m., when a few cirri were observed on the western horizon. A gentle southeast wind prevailed until 4 a. m., when it changed to the east and to the northwest at 7.30 a. m. Minimum temperature 28° at 4 a. m. Very pleasant weather during the afternoon, with light and variable wind. A few cirri observed on western horizon, moving from the northwest; elsewhere the sky was clear. Maximum temperature 54° at 3 p. m. Barometer remained nearly stationary throughout the night. A gentle north wind prevailing, with generally clear sky.

May 8.—The barometer rose slowly and evenly during the night. The temperature advanced 2° between midnight and 3 a. m., and fell off until 6 a. m., reaching a minimum of 32°.5. A gentle north wind prevailed during the night, with clear sky, until 3 a. m., when the lower atmosphere grew hazy and cirrus clouds began to appear, moving rapidly from the west.

4 *p. m.*—The barometer continued rising until 9 a. m., and has been falling slowly since that hour. The thermometer exhibited a maximum of 58° at 3 p. m. Sky three-fourths covered with cirrus and cirro-stratus clouds moving from the northwest. A gentle westerly wind prevailed until 2 p. m., when a fresh and steady southeast wind set in. Lower atmosphere "hazy."

12 *p. m.*—Wind continued gentle from the southeast, with partly fair and clear weather during the past eight hours. The barometer was nearly stationary until 11.22 p. m., when it began to fall steadily. All signals promptly acknowledged from summit.

May 9, 8 *a. m.*—The thermometer reached its minimum of 33° as early as 1 a. m., and began to rise shortly thereafter, going up to 41° by 5 a. m. The barometer fell slowly and regularly. A gentle southeast wind prevailed until 4.30 a. m., when it shifted to the northeast, veering back to southeast at 7 a. m. A few "cirri" could be seen only until after 3 a. m., when the sky clouded over with stratus, which soon enveloped the entire heavens.

4 *p. m.*—Cloudy weather and fresh southeast wind; the latter shifting to westerly at 11 a. m., but backing to southeast by 1 p. m. Maximum temperature 51° at 1 p. m Barometer falling slowly.

12 *p. m.*—Light rain commenced at 6.10 p. m., the wind at the same time increasing to brisk, blowing in gusts of considerable force, and varying between southeast and east The barometer fell .068 inch between 4.57 p. m. and midnight. Rain ceased at 11.30 p. m.; amount, 0.11 inch. Weather threatening, and wind blowing strong gusts.

May 10, 8 a. *m.*—The barometer has continued to fall during the past eight hours with continued strong gusts of wind from the east and southeast. Rain recommenced at 1.30 a. m., and continued throughout, perfect sheets of it coming down the mountains. Rain-fall, .29 inch.

4 *p. m.*—The minute observations taken between 8 and 9 a. m. disclosed extraordinary fluctuations of the barometer, the mercury alternately rising and falling from .010 to .018 inch in the space of one minute. These fluctuations appeared to be in direct proportion to the force of the strong gusts of wind which followed each other in rapid succession. Rain ceased at 10.05 a. m., and the wind moderated soon thereafter but the weather continued cloudy and threatening until 4 p. m., when the lower clouds began to break up, giving view to cirri and cirro-cumuli moving slowly from the southwest. The wind veered to the south at 2 p. m., and to the west between the hours of 3 and 4 p. m. Maximum thermometer, 58° at 1 p. m. The anemometer record was lost between 2.30 and 6 p. m., the insulating attachment being out of order.

12 *p. m.*—Partly clear and cloudy weather kuring the past eight hours, with steady barometer. Wind shifted to the southeast at 6.30 p. m., blowing gently and steadily from that point throughout.

May 11, 8 *a. m.*—The barometer has been falling slowly since midnight, with very little change of temperature until after 3 a. m., when the thermometer began to rise Minimum temperature, 37°. A gentle southeast wind prevailed until after 5 a. m. when it shifted to the west, and died off soon after. A few "cirri," were observed in the southern horizon between 1 and 4 a. m., which were followed by stratus rising over the mountains on the southeast, and covering the entire sky by 7 a. m.

4 *p. m.*—Variable light airs and calms until 10 a. m., when a fresh southeast wind set in, which shifted to the northwest at 3.30 p. m. Weather became threatening toward noon, and rain began to fall at 2.20 p. m. The barometer fell slowly throughout, and the minute observations made between 2 and 3 p. m. showed considerable fluctuations of the mercury, especially during the ten minutes preceding the beginning of rain. Maximum temperature 59° at 2 p. m.

12 *p. m.*—Rain continued throughout the night. Total rain-fall during twenty-four hours 0.97 inch. The barometer fell .100 between 4.57 p. m. and midnight, while the temperature has changed but little in the past eight hours. A light southeast wind prevailed until about 8 p. m., when a calm ensued. Between 9 and 10 p. m. a light northerly wind sprang up, which continued up to midnight.

May 12, 8 *a. m.*—The barometer fell slowly until 6 a. m., when the pressure increased slightly. The thermometer fell 1° from midnight to 2 a. m., reading 39° at the latter hour, which is the minimum during the morning. Continuous rain throughout. A gentle north wind prevailed until 6.15 a. m., at which time the wind died out completely.

4 *p. m.*—Rain ceased at 10.45 a. m., and the clouds began to break up toward noon Partly fair and cloudy weather during the afternoon. The barometer has been steady with a slight tendency to rise. Maximum temperature 50° at 3 p. m. Light and fresh variable northerly winds have prevailed during the past eight hours, but the clouds moved steadily from the northwest.

12 *p. m.*—Barometer has risen very slowly and the weather cleared up gradually Gentle northerly to westerly winds continued until 11 p. m., veering to easterly at that hour. Barometer falling at midnight.

May 13, 8 *a. m.*—Barometer has fallen steadily since midnight. Minimum temperature 34° at 2 a. m. No clouds were visible until 6 a. m., when a dense bank of stratus was observed rising in the southern horizon, which increased rapidly and soon covered the entire sky. Variable easterly winds throughout, veering more southerly toward 8 a. m

4 *p. m.*—The barometer fell quite rapidly until 3.25 p. m., when simultaneously with a change of wind from southeast to northwest, it began to rise. Light rain began at 10.25 a. m., and continued at intervals. The wind, until 3.25 p. m., was from the southeast, but the lower clouds moved steadily from the southwest, and later from the west Maximum temperature 52° at 1 p. m.

12 *p. m.*—Partly fair and cloudy weather, with fresh northwest wind. Barometer rising slowly.

May 14, 8 *a. m.*—The barometer has risen slowly during the past eight hours, with cold and cloudy weather. Light snow between 4.50 and 7.15 a. m. Minimum temperature 30° between 3 and 6 a. m. A fresh northwest to southwest wind prevailed throughout.

4 *p. m.*—The barometer has been falling very slightly since 8 a. m. and the thermometer has changed but little. Maximum temperature, 34° at 12 m. The weather has continued cloudy, with light snow at short intervals. Sleet fell between 11.25 and 11.50 a. m. Fresh westerly wind prevails.

12 *p. m.*—Snow fell until 8.40 p. m. Cold and cloudy weather continued. Barometer still falling slowly. Fresh westerly winds throughout. Amount of melted snow .04 inch.

May 15, 8 *a. m.*—The barometer changed but little until after 4 a. m., when it began to rise slowly and more rapidly after 6 a. m. The thermometer fell from 28° at 1 a. m. to a minimum of 26° at 2 a. m., keeping at that height until after 6 a. m. when it began to rise slowly. Fresh and brisk northwest to north winds throughout with cloudy weather. A light mist commenced at 6.45 a. m., turning into light snow.

4 *p. m.*—Snow ended at 11.30 a. m., but the weather continued cloudy and threatening, with "gentle to fresh" northwest wind. Maximum temperature, 41° at 2 p. m. Barometer rising.

12 *p. m.*—The weather gave signs of clearing up after 9 p. m., and all clouds but a few cirri had disappeared at 11 p. m. Light westerly winds veered to the north at 9. p. m. The barometer continued to rise until 8 p. m., and remained nearly stationary after that hour.

May 16, 8 *a. m.*—The sky became overcast soon after midnight, and remained so throughout. The thermometer reached a minimum of 32° at midnight. and rose 2° by 2 a. m., remaining at 34° until 6 a. m. Light northerly winds throughout. The barometer has been very steady during the past eight hours.

4 *p. m.*—The barometer has continued very steady. Light rain commenced at 11.10 a. m., and continued until 12.40 p. m., the weather remaining cloudy. Gentle northwest to westerly winds throughout. Maximum temperature, 48° at 2 p. m.

12 *p. m.*—Continued cloudy weather and light north and northwest wind. The barometer has risen slightly.

May 17, 8 *a. m.*—Light rain between 2.50 and 4.10 a. m. Weather still cloudy, barometer steady. A light north wind prevailed until 2.15 a. m., followed by a calm which lasted until 4.10 a. m., when a gentle westerly wind sprung up. Maximum temperature 35°.5 at 6 a. m.

4 *p. m.*—The barometer has risen slowly during the past eight hours. Cloudy weather continues, with light squalls of rain and sleet. The wind veered to the northeast at 3 p. m. The maximum temperature, 45° at 1 p. m.

12 *p. m.*—Sleet and rain until 9.40 p. m., with light winds, the latter backing to northerly at 9 p. m., and to northeast at 11 p. m. Barometer rising until 9 p. m., when it fell slowly until 10 p. m. and remained stationary up to midnight. Total amount of melted snow and rain, 0.13 inch.

May 18, 8 *a. m.*—The barometer fell steadily until 4 a. m., and began to rise slowly after 5 a. m. The thermometer stood at 35° until after 4 a. m., when it fell slightly up to 7 a. m., reaching a minimum of 33°.5. Light rain commenced at 1.45 a. m., turning into heavy snow at 4.40 a. m., which ceased at 5.30 a. m., but recommenced at 6.15 a. m. Variable light winds and calms throughout.

4 *p. m.*—Frequent short squalls of sleet between 11 a. m. and 2 p. m., with light to fresh northwesterly winds throughout. Barometer rising slowly. Weather gives promise of clearing up. Maximum temperature, 45° at 3 p. m.

12 *p. m.*—The barometer has risen steadily during the past eight hours, and the weather cleared up finely. Fresh northwest winds until 8 p. m., when it veered to the north. The thermometer fell to 30° at 11 p. m., which is the minimum of the day; a few clouds appearing at midnight. Amount of melted snow and sleet, .36 inch.

May 19, 8 *a. m.*—The barometer fell uninterruptedly between midnight and 5 a. m., and is now rising slowly. The temperature has been steadily increasing since midnight, reading 31° at that hour, 33° at 3 a. m., 37° at 6 a. m., and 41° at 8 a. m. The sky became overcast soon after midnight with stratus clouds, which now appear to be breaking up. A light northerly wind prevailed, veering to the northwest at 7 a. m.

4 *p. m.*—The barometer has been rising steadily since 8 a. m.; maximum temperature, 49°, at 3 p. m. The weather has partly cleared up, the clouds having a greater elevation and being broken up into large cumulo-stratus and cumulus clouds. A fresh northwest wind prevailed, veering to the north between 3 and 4 p. m.

12 *p. m.*—The weather cleared up entirely by 8 p. m., and remained clear throughout the night. The wind veered to the northeast soon after 4 p. m., blowing gently and steadily from that quarter during the past eight hours. The barometer has risen

steadily. The temperature declined until 10 p. m., and remained stationary betwee that hour and midnight.

May 20, 8 *a. m.*—The barometer remained nearly stationary until after 3 a. m., sinc which time it has been rising steadily. The thermometer stood at 31° between midnight and 3 a. m., fell to a minimum of 30° at 4 a. m., and began to rise between 5 an 6 a. m. The weather has continued clear with light winds, the latter having veered t the east at 1 a. m., backed to the north at 4 a. m., and to the northwest at 8 a. m.

4 *p. m.*—The barometer continued to rise until 10 a. m., remained stationary unti about 2 p. m., and has since been falling slowly. Maximum temperature, 58°. The sk was perfectly clear until after 12 m., when a few cumuli made their appearance in th southwestern horizon. Variable light airs until noon, when a steady gentle breeze se in from the northeast, which continued until after 3 p. m., shifting to a fresh westerl wind at that time.

12 *p. m.*—The barometer rose steadily between 4 and 10 p. m., and remained abou stationary during the last two hours. The thermometer fell very regularly from 57° a 4 p. m. to 36° at midnight. The weather cleared up again completely by 9 p. m. an remained so throughout the night. A steady gentle southeast wind prevailed betwee 6 p. m. and midnight.

May 21, 8 *a. m.*—Clear weather and gentle to fresh easterly winds throughout. Barometer very steady until after 6 a. m., when it commenced to rise. The thermomete changed but little between midnight and 6 a. m. A minimum of 34° was reached a 3 a. m.

4 *p. m.*—The barometer has been falling steadily since 8 a. m., and the sky has gradually clouded over with "cirri" moving from the southwest and spreading into stratu toward evening. The thermometer rose rapidly during the forenoon, reaching a maximum of 59° at 2 p. m. A faintly colored halo was observed between 11 a. m. and noon Fresh but very variable winds throughout.

12 *p. m.*—Sky assumed a threatening appearance after night-fall, and rain commence to fall at 11.50 p. m. Barometer falling. Variable westerly winds until 9 p. m., whe a gentle northeast wind set in.

May 22, 8 *a. m.*—Rain ended at 4.30 a. m., but the weather continues threatening Light northerly winds during the night, backing to westerly at 5 a. m. The thermometer stood lowest at 1 a. m., reading 40°; rose to 44° at 5 a. m., and fell off again to 41 at 6 a. m. Barometer falling slowly.

4 *p. m.*—Continued cloudy weather, variable light airs and calms. Barometer falling slowly. Maximum temperature, 53° from 1 to 2 p. m.

12 *p. m.*—A very steady and light southeast wind set in after 4 p. m., which continue throughout the night. Weather cloudy and barometer falling. The thermometer fell to 46° at 6 p. m., and remained near that height throughout the night.

May 23, 8 *a. m.*—Continued cloudy weather, falling barometer, and gentle southeas wind. Temperature fluctuating between 45° and 46° until after 6 a. m., when it bega to rise steadily.

4 *p. m.*—Weather still cloudy and barometer falling. The thermometer rose rapidly, reaching a maximum of 64° at 2 p. m. Wind very variable, but chiefly southerly, with a "light to fresh" velocity.

12 *p. m.*—Southerly winds continued until after 7 p. m., when a steady north wind se in, which held on through the night. Weather partly fair and cloudy, the clouds moving with great velocity from a southerly point. The thermometer fell to 54° at 8 p. m., remaining near that point during the rest of the night. Barometer falling.

May 24. 8 *a. m.*—Partly fair and cloudy weather during the past eight hours, with light to fresh winds, the latter shifting to southeast at 4 a. m. Barometer falling steadily. The thermometer fluctuated between 49° and 50° until 6 a. m., when i reached a minimum of 48°, and began to rise soon after.

4 *p. m.*—Wind shifted to the westward after 8 a. m., and increased to very fresh. Fair weather until noon, when the sky clouded over, and heavy rain fell between 1.2 p. m. and 1.50 p. m.; after 3 p. m. the weather cleared up partly. The atmosphere appears to be charged with an unusual amount of electricity, as the telegraph-wire is much affected by it. Barometer falling throughout. The thermometer rose rapidly during the forenoon, reaching a maximum of 69° at 12 a. m. After rain ceased it fell off to 53° at 3 p. m., and has now risen to 63°. Rain-fall, 0.11 inch.

12 *p. m.*—Cloudy and threatening weather, with fresh northwest wind. The thermometer fell to 51° at 11.22 p. m. The barometer has risen since 4 p. m.

May 25, 8 *a. m.*—Light rain commenced at 12.45 a. m., and continued until 7.40 a. m. Rain-fall, .17. The thermometer reached a minimum of 46° at 6 a. m. Barometer rising. Fresh northwesterly winds throughout. The weather appears to clear up after the rain ceased.

4 *p. m.*—Fair weather, rising barometer, and gentle northwest wind. Maximum temperature, 67° from 2 to 3 p. m.

12 *p. m.*—The barometer has risen steadily during the past eight hours, and thermometer fell rapidly until 11 p. m., reading 43° at that time, which is the minimum of the

day. Fair weather and gentle northwest wind until 6 p. m. Clear sky and light north wind thereafter.

May 26, 8 *a. m.*—Clear sky until after 6 a. m., when a few cirri and cirro-cumuli appeared in the western horizon, which are gradually increasing. The barometer has continued to rise, and the thermometer stood at 43° between midnight and 5 a. m., and began to rise rapidly after 6 a. m. Gentle to fresh north wind throughout.

4 *p. m.*—The barometer has been falling slowly since 8 a. m., with increasing cloudiness and hazy sky. The thermometer reached a maximum of 72° at 12 m., and remained high (71° to 70°) until 4 p. m. Gentle west and northwest winds throughout.

12 *p. m.*—Wind backed to the southeast at 7 p. m. Weather cloudy, and barometer falling.

May 27, 8 *a. m.*—Gentle southeast wind during the early morning, veering to the east at 6.30 a. m. Barometer falling. The thermometer fluctuated between 50° and 51° between midnight and 6 a. m., rising to 56° at 7 a. m. Weather cloudy.

4 *p. m.*—Partly fair and cloudy weather during the past eight hours, with light southerly winds. Thermometer, 74° at 1 p. m. Barometer falling steadily.

12 *p. m.*—A steady southeast wind set in at 8 p. m. Weather fair and barometer falling.

May 28, 8 *a. m.*—Gentle southeast wind continued during the night and veered to the westward at 7.30 a. m. Sky partly overcast with cirrus and stratus clouds moving from the west. Minimum temperature, 51°.5 at 5 a. m. Barometer falling.

4 *p. m.*—Cloudy weather and fresh westerly winds. Light rain-shower between 10.15 and 11.30 a. m. Barometer continues to fall. Maximum temperature, 70°.

12 *p. m.*—The barometer commenced to rise after 4 p. m., and a fresh northwest wind prevailed during the past eight hours. The weather cleared up between 9 and 11 p. m., but became overcast again toward midnight. Thermometer fell to 57°.

May 29, 8 *a. m.*—Light and variable westerly winds since midnight; sky covered with low stratus clouds. Barometer rising steadily. Minimum temperature, 51° at 5 a. m.

4 *p. m.*—The weather cleared up during the forenoon, and continues "fair." The barometer changed but little after 9 a. m. Maximum temperature, 68° at 2 p. m. Fresh "westerly" winds throughout. Sergeants Lloyd and Sackett relieved from duty as assistants by Privates Seely and Smith.

12 *p. m.*—The barometer began to fall after 5 p. m., and fell steadily up to midnight. Temperature declined to 51° at 9 p. m., remained at that point until 11 p. m., and rose to 54° at midnight. Fresh northerly to westerly winds until 8 p. m., and light easterly wind thereafter. Sky overcast after 9 p. m.

May 30, 8 *a. m.*—Barometer remained about stationary between midnight and 5 a. m., and has risen steadily since the latter hour. The thermometer fell throughout the night, reaching a minimum of 37° at 6 a. m. Wind very variable. A dense fog set in at 4 a. m., which was succeeded by sleet at 7.30 a. m.

4 *p. m.*—Sleet ended at 8.20 a. m., and the weather began to clear up. Fresh but variable northerly winds throughout. Maximum temperature, 50°. Barometer rising steadily.

12 *p. m.*—Partly fair and cloudy weather during past eight hours, with nearly clear sky at midnight. The barometer has continued to rise steadily. The thermometer fell to 2°.5 at midnight, which is the minimum of the day. Wind from all points of the compass, with a "gentle to fresh" velocity.

May 31, 8 *a. m.*—Cold and cloudy during the early morning, the thermometer falling to 29° at 4 a. m. Light and variable winds throughout. Weather clearing up after 5 . m. Barometer still rising steadily.

12 *p. m.*—Clear and pleasant weather throughout the day, with fresh westerly winds during the afternoon, and easterly winds at night. Barometer high and steady. Maximum temperature, 56° at 3 p. m. The instruments have remained in excellent condition throughout the month of May, and all observations were made at the proper hours.

Journal for the month of June.

June 1, 1873.—Commenced with clear sky and gentle easterly winds. Barometer high and steady. Thermometer fluctuating between 39° and 40° until after 5 a. m. During the forenoon the sky became gradually overcast with cirri moving from the northwest, and the barometer began to fall. Wind changed to the northwest at 8 a. m., increasing to fresh and brisk. At 1 p. m. the sky was completely overcast with cirro-stratus clouds and the weather assumed a threatening appearance, but cleared up partly toward evening, and the wind diminished in force. Maximum temperature, 6°. Barometer rising slightly toward midnight. Auroral display from 10.30 to 11.30 . m., consisting of several streamers of a uniform bluish color, apparently radiating from a common center below the northern horizon and extending half way to the zenith. The telegraph instrument was constantly at work during the display.

June 2.—Day opened with fair weather and light northerly wind. Barometer rising

Temperature falling from 54° at midnight to 37° at 5 a. m. Wind changed to the we and northwest between 9 and 10 a. m., increasing to fresh and brisk. Partly fair an clear weather during the afternoon; lower atmosphere, smoky. Barometer about st tionary. Maximum temperature, 58° at 3 p. m. Variable light airs and calms durin the night, weather fair, sky partly covered with fine cirri moving very slowly from th north, and giving rise to a faint halo at 9 p. m. Temperature falling to 40° at 10 p. and remaining about constant after that hour.

June 3.—Very hazy sky throughout the day. Upper clouds a continuous sheet of fin cirro-stratus, subsiding into stratus toward midnight. A well-defined, brightly-colore halo was visible at 1 p. m., forming one complete circle around the sun. At 3 p. m. th western half of the halo was still visible, and did not entirely disappear until afte 5 p. m. Barometer rising until 7 a. m., and falling steadily thereafter. Tempe ature very low in the morning; minimum, 37°, rising to 59° during the afternoon, an remaining steady at 44° during the night. Gentle northeast wind between midnigh and 8 a. m., followed by fresh westerly winds until 6 p. m., when a calm ensued. light south wind set in at 9 p. m.

June 4.—Commenced with threatening weather, and light southerly wind. Barom ter falling steadily. Thermometer steady. Light rain commenced at 2.30 a. m., an continued until 10.30 a. m. The wind changed to the northeast at 8 a. m. and th clouds descended lower down the mountains. Weather cleared up somewhat after rai ceased and the temperature rose rapidly, reaching a maximum of 66°. Baromete falling quite rapidly during the afternoon. Wind light and variable with frequen calms. Rain recommenced at 6 p. m., and continued throughout the night. The lin works so badly that the signals could not be regularly acknowledged by stations and 2.

June 5.—Rain ended at 5.20 a. m., but the weather continued cloudy and threatenin until evening, the clouds being very low during the forenoon, enveloping all the moun tains. Wind light and variable, from all points of the compass. Thunder-storm wit heavy rain between 3.10 p. m. and 3.45 p. m. Barometer rising slowly. Temperatur comparatively high during the afternoon, (64°–66°,) but falling to 47° at midnight.

June 6.—Day opened cold and cloudy. Thermometer 44° to 46°. Wind "easterly, light. Barometer rising slowly during the forenoon. Light rain-showers in the afte noon, with some lightning. Variable westerly to northerly winds, with frequen calms after 9 a. m. Barometer nearly stationary during the afternoon and risin toward night. Maximum temperature, 65°. Quite a heavy rain-shower advance rapidly from the westward, reaching the base at 1.15 p. m., and ascending Moun Washington. The observers on stations 1 and 2 report "heavy hail" at that time.

June 7.—Commenced "cold and cloudy," with light easterly winds and calms. Win changed westerly at 7 a. m., and continued from that direction with gentle to fres velocity until 8 p. m., when it backed to the east. Barometer rising throughout The thermometer stood lowest at 3 a. m., (44°,) reached a maximum of 56° at 11 a. m. and fell to 48° at 8 p. m., remaining steady during rest of night. Cloudy weathe during the forenoon. Numerous rain-showers during the afternoon and night; rai ceased at 11 p. m.

June 8.—Weather continued cloudy during the night, with fresh easterly winds Thermometer steady at 48°. Barometer rising. Toward morning the clouds began t break up, and the wind shifted to the westward, being very variable, but the cloud continued to move from the east and northeast. Barometer rising until noon, and re maining about stationary thereafter. Thermometer steady at 62° during the afternoon at 8 p. m. the last remnant of cloud had disappeared, and the sky was perfectly clea during the rest of the night. A gentle east wind prevailed during the night.

June 9.—Day opened clear and cool, with gentle easterly wind. Light fog at day break. Barometer steady. Weather continued clear until noon, when the sky becam partly overcast with cumulus clouds, which disappeared again at 6 p. m., leaving a clea sky. Temperature high during the afternoon. Variable northerly winds during the da and night. Barometer falling steadily after 6 a. m.

June 10.—Fair weather, with light and fresh northerly to westerly winds, throughout the day; sky "hazy." Barometer falling steadily. Thermometer steady fro midnight to 6 a. m., and rising rapidly thereafter, exhibiting a maximum of 74°.5 at p. m.; at 9 p. m. the wind changed to the south, and the temperature, which had declined rapidly between 7 and 8 p. m., rose 3°, and remained steady at 62° during the rest of the night. The sky clouded over with stratus clouds toward midnight.

June 11.—Day opened with threatening weather, and light southerly to easterl winds. Barometer falling. Temperature high and steady. Rain commenced at 3.5 a. m., and continued until 7.40 a. m. The wind changed to the northwest shortly before the rain ceased, and the barometer began to rise after 8 a. m. Cloudy weather with fresh northwest wind and rising barometer, during the remainder of the day.

June 12.—Partly fair and cloudy weather during the day, with variable light wind and calms. Temperature low. Barometer rising throughout. At 9 p. m. no cloud were to be seen, and the weather continued clear up to midnight.

June 13.—Day opened fair and cold. Thermometer stationary at 39°. Barometer high and steady. The light north wind which prevailed at midnight died off at 12.15 a. m., and a "dead calm" continued until 4.15 a. m., when a light easterly wind set in, which changed to the westward toward noon, the barometer falling slightly during the forenoon, and temperature increasing rapidly. Partly fair and clear weather during the afternoon and night, with fresh westerly wind, the latter backing to southerly at 7 p. m.

June 14.—Partly fair and clear weather and slowly falling barometer throughout. Variable light and fresh winds, chiefly westerly until 7 p. m., when a calm ensued, which was followed by light airs from the northward at 11 p. m. Sky partly covered with cirri moving from the northwest. The thermometer fell from 48° at 1 a. m. to 43° at 4 a. m., reached a maximum of 64° at 1 p. m., and declined rapidly after sundown, reading 43° at midnight. The 5 a. m. observation was lost by Assistant Observer J. H. Smith, who fell asleep before the time of taking the observation.

June 15.—Partly fair and cloudy weather, with gentle northerly to westerly winds. Barometer falling.

June 16.—Day opened "cloudy," with light airs from the north, and calms. Barometer steady. The barometer rose 3° from midnight to 1 a. m., and remained stationary at 57° until 5 a. m. Weather cleared up partly after 6 a. m.; and a heavy "haze" prevailed during the fore and afternoon. Temperature very high, ranging from 72° to 75°, a fresh northwest wind prevailing at the time. The barometer remained steady until after 2 p. m., when it began to fall. At 9 p. m. silent lightning was observed in the northwest horizon, followed by quite a severe thunder-storm. Rain commenced at 10.25 p. m., and continued up to midnight.

June 17.—Rain ceased at 1.15 a. m., but the weather continued threatening during the morning, with fresh northwest wind. Barometer fell considerably between midnight and 2 a. m., and began to rise at 3 a. m. Thermometer steady, changing only 2° during the night. At 9 a. m. the weather began to clear up, and by 3 p. m. the sky was perfectly clear. Rising barometer and fresh westerly to northerly winds throughout. The temperature increased very slightly during the afternoon, and fell off rapidly after sunset, reading 43° at midnight.

June 18.—Day commenced clear and cold, with a gentle breeze from the north. Barometer rising slowly. During the forenoon the sky became gradually overcast with "cirri," moving from the northwest, and the barometer began to fall. Fresh westerly winds during the day, veering more southerly at 7 p. m. Barometer still falling at night, and the weather becoming threatening.

June 19.—Light rain between 2.15 a. m. and 4.15 a. m., the barometer falling until 3 a. m. and rising slowly thereafter. Cloudy and very hazy weather during the forenoon, with rapidly-rising temperature and fresh northwest wind. Rain recommenced at 2.25 p. m. and continued until 3.30 p. m.; the barometer rose rapidly between 2 and 3 p. m., but fell steadily after 3 p. m.

The weather cleared up after rain ceased, and the wind changed to the northeast, being very variable after 6 p. m. The thermometer, which at noon read 74°, fell to 64° at 3 p. m., rose to 70° at 6 p. m., and fluctuated between 66° and 70° during the remainder of the night.

June 20.—The barometer fluctuated greatly between midnight and 4 a. m., remained nearly stationary between 5 a. m. and 3 p. m., and rose steadily during the remainder of the day. Heavy rain between 2.50 and 3.30 a. m., the temperature being exceptionally high until after the commencement of rain. Fresh westerly winds prevailed at midnight, easterly at 4 a. m., and dying off at 7 a. m., being followed by a fresh northwest wind, which increased to a brisk velocity toward noon, and moderated toward night. Generally fair weather after 5 a. m. Sky partly covered with cumulus and stratus clouds, moving with great velocity from the northwest. The temperature declined rapidly after 7 p. m., reading 48° at midnight. Aurora appeared at 11.05 p. m. in the form of a band of light, extending in a northwest and southeast direction, from a point about 10° above the northwest horizon to some 5° past the zenith, the thickest part near the horizon. Brilliant on first appearance, but rapidly faded away from the zenith downward, and disappeared at 11.16 p. m. In general appearance it resembled the tail of a comet.

June 21.—Day opened cold and fair; calm until 4 a. m., when a light northwest wind set in, which continued throughout, increasing to very fresh during the forenoon, and diminishing in force at night. Barometer fluctuating until noon, and rising steadily thereafter. The sky became overcast at 10 a. m., and a heavy shower of hail, followed by rain, fell between 12.20 p. m. and 2.30 p. m. Cold and cloudy weather during the afternoon and evening, the clouds began to break up after 9 p. m., and the weather promised fair up to midnight. The temperature fluctuated considerably during the twenty-four hours, being 45° at 1 a. m., 43° at 6 a. m., 57° at 12 m., 47° at 1 p. m., 51° at 4 p. m., and 39° at midnight. The cable worked so poorly after 8 a. m. that the signals could not be properly acknowledged.

June 22.—Day opened with fair weather and light north wind. Temperature 36° to 38°. Sky clouding up after 7 a. m., and weather continues cold and cloudy throughout the day, with light and variable winds. Toward night a steady northeast wind set in, and the weather cleared up completely by 9 p. m. Barometer rising steadily throughout.

June 23.—Clear weather, with gentle north to northeast wind from midnight to 8 m.; thermometer steady at 40° during the early morning. At 9 a. m. the wind change to west, and the sky commenced clouding up with cumulus and stratus clouds, movin from the southeast. Cloudy weather with gentle westerly wind during the afternoo Thermometer, 60° to 68°. At 6 p. m. the wind hauled southerly, and the clouds bega to break up. No clouds visible after 9 p. m. The barometer rose steadily until noo and remained about stationary thereafter.

June 24.—Day opened clear and pleasant with gentle southeasterly wind. Durin the forenoon the weather became cloudy, and wind changed to north and west; clea ing up toward evening, wind backing to southeast. Clear sky after 9 p. m. Barome ter rising throughout. Temperature high.

June 25.—Partly fair and clear weather, with very high barometer and high temper ature. Wind variable from all points of the compass, but clouds moving steadily fro eastward. Barometer steady.

June 26.—Continued fair and warm weather. Sky partly covered with cirri an haze. Barometer falling steadily after 10 a. m. Light southeast wind during the earl morning, light to fresh westerly winds during the day, and gentle northerly winds a night. Maximum temperature, 78°. At 10.56 p. m. a brilliant aurora made its appearance in the form of five distinct parallel bands of light, extending from the northwes horizon to some 10° past the zenith. These bands shot up in waves, alternately approaching and receding, and gradually lengthening until they reached the southeas horizon. At 11.08 it began to fade away until almost invisible, but at 11.12 suddenl increased in brilliancy, covering the sky from northwest to east 15° north with wave of light extending past the zenith. This continued until 11.25; from that time th aurora slowly faded away, until it disappeared at 11.55 p. m.

NOTE.—During the presence of the aurora, particularly during the time of its greatest brilliancy, the telegraph-wire was strongly charged with electricity, the instrumen working the same as during the thunder-storm.

June 27.—Day opened clear and pleasant, with gentle northeast wind. At 5 a. m the sky became partly covered with cirri, and the lower atmosphere grew hazy; win shifted to west at 10 a. m., the temperature increasing rapidly, and weather clearin up again until evening. Partly fair and cloudy weather during night. The baromete fell uninterruptedly throughout.

June 28.—Day opened warm and cloudy, with light easterly winds. Barometer falling. Light rain commenced at 6 a. m. and continued until 10.40 a. m., when th barometer began to rise and the wind shifted to the westward. Cloudy weathe during the afternoon, with high temperature and slowly-rising barometer. Clearin up toward evening—clear sky after 10 p. m. About 10.30 a. m. a frightful acciden occurred to Private William Seely, one of the assistants attached to this station. H was sliding down the track from the Waumback House (station No. 3) on a board when he was run into by Sergt. D. H. Sackett, who, being unable to control his board in consequence of the track being very slippery from the effects of a prevailing rain struck Seely's board with tremendous force. Seely was thrown forward on his head and, striking on the cross-ties, was fearfully mangled. Sergeant Sackett instantl summoned assistance, and through the kindness of Mr. Walter Aiken a train was a quickly as possible run to the place where the accident occurred, and Private Seel was conveyed to the railway-depot. It was not until 10 p. m. that a surgeon could b obtained, the wire to Littleton being down. On being apprised of this fact Sergean Sackett rode to Littleton and procured the services of Dr. Bugby. On examinatio Seely's injuries were found to consist of a fractured skull, his right leg broken abov the knee, his left ear torn off, and in addition the muscles of his chest and his vertebral column severely wrenched. As he was apparently suffering great pain, and required constant watching, by the advice of Dr. Bugby I consented to his removal t Littleton, where he could have proper nursing and medical attendance. Private Seel was unconscious up to the time of his removal, which took place on the morning o the 29th. Thanks are due to Mr. W. Aiken and employés of the Mount Washingto Railroad, also to Mr. Edward Cox and ladies, for kind and efficient help rendered th suffering man.

June 29.—Partly fair and cloudy weather, with very high temperature and ligh variable winds. Barometer fluctuating and rising slowly. The minute observation between 9 and 10 p. m. had to be dispensed with, as the office was being fitted up b Mr. Gates, of the Western Union Telegraph Company, and the barometer had to b taken down.

June 30.—Warm and cloudy weather throughout. Barometer rising slowly. Gentl southerly winds during the day, increasing to fresh at night. The instruments remained in good condition during the month, with the exception of three cups of th Daniells battery, which became leaky.

ROBERT SEYBOTH,
Observer-Sergeant, Signal-Service, United States Army.

Meteorological record for May 1, 1878.

Station No. 1.—Summit of Mount Washington. Elevation of barometer above sea-level .. 6,285.4 feet.
Station No. 2.—Above Jacob's Ladder. Elevation of barometer above sea-level............ 5,553.3 feet.
Station No. 3.—Waumbeck House. Elevation of barometer above sea-level................ 4,058.7 feet.
Station No. 4.—Base of Mount Washington. Elevation of barometer above sea-level..... 2,898.3 feet.

NOTE.—Barometer readings corrected for temperature and instrumental error only.

Meteorological record for June 3, 1873.

(Minute barometrical observations.)

Place of observation.	Time of observation.	Barometer.	Attached thermometer.	Corrected barometer.	Place of observation.	Time of observation.	Barometer.	Attached thermometer.	Corrected barometer. Station No. 1.—Summit of Mount Washington. Elevation of barometer above sea-level . 6,285.4 feet.
Station No. 2.—Above Jacob's Ladder. Elevation of barometer above sea-level.......... 5,553.3 feet.
Station No. 3.—Waumbeck House. Elevation of barometer above sea-level............... 4,058.7 feet.
Station No. 4.—Base of Mount Washington. Elevation of barometer above sea-level...... 2,898.3 feet.

NOTE.—Barometer-readings corrected for temperature and instrumental error only.

Meteorological record for June 7, 1873.

(Minute barometrical observations.)

Place of observation.	Time of observation. a. m.	Barometer.	Attached thermometer.	Corrected barometer.	Place of observation.	Time of observation. a. m.	Barometer.	Attached thermometer.
